# DC/DC Converters

*The Super Isolation People*

## The Total EMI-RFI Modular Shielding Concept

*Stevens-Arnold Pioneered the total EMI/RFI Shielding Concept in Ultra-Miniature Low Noise DC/DC Converter Modules 7 years ago.*

### WHY MODULAR PACKAGING?

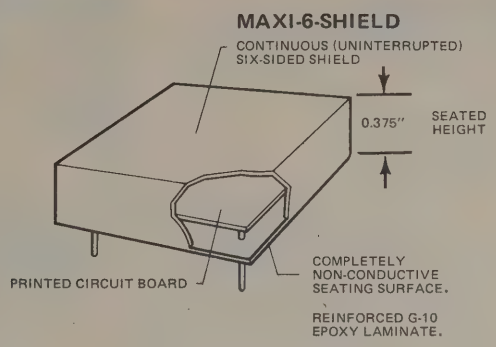
Modular packaging DC/DC Converter Circuitry in Shielded Encapsulated Modules, Significant Advantages are obtained in Noise Reduction, Noise Containment, Environmental Reliability and Minimal Field Service.

High Power Modules are Factory Repairable.

### WHY TOTAL MODULAR SHIELDING?

To Minimize Radiated Interference and Conducted Input/Output Noise we use ALL of the following Factors plus Careful Manufacturing to Produce a "Clean" DC/DC Converter.

1. Six Sided Continuous Package Shield
2. Multiple Transformer Shielding
3. A Full $\pi$ type Input Filter
4. Low Noise Circuit Design
5. Low Noise Transformer Design



### THE MAXI-6-SHIELD

The Maxi-6-Shield is a Continuous Six Sided EMI/RFI Package Shield.

The Module seating surface is a Non-Conductive Reinforced G-10 Epoxy Laminate.

There are no metal corners or edges to contact component side P.C. Ground Plane or wiring runs.

The Metal Cased Plug-in Modules have a Non-Conductive Flat Black Finish on the other 5 sides.

## DC/DC Converter Features

- 1 TO 50 WATTS
- ISOLATED — LOW NOISE
- SWITCHING FREQUENCY >20KHz (Inaudible)
- ALL REGULATED OUTPUTS:
  Short-Protected.
  +5V Std. O.V.P. (Internal)
- TOTAL EMI/RFI SHIELDING CONCEPT
  Continuous Six-sided package Shield
  Multiple Shielding
  $\pi$ type input Filter
- RELIABILITY
  100% Testing
  100 HR Burn-in at FL
  1 Year Warranty
  Hi-Power Modules Factory Repairable

*Exciting new converters! Next page.*

## How to Order DC/DC Converters

| Series | Nominal Input Voltage | | Number of Outputs | Output #1 Voltage | | Output #1 Current | | Package Configuration |
|---|---|---|---|---|---|---|---|---|
| SA | 12 | / | T (Triple) | 12 | / | 1000 | / | V |

EXAMPLE: 12VDC input. +12V, 1A +5V, 3A —5V, 500mA outputs

### CALL OUR APPLICATIONS ENGINEERING DEPARTMENT FOR:

- Free application engineering notes
- Comprehensive specification sheets
- Non-standard inputs up to 140VDC
- DC/DC power supply design-a-kit form 610 for special requirements

## *WE SPECIALIZE IN SPECIALS*

**A large part of our business consists of designing and building custom DC/DC supplies**

**Micropower and Beyond — Isolated . . . Regulated . . . Single or Multiple Outputs**

**LOW ENGINEERING COSTS . . . FAST TURN-AROUND**

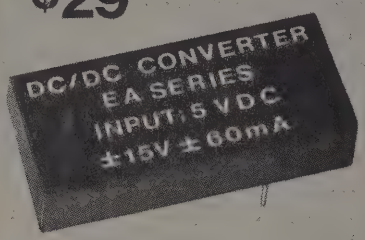
# DC/DC Converters

NEW

## Iso-Pak™

**$29** 1.8 Watts

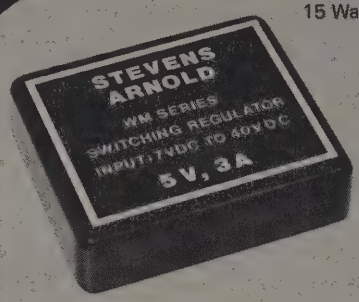


EA Series 1" x 2" x 0.375"H.

NEW

## Switch-Pak™

15 Watts

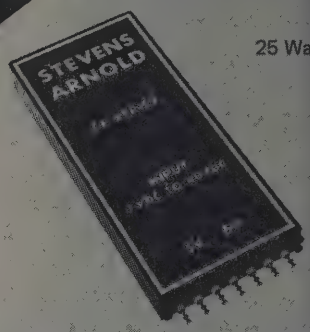


WM Series 2.56" x 3" x 0.75" H.

NEW

## Switch-Pa

25 Wat



CP Series 3.2" x 7" x 0.83"

## Small Package Big Value

Another first from the Originators of the 0.375" Low Profile

- A Break-through for Applications that were previously Cost prohibitive
- ±12V, ±60 MA Outputs also available
- May be used single ended as a 30V, 60 MA Supply
- Isolation; $1x10^9\Omega$/500 VDC minimum
- Regulation; ±0.5% (NL-FL)
- Non-Latching output Current Limiting
- 100,000 Hr. MTBF/Per 217 Handbook

$29 (1-9)

Request Data Sheet #603

## Economy Switching Regulator

Input: 7 VDC to 40 VDC

- 80% Efficiency
- ±1.0% Regulation from a 7 VDC to 40 VDC Input
- Expands the voltage-usable Range of low cost Dry Cells
- Reduces the charge-duty-cycle of 12V Rechargeable Cells
- Increases "Back Up Power" operating time in U.P.S. applications

5V, 2A $42 (1-9)

5V, 3A $52 (1-9)

Request Data Sheet #618

## Hi-Performance Switching Regulat

Input: 7 VDC to 40 VDC

- 80% Efficiency.
- ±0.5% Regulation
- Factory Repairable
- Total Shielding, Filtered & Clocked
- Output Parameters virtually constant over 7V to 40 VD input range

5V, 5A $149 (1-9)

Also Available: 5V, 10A

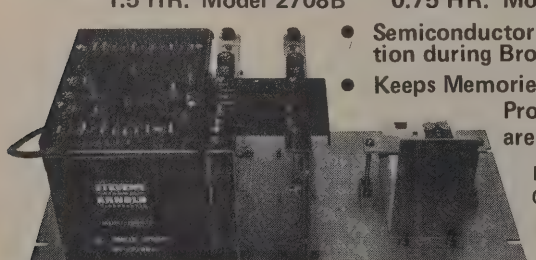
Request Data Sheet #617

## Mini-U.P.S. Helps System Memories Remember

Fully Self Contained — 7" depth behind a standard 8.75" rack panel with sealed Rechargeable Cell. Temperature compensated Charge Control and Limit Protection circuitry.

- Power for Ram's, Rom's, Up's, DTL, TTL, C-Mos etc.
- Will support 32K of MSV-11C Memory and refresh Logic

1.5 HR. Model 2708B 0.75 HR. Model 2708A



- Semiconductor Switching for Memory Retention during Brownout or Power Interruptions
- Keeps Memories up while "Unlimited Protection Time" AC generators are in the Start and Transfer cycle.

Input; 110/220 VAC; 50/60 Hz
Outputs: 5VDC, 3A 12 VDC, 1A

Prices Start at $395

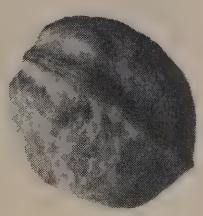
## Custom Built High Isolation Types

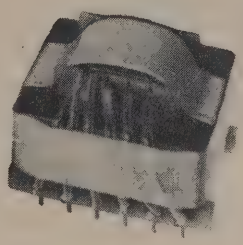
## Low Noise Shielded "Switcher" Transformers
### Switch-Tran™

he new Switch-Tran™ Hi-Frequency "Switcher" ransformers are an industrial extension of our UL-544 edical shielding techniques.

you are an OEM designing 20 KHZ, 30 KHZ or 50 HZ Switchers, you may be able to reduce your Noise id Filtering costs by using a shielded Switch-Tran™. sk for our IT-3649 Specifications and App. Note List-g. Prototype quantities are available to help you get our breadboard running. We can then build OEM quan-ties to your Specifications and delivery requirements.

200 Watts





IT-3649
20 KHZ

1.81" x 1.56" x 1.375"

## High Isolation Transformers
### Iso-Tran™

*FOR UL-544 MEDICAL AND LOW LEVEL INDUSTRIAL APPLICATIONS*

- ALL CORE TYPES
  Laminated, Toroid, Pot, C, E, etc.
- HI-BREAKDOWN VOLTAGE
  2500 VRMS up to 8000 VDC
- UL-544 THERMAL PROTECTION
  Incorporated Internally
- OEM DESIGNS FOR VDE STANDARDS
- LOW LEAKAGE CURRENT
  <1μA available
- UL-544 CONSTRUCTION
  Meets Para. 19 Requirements
- HIGH NOISE IMMUNITY
  Multiple shielding

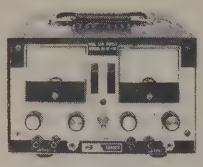
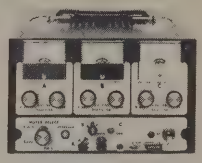
SYSTRON DONNER

# DC POWER SUPPLIES
## Product Guide & Price List

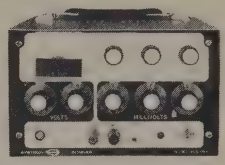
## Laboratory Power Supplies
## Manual & Computer Controlled



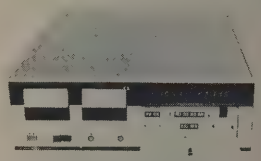
### Dual Lab
- Dual outputs—independently adjustable
- Serial or parallel operation
- Adjustable current limiting
- Two 40 watt supplies in a half rack case
- Load voltage regulated to 0.01%
- U.S. domestic price: $400



### Triple Lab
- Triple outputs—independently adjustable
- Overvoltage protected, 24 watt TTL supply
- Two 30 watt analog supplies (0-32 volts)
- Three metered supplies in a half-rack case
- Load voltage regulated to 0.02%
- U.S. domestic price: $375

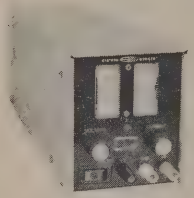


### Precision Lab
- Calibrated voltage in 1 millivolt steps
- Five decade dials and current vernier
- Remotely programmable by voltage or resistance
- Precision 50 watt supply in a half rack case
- Load voltage regulated to 0.001%
- U.S. domestic price: $450

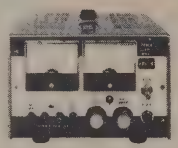


### Digital Power Source
- Bus controlled power per IEEE-488
- Two independent, bipolar outputs
- Programmable voltage, current, and overvoltage
- Two 50 watt supplies and interface in a 5" high rack chassis
- Resolution to 1 mV, regulation to 500 μV
- U.S. domestic price: $3000

## Wide-Range Bench & Rack Power Supplies
## Constant Voltage/Constant Current



### HHB Series
- 50 watt floating output power supplies
- Remote sensitivity and remote voltage programming
- Panel meters, overload and overvoltage protection
- Quarter rack chassis for bench or system
- Load voltage regulated to 0.005%
- U.S. domestic price: $375

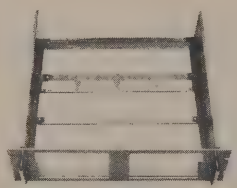


### HR Series
- 250 watt floating output power supplies
- Remote sensing and remote voltage programming
- Panel meters, overload and overvoltage protection
- Half rack chassis for bench or system
- Load voltage regulated to 0.01%
- U.S. domestic price: $550 to $700

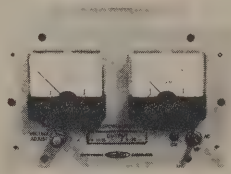
### RS Series
- 500 watt floating output power supplies
- Remote sensing, remote voltage programming
- Panel meters, overload and overvoltage protection
- Compact, 3½" high RETMA rack chassis
- Load voltage regulated to 0.01%
- U.S. domestic price: $750 to $850

### Mercury Series
- Choose from 1000 watt or 2000 watt models
- Remote sensing, remote programming
- Paralleling and tracking connections
- RETMA rack chassis: 5¼" and 7" high
- Load voltage regulated to 0.005%
- U.S. domestic price: $1100 to $2000

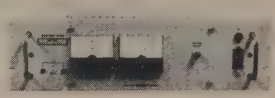
## Slot Range Systems Power Supplies
## Constant Voltage/Current Limiting



### Rack Adapters
- RPA-2 panel for two HR models
- RAC-1 rack adapter for HR models
- RAH-2 rack adapter for VPH models



### VPH Series
- 400 watt floating output power supplies
- Efficient, reliable design
- Panel meters, overload and overvoltage protection
- Compact half-rack chassis for systems
- Load voltage regulated to 0.02%
- U.S. domestic price: $595



### VP Series
- 1400 watt floating output power supplies
- Efficient, reliable design
- Panel meters, overload and overvoltage protection
- Housed in a 5¼" high RETMA chassis
- Load voltage regulated to 0.02%
- U.S. domestic price: $875

### VPL Series
- 2800 watt floating output power supplies
- Efficient, reliable design
- Panel meters, overload and overvoltage protection
- Housed in a 7" high RETMA chassis
- Load voltage regulated to 0.02%
- U.S. domestic price: $1675

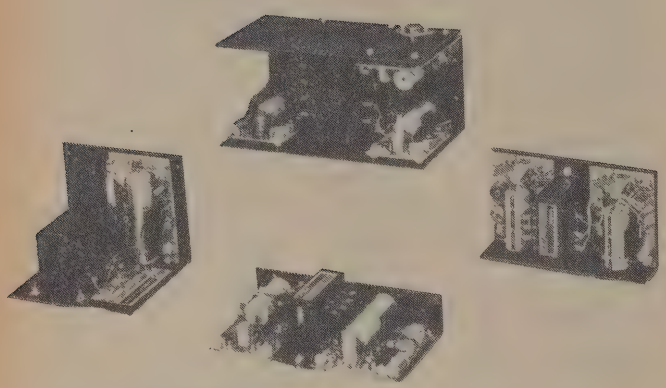
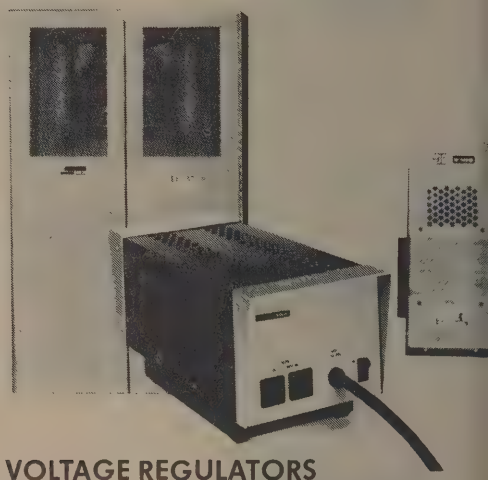
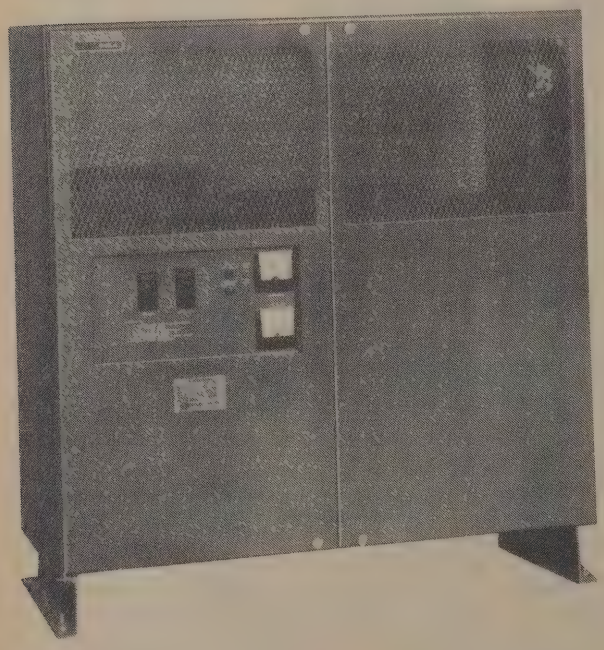
# Sola First in Voltage Regulation





**POWER SUPPLIES**
Sola can supply your needs. Single, dual and triple outputs. From microprocessors to the largest electronic equipment. Available off-the-shelf from your electronic distributor. Think of us as your supply line.

**VOLTAGE REGULATORS**
Sola . . . the #1 name in voltage regulation. From Constant Voltage Transformers to Minicomputer Regulators to our famous Solatron® Line Voltage Regulator for computers and industrial use. See what a difference clean power can make to the performance of your equipment.



**UNINTERRUPTIBLE POWER SOURCES**
Even under an extreme −20% brownout condition, the Sola UPS continues to provide regulated AC output while maintaining battery level. What's more, harmonic distortion is limited to an impressive 3% maximum.

When you consider uninterruptible power sources, consider one that also provides maximum brownout protection.

**FOR MORE INFORMATION**
See our Sales Representative listing in the EEM Yellow Pages. Or contact: Sola Electric, 1717 Busse Road, Elk Grove Village, Illinois 60007. Phone: (312) 439-2800.

**It's part of the Sola package.** GS SOLA ELECTRIC A UNIT OF GENERAL SIGNAL

# SEALED RECHARGEABLE BATTERIES

## Standard Cells and Batteries

**OUTSTANDING BENEFITS:**

**HIGH VALUE.** You get a high watt-hr. per dollar value because the materials used in Gates sealed lead-acid batteries are readily available and low in cost.

**LONG SERVICE LIFE.** You can get more than 600 deep discharge cycles . . . and even longer life when the battery is used as a standby . . . 8 to 10 years.

**PACKAGING FLEXIBILITY.** You get individual cell availability for broad flexibility in packaging, added flexibility because cells can be used in series or in parallel and may be operated, charged or stored in any position. You can select your choice of voltage and current.

**EASY RECHARGE.** You get the utmost versatility in the charging methods—constant voltage; modified constant voltage with tapering charge current; or constant current.

**WIDE RANGE OF DISCHARGE RATES.** You get the option of high discharge rates due to very low internal impedances — greater than 100 amps from the D cell, 500 amps from the X cell and 1,000 amps from the BC cell, are possible for short periods of time.

**WIDE TEMPERATURE RANGE FOR OPERATION.** You get the option of discharging Gates batteries over a wide range of temperatures, the capacity being a function of both temperature and discharge rate.

**SEALED CONSTRUCTION.** You get individual cells in a sealed case that prevents acid, water and acid vapor leakage. The rugged metal case also maximizes resistance to shock and vibration.

**LONG SHELF LIFE.** You get an exceptionally low self-discharge rate, 2½ years at room temperature.

**SAFETY.** You have virtually no problems with thermal runaway caused by overcharging.

### Cells

# ETERNACELL® LITHIUM PRIMARY BATTERIES

The lithium primary battery with organic electrolyte is the most significant improvement in battery technology in the past 25 years. Compared with all other primary battery types, the lithium system is markedly superior in every aspect of battery performance. The Power Conversion ETERNACELL is the first commercially available lithium primary battery.

**OUTSTANDING FEATURES:**

- 3.0 volts-per-cell nominal operating voltage (with adapter, single cell replaces 2 ordinary cells).
- Highest energy per unit weight and volume to 145WH-Hr./LB. 5-10 year shelf life
- Outstanding high and low-temperature performance–down to −65F and + up to +165F.
- 1/2AA, AA, C, 1-1/4C, D, 9V Transistor type to 30 A.H., . . . hermetically sealed cells available.

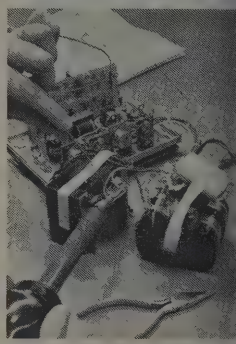
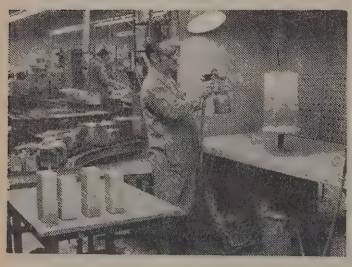
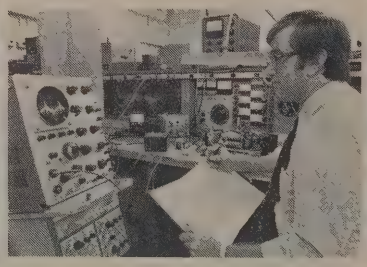
- High Efficiency AC-DC Switcher Series
- High Efficiency DC-DC Converter Series
- High Efficiency DC-AC Sine Wave Inverter Series







Technipower was founded on the principle of providing the system engineer with a reliable, practical and economical alternative to expensive custom-built or laboratory type power supplies. The concept developed by Technipower to accomplish this objective is to assemble and package the highest quality parts and materials into a standard module. In this way, the system engineer can specify precision regulated power by selecting a single part number as he would a component. Costly software documentation and servicing logistics are kept to a minimum. No elaborate parts lists or expensive servicing manuals are required. □ From design through production, every stage in the making of power supplies is done in-house at the modern complex in Danbury, Connecticut. The comprehensive Technipower design/data catalog provides a large range of models from which the designer can select the exact power supply required. Complete details, including specifications, application data and model capabilities are provided. Our staff of expert power supply engineers is available to assist the equipment designer in catalog module modification or in custom designing.

**All Technipower Power Modules Are Backed By A Full 5-Year Warranty**

# Tecnetics' broad range of power converters, the stepping stones to your product's success

Whether you are designing military hardware, space vehicles, communication equipment or other high technology products, the components you select can mean the difference between success or failure in the final product. That's why more and more design engineers are finding the power converters they need in the Tecnetics catalog.

Tecnetics offers the broadest range of state of the art DC-DC power converters, and we are now extending our expertise into 400 Hz power supplies. We have been developing and refining these products since 1959, so that today each one is unsurpassed in terms of efficiency, reliability, control circuitry and documentation.

The nearly one-thousand products in our catalog give the design engineer a wide choice of options and features including:

• Efficiencies up to 86% • MTBF up to 40,000 hrs. • Single, dual and triple outputs • Remote error sensing • Densities up to 1.65 watts per cubic inch • EMI protection • Mil spec environmental protection • Short circuit and overload protection • Input-output isolation.

Send for our catalog today. You're sure to find a stepping stone to your product's success.

# Eveready® wants you to know

## how to choose the right battery for the right job, at the right price

### CARBON ZINC

OUR "GOOD" BATTERY FOR OCCASIONAL GENERAL PURPOSE AND TRANSISTOR USE

- Our lowest price battery family
- Variety of shapes and sizes
- Provides from 1.5 volts to 510 volts
- Good shelf life
- Voltage drops gradually with use

APPLICATIONS

**Low to medium periodic power needs or occasional use.** Radios, flashlights, lanterns, fluorescent lanterns, video games, small lighted toys and novelties, cameras, flashguns, high voltage electronic photoflash, barricade flashers, lighting and alarm systems, electric fence controllers, laboratory instruments, telephone amplifiers, marine depth finders, paging and signaling devices, R/C models.

### HEAVY DUTY (Zinc Chloride)

OUR "BETTER" BATTERY FOR HEAVY DUTY USE

- Intermediate price
- Variety of shapes and sizes
- Provides 1.5 Volts, 6 Volts, or 9 Volts
- Good shelf life
- "Better" voltage maintenance under load than General Purpose Batteries
- "Better" low temperature characteristics than General Purpose Batteries

APPLICATIONS

**Medium to heavy current or regular use.** Flashlights, lanterns, fluorescent lanterns, calculators, radios, motor driven toys, portable tape recorders and players, video games, motor driven devices, communication equipment, cameras.

### ALKALINE MANGANESE (Primary-Secondary)

OUR "BEST," LONGEST LASTING ALL PURPOSE POWER SOURCE

PRIMARY

- Premium Price
- Variety of shapes and sizes
- Provides 1.5 Volts, 3 Volts, 4.5 Volts, 6 Volts and 9 Volts
- "Best" shelf life — outlasts Carbon-Zinc and Heavy Duty
- "Best" voltage maintenance under load
- "Best" low temperature characteristics

SECONDARY

- Rechargeable Battery at lowest price
- Up to 50 cycles at controlled depth of discharge
- Provides 4.5 Volts, 6 Volts, 7.5 Volts, 13.5 Volts

APPLICATIONS

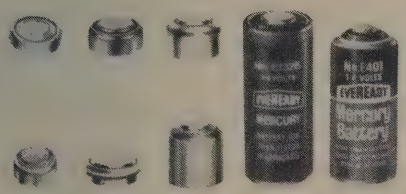
**Heavy current or continuous use.** Electronic photoflash, movie cameras, still cameras and motor drives, motor toys, portable tape recorders and players, calculators, smoke detectors, shavers, television sets, portable communication systems, motor driven devices, medical instruments, signal lights.

# Recommend the right EVEREADY® battery for the right job

## "EVEREADY" BATTERY SYSTEMS AND THEIR PROMINENT FEATURES

. . . FROM THE MANUFACTURER OF THE MOST COMPLETE DRY BATTERY LINE IN THE WORLD

## MINIATURE ALKALINE (Silver Oxide, Mercuric Oxide)



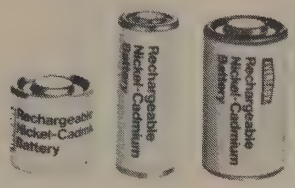
HIGH ENERGY DENSITY MINIATURE POWER SOURCE

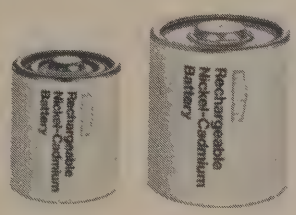
- Variety of shapes and sizes
- Provides 1.35 Volts to 12.6 Volts
- "Best" shelf life — outlasts Carbon-Zinc
- "Best" voltage maintenance under load
- "Good" low temperature characteristic
- Exceptional sealing

APPLICATIONS

**Miniature battery powered electronic equipment.** LCD, LED, or Analog electronic watches, hearing aids, calculators, cameras, electronic thermometers, miniature radios, medical instruments, wireless microphones, paging devices, test instruments.

## NICKEL-CADMIUM RECHARGEABLE (High Rate and Fast Charge Types)





OUR "BEST" RECHARGEABLE POWER SOURCE

- Premium price
- Variety of shapes and sizes
- Standard voltages 1.2 Volts to 14.4 Volts
- Custom batteries available
- Good high and low temperature performance
- High rate discharge
- Long cycle life
- Fast Charge types available
- Consumer cells and chargers available

APPLICATIONS

**Rechargeable devices, standby power and replacement cells for high usage devices.** Portable tools and appliances, electronic photoflash, calculators, tape recorders, and dictating equipment, toys, R/C models, electronic memory standby power, timer standby power, alarm systems, professional communication and recording equipment.

"Eveready," "Energizer," Cat with "Nine Lives," "Mini-Max," "Hot Shot," "Columbia," and "Gray Label" are trademarks of

Sales Offices: Atlanta, Chicago, Cleveland, Dallas, San Francisco, Hackensack, N.J.

Union Carbide Corporation provides a consulting service of experienced battery engineers as an aid to manufacturers in need of special battery designs. For help with your specific battery problems, call (212) 551-3833 or write Battery Engineering Dept. No. 18 in New York (address shown on this page).

# ADJUSTABLE HIGH VOLTAGE DC POWER SUPPLIES

## VOLTAGE RANGES TO 2,000,000 VOLTS DC

BA 70-10 ADJUSTABLE HIGH VOLTAGE DC POWER SUPPLIES
BA 70-11 EXTRA HIGH VOLTAGE DC POWER SUPPLIES
BA 70-13 MULTI-RANGE, HIGH VOLTAGE POWER SUPPLIES
BPE 70-5 HIGH VOLTAGE DC POWER PACKS ENCAPSULATED
BPO 70-5 HIGH VOLTAGE DC POWER PACKS OIL IMMERSED

Series "BA" adjustable power supplies and series "BP" power packs are available at voltage ratings from 1 KVDC through 2000 KVDC at output power ratings from 1 watt to 250 kilowatts continuous. The adjustable series includes applications oriented control features and package design. The power pack series has many applications in OEM systems and for general laboratory use.

☐ **CONSERVATIVELY RATED — HIGH RELIABILITY**

Every UVC power supply includes conservatively rated high voltage components designed and manufactured under the strict control of the specialized UVC technical staff to insure continuous duty, long term, trouble free operation.

Each power supply offers a standard ripple specification of 5% maximum or better. Optional filters and attenuators are available for every UVC supply to reduce ripple to as low as .01% rms.

☐ **REVERSIBLE POLARITY**

Each power supply offers the flexibility of reversible output polarity performance.

☐ **FULLY SELF-PROTECTING**

Overvoltage and overcurrent protection features are available as both adjustable range and fixed value circuits. All access areas and doors are interlocked for personnel protection and all energy storage components and circuits are discharge protected for personnel protection.

☐ **"APPLICATIONS ORIENTED" CONTROLS OPTIONAL**

Rack mounted, floor and bench operable as well as portable design are among the packages available for UVC standard high voltage power supplies.

☐ **12-MONTHS WARRANTY**

A one year factory backed and field supported warranty policy accompanies each shipment.

# HIGH VOLTAGE TERMINATIONS

C70-7 HIGH VOLTAGE TERMINATIONS

☐ **CORONA-FREE TERMINATIONS**
☐ **ELIMINATES THE HIGH STRESS POINTS**
☐ **MORE LINEAR DISTRIBUTION OF VOLTAGE GRADIENTS**

UVC high voltage terminations and connection links have been designed and fabricated specifically for use in high voltage applications requiring careful attention to terminal and connection problems • The standard terminations have been manufactured in a variety of geometrical configurations which have been chosen for their well-defined corona and leakage onset characteristics • Accurate machining and polishing, along with adequate theoretical and field experience on these terminals have given UVC the ability to advise on a particular size, shape or spacing for a particular application or site condition.

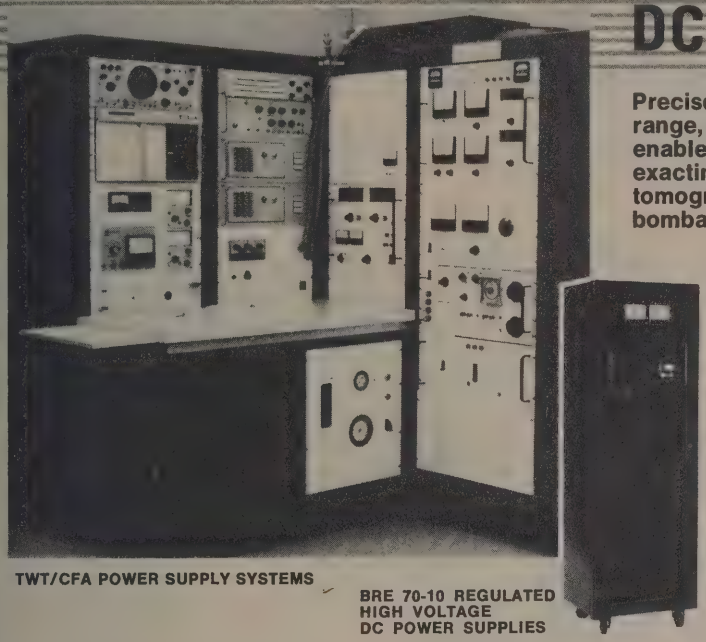
# PRECISION REGULATED HIGH VOLTAGE DC POWER SUPPLIES



TWT/CFA POWER SUPPLY SYSTEMS

BRE 70-10 REGULATED HIGH VOLTAGE DC POWER SUPPLIES

**Precisely regulated performance over wide adjustment range, low ripple, fast response and high stability enable the series "BRE" power supplies to be used in exacting work for X-Ray Spectroscopy, computerized tomography, electron microscopes, TWT's, ion bombardment experiments, particle separators.**

☐ **FROM 1KV THROUGH 500 KVDC**

These precisely regulated power supplies are available in voltage ratings from 1 KV through 500 KVDC at continuous duty output power up to 100 KW. Our regulation circuitry techniques realize performance specifications which are virtually independent of input line variations or no load-full load changes.

☐ **LOW RIPPLE . . . HIGH STABILITY**

Ripple in most cases is 0.01% rms and the output polarity is available as both fixed and reversible. Two voltage adjustment schemes are offered, namely digital dialable control for the most exacting applications and continuous coarse and vernier controls.

☐ **WIDE ADJUSTMENT RANGE**

In the digital dialable scheme, we allow for adjustment in increments of 10 KV, 1 KV, 100 volts, 10 volts, 1 volt and 0-1 volt vernier. This system provides the assurance that the actual output is always within 1% of the dial readings. As indicated you may select a coarse, and vernier voltage adjustment scheme and realize economic savings without sacrificing basic regulated performance. Regulation accuracy of ± 0.25%; ± 0.1%; ± 0.05% and ± 0.01% for line or load changes is available on most series "BRE" power supplies.

☐ **TWT/CFA POWER SUPPLY SYSTEMS**

Available with Cathode, Heater, Collector, Anode and Helix outputs. Each UVC Black Box system features:

- **PULSED OR CW OPERATION**
- **TURN ON/OFF SEQUENCE CONTROL TO INSURE SAFE AND PROPER PERFORMANCE**
- **FAST-ACTING CROWBAR PROTECTION**

You can forget about power problems when you marry your TWT's to UVC Black Boxes.

# HIGH VOLTAGE DIVIDERS

C70-8 HIGH VOLTAGE DIVIDERS

UVC offers five types of voltage dividers for measurement of various types and shapes of high voltages. These include Resistive, Capacitive, Mixed (Resistive-Capacitive), Impulse Resistive, Impulse Capacitive. Selection of a voltage divider type depends upon the shape of measured voltage and the kind of information required.

These dividers may also be used for measurement and/or sensing of special high voltage transients. They are optimized in such a way as to drain a minimum of power from the voltage source and can be placed within close proximity to grounded objects without significant interferences on the divider ratio.

The low voltage components are enclosed in the bottom cylinder, which is made of steel for the purpose of shielding. The BNC connector for connections of instruments and the attenuating switch are mounted directly on the steel cylinder. High voltage components are enclosed in phenolic type cylinders. Specially designed high voltage terminals facilitate high voltage connections.

# CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
# DER PRODUKTKATALOG FÜR ELEKTRONIKER
# ELECTRONIC ENGINEERS CATALOGUE

**The 1978 edition is out...and the response is in...**
**IMMEDIATE AND OVERWHELMING**

ACCEPTANCE

The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to—and from—Western Europe.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 product headings & cross-references alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

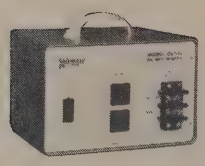
# POWER CONVERSION EQUIPMENT

## DC-TO-AC INVERTERS . . . UPS/STANDBY POWER

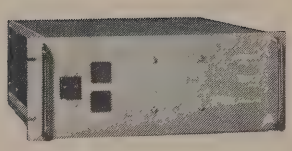


### MODEL 1057 300-WATT STEPPED-WAVE INVERTER

Economically priced and ideally suited for instruments requiring frequency stability, the 300-watt Mode 1057 is an inexpensive alternative to sine-wave power. The switching-mode wave-shaping techniqu yields a three-level-step waveshape which has approximately the same peak-to-rms voltage ratio as true sine wave. Versions for input voltages of 12 Vdc, 24 Vdc, 28 Vdc and 32 Vdc are standard. Output of 115 Vac or 230 Vac and 50 Hz or 60 Hz are also standard. All models are more than 80% efficien and have a frequency stability of ±0.25%. Units are 8¼"h x 11"w x 8½"d and weigh 25 lbs Single piece price is $295.00 for all versions. For more detailed specifications request Bulletin 9091C

### MODEL 1172 500-WATT SQUARE-WAVE INVERTER

The Model 1172 is an inexpensive, rugged 500-watt inverter designed to power heavy duty loads. The inverter will provide 1000 watts for a short period of time for surge-demanding loads such as refrigera tor compressors and small power tools. The Model 1172 is a modular inverter and two units may be easily paralleled in the field for added continuous and surge power. Versions for input voltages of 12 Vdc 24 Vdc and 32 Vdc are standard. Outputs of 115 Vac or 230 Vac and 50 Hz or 60 Hz are also standard This square-wave-output inverter is more than 80% efficient for most of the output load range. The frequency stability is ±2 Hz and the output voltage is proportional to the input dc line. All units are 7"h x 8½"w x 11"d and weigh 32 lbs. The price of the twelve-volt-input version is $225.00, while the 24-V and 32-V versions are $280.00 each. For more detailed specifications request Bulletin 1101A



### MODEL 1081 500-WATT SINE-WAVE INVERTER

Designed to power those loads that are extremely wave-shape and frequency sensitive, the Model 108 inverter offers a well-filtered sine wave with a frequency stability of ±0.25% and a voltage regulatio of ±2% with line, load and temperature. Standard input voltages are 12 Vdc, 24 Vdc, 48 Vdc and 120 Vdc. The output for all versions is 115 Vac at 60 Hz. All units are for mounting in a standard 19" rack and measure 6¾"h and 20½"d. All units weigh approximately 100 lbs. The single piece price fo the Model 1081 is $995.00. For more detailed information request Bulletin 9091C.

### OTHER STANDARD INVERTERS

Wilmore Electronics manufactures a complete line of solid-state inverters ranging in output power fror 15 watts to 1500 watts. These units include highly efficient and economical square-wave-output units, units whose output wave shape is a three-level-step approximation to a sine wave and, for the mos demanding loads, low-distortion sine wave output units. Pictured is the 1500 watt Model 1207, availabl in input voltages up to 120 Vdc, providing a frequency-stable, single-phase 60 Hz output at either 11 Vac or 230 Vac. All standard Wilmore inverters are protected against overloads and short circuits. Fo information about other standard inverters or about a custom-designed inverter to meet a particula requirement, please contact our sales department or our applications engineering group.

### MODEL 1252 AUTOMATIC STANDBY AC POWER SOURCE

When commercial ac power fails, this standby ac power source continues to supply needed power t critical loads by switching to inverter operation. Upon restoration of ac power, the Model 1252 aut matically returns to normal operation, and the internal battery charger recharges the batteries. Tw basic versions are available, one providing a stepped-wave approximation to a sine wave output ar 250 watts of power and the other supplying 500 watts of square-wave power. Standard battery inp voltages are 12 Vdc and 24 Vdc. All units are 5¼"h x 17"w x 14"d and weigh 45 lbs. Single piece pric is $525.00. Battery not included. For more detailed information request Bulletin 6021.

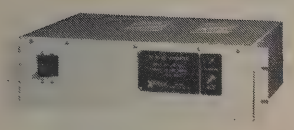
# POWER CONVERSION EQUIPMENT

## SINGLE- AND MULTIPLE-OUTPUT DC-TO-DC CONVERTERS

### MODEL 1265 48-V AND 24-V TO 13-V DC-TO-DC CONVERTERS

The Model 1265, capable of delivering 420 watts, is a highly efficient, rugged converter which has been used in a variety of applications including that of providing power for mobile-radio base stations that are located where battery voltages other than 12 Vdc are available. The Model 1265 is particularly well-suited for applications in which extended periods of "standby" service are encountered because of the minimal no-load power required, less than 5 watts. These units are well regulated and fully protected and isolated. Units are 5¼"h x 19"w x 12"d and weigh 15 lbs. Price in quantity of ten is $470.00 each. For more detailed specifications request Bulletin 5061.

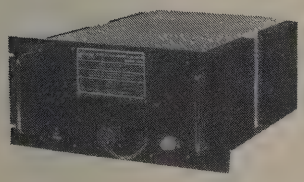


### SERIES 1240 DC-TO-DC CONVERTERS

The Series 1240 converters are designed to take power from standard station batteries at 48V, 125V or 250V and convert to output voltages ranging from 24 Vdc to 125 Vdc. These converters are highly efficient up to 87% for some models, and are fully protected against large input transients as well as short circuits and overloads. Typical applications include uses within the utilities industries, with supervisory control systems and to power alarm and security systems. There are sixteen standard models with output power ranging from 240 watts to 600 watts. All models are 5¼"h x 19"w x 14"d and weigh approximately 40 lbs. Prices in quantity of ten begin at $580.00. For more information request Bulletin 4011.

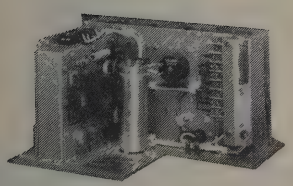
### MULTIPLE-OUTPUT DC-TO-DC CONVERTERS

Wilmore specializes in both standard and custom multiple-output dc-to-dc converters. One example, pictured at the left, is a Series 1260 converter. This series accepts standard input voltages of 24V, 48V or 125V and offers dual, triple or quadruple outputs at all standard output voltages such as 5V, ±12V, ±15V, etc. The combined output power capability of this series is 250 watts, available in almost any combination of voltages and current levels. Standard enclosures are 5¼"h x 19"w for rack mounting, but the modular design allows for considerable flexibility in packaging. For information about these converters or other multiple-output converters, please contact our applications engineering department.



### MODEL 1254 STANDARD CAPACITOR-CHARGING CONVERTER

Intended for use with lasers, flash lamps and other pulsed-load systems, these dc-input power converters are designed to charge energy-storage capacitors repetitively to a precisely regulated peak voltage. Special advantages of these converters include an overall efficiency of approximately 70%, a peak-voltage regulation precision of better than ±0.5%, and the ability to be used with essentially any size of load capacitor and with pulse-discharge repetition rates ranging from zero to several hundred pulses per second. There are three standard versions of the Model 1254 with energy delivery rates of 300, 600 and 1200 joules per second. The standard input voltage range is 20-32 Vdc and outputs are available in three standard ranges from 450 volts to 2800 volts. The Model 1254 units are intended for mounting in a standard 19" rack; smaller, lighter, higher-efficiency units are available for military (and similar) applications. The Model 1254-1200 (pictured at left) measures 8¾"h x 20"d and weighs 35 lbs. Single piece prices begin at $940.00 for the Model 1254-300. For additional information request Bulletin 6031.



### CUSTOM-DESIGNED POWER CONDITIONING EQUIPMENT

Because user's needs tend to be highly individualized, the majority of Wilmore's manufacturing involves custom, rather than standard, units. Engineering charges for custom units are modest; turn-around times are exceedingly short. Especially if you are an OEM, a custom unit can probably save you money by ensuring that you get exactly what you want but no more, by ensuring that you have thermal and electronic safety margins where you need them, and by being carefully integrated in numerous other ways with the overall electrical and mechanical planning for your product. Wilmore's custom-designed converters are serving throughout the world in both industrial and aerospace applications. Uses range from spacecraft (LES-6, OSO, IMP, SAS, Pioneer 10 & 11 to name a few) to providing power conversion for the communications system for the Trans-Alaskan Pipeline. We would like to bring our cost-reducing problem-solving experience to bear on your problems.

# ACDCo *Power WHERE you need it!*

## Inverters-Uninterruptible Power Systems -Battery Chargers-Frequency Changers-Power Supplies

ACDCo Power Equipment is designed to meet high reliability and performance standards providing maximum life with minimum maintenance to protect all system circuits that require dependable, high quality power.

### HARDWARE

**Inverters, Power — DC to AC Output:** Fixed-base, portable, mobile and marine.

**ACDCo INVERTERS** are used in one of the **roughest** of Marine Environments on the **U.S. Coast Guard's - Rescue Life Boats** to power their Navigation and Communication equipment.

**Uninterruptible AC Power Systems:** 36 VA to 5 KVA.

**Frequency Converters — AC to AC:** 50/60 Hz, 60/50 Hz, 50/400 Hz and 60/400 Hz.

**Battery Chargers — AC to DC Power Supply:** 0-30 VDC/30-300 VDC Auctioneer Units and Automatic Transfer.

**Power Supplies:** Constant current and constant voltage current regulated and modular.

**Power Monitors (AC & DC) & Fault Detectors:** Special & custom power analizing, monitoring & recording systems, & controls.

### TYPICAL SPECIFICATIONS

**Input:** ±15% from nominal.

**Output:** Sine wave, 120 Volts RMS, 60 Hz.

**Voltage Regulation:** 2% over full input and load range.

**Frequency Regulation:** 1% over full input and load range.

**Power Factor:** .9 Lead to .8 Lag.

**Efficiency:** Over 80% at nominal input.

**Distortion:** Less than 5%.

**Overload:** Within specifications for ONE MINUTE at 140% load.

**Overload Protection:** No damage from short to open circuit, reversal of input, or input voltage to 140% nominal.

### DESIGN FEATURES

Ruggedized construction, no moving parts, completely solid state, easy servicing — sides fold down, plug-in transistors and I/C's on Printed Circuit Boards, all P/C boards plug-in removable.

# ACDCo Power WHEN you need it!

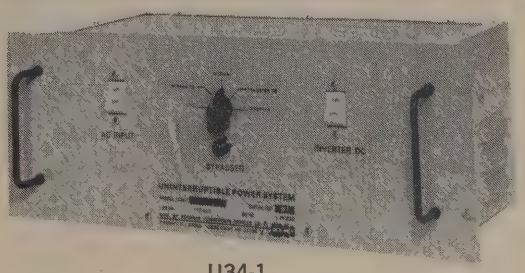
## Protect Against Costly Power Interruptions

ACDCo Uninterruptible Power Systems protect critical circuits for computer peripherals, process controls, telephone switch boards, high risk medical or experimental procedures and all systems requiring dependable emergency power when normal AC is lost.

### UNINTERRUPTIBLE POWER SYSTEMS

Your margin of safety to insure continuous high quality power even in the event of any utility line or generator power fluctuation or failure. ACDCo's UPS systems are designed to provide full output capacity even under "brownout" conditions where voltage reductions as severe as 15% are encountered. The reserve (battery back-up) for power outages is not diminished by extended operation in brownout conditions.

The use of power transistors rather than SCR's in the inverter greatly reduces the susceptibility to transients which can be present on power lines due to faults, switchovers, lightning and other factors. These transients usually cause the problems that the UPS was intended to protect. If the inverter can malfunction as a result of the transient, then the expected protection is absent when it is most needed.



U34-1

**Typical UPS Model U34-1** is used to power a critical liquid hydrogen temperature control system at a major government research nuclear reactor.

### DESIGN FEATURES

- **Ruggedized construction**
- **Easy servicing**
- **Plug-in Transistors and I/C's**
- **Removable P/C Boards**
- **Optimized design to provide maximum value for the procurement dollar**

## DC TO AC UNIVERSAL INVERTERS

*Frequency Stable with Automatic Frequency Control.*

**New, universal inverters for operating 110V, 60 cycle AC equipment from DC voltages in autos, buses, trucks, boats, trains, planes and DC districts. Designed especially for standard 110 VAC tape recorders, TV sets, radios, PA systems, electric razors, test equipment, etc.** Units are carefully engineered and ruggedly constructed to provide long life operation. All feature complete RF interference suppression and exceptional frequency stability. Have operating efficiency in excess of 75%. Four-point voltage regulator corrects output voltage for minimum and maximum loads, and also helps compensate for input voltages lower or higher than normal. Inverters are recommended for use with loads having power factors in excess of 70%. Built-in toggle switch selects most efficient operation for use with TV sets or tape recorders. Inverters are not recommended for use with large motor driven appliances such as refrigerators, washing machines, etc. All have On-Off switches. Housed in attractive brown hammerloid metal cabinet with convenient leather carrying strap. Sizes: Standard Model RSF, 8½x9⅞x5¼"; Heavy-Duty Model RHG, 6⅞x11¼x 8½"; Extra-Heavy-Duty Model HSJ, 6½x12⅞x8¼". With battery cables for instant connection to power source. Models with "P" suffix equipped with adapter cord for use in auto cigarette lighter receptacles.

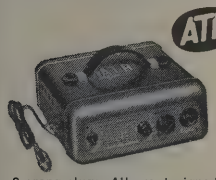
*Recommended for 24V battery operation. **Before ordering, check wattage of equipment with which inverter will be used.**



## PORTABLE PLUG-IN TYPE INVERTERS — DC TO AC

*Frequency Stable with Automatic Frequency Control.*

**Specially Designed for Operating Standard AC Dictating Machines, Record Players, Incandescent Lamps, Electric Razors, Electronic Test Equipment, and other Small Electrical and Electronic Devices from DC Voltages in Automobiles, Buses, Trucks, Boats, Planes, Trains, and DC Districts.**
Lightweight inverters for operating 110 VAC equipment from DC voltage sources. Feature excellent frequency stability and high efficiency. 12V units plug into cigarette lighter receptacle of any vehicle; others are equipped with standard 2-prong plugs. All are designed especially for use with dictating machines; record players, electric razors, test equipment, etc. Not recommended for large tape recorders and motor driven appliances such as refrigerators, washing machines, etc. Brown Hammerloid case with leather carrying strap. Sizes: DME, 5¼x4¾x2¾"; RME & RMF, 8⅜x8x3¾".

*Recommended for 24V operation. **Check wattage rating of equipment before ordering. RME Model Inverters equipped with voltage regulator.**
†**This Inverter specially designed and recommended also for use with portable TV set.**

## ± SOLID STATE INVERTERS — DC TO AC

*Frequency Stable with Automatic Frequency Control.*

**Specially Designed to Provide 117V 60 Cycle AC Power for the Operation of Tape Recorders, VTR Equipment, Public Address Systems, TV Sets, Ham Gear, Small Portable Tools and Appliances, Test Instruments, Closed Circuit TV, Scientific Laboratory and Hospital Equipment, Small AC-DC Universal Motors, Fluorescent and Incandescent Lamps from 12 VDC Storage Battery Power in Automobiles, Buses, Trucks, Campers, Motor Homes, Boats, and Aircraft.**
ATR SOLID STATE Inverters are Universal Type Inverters recommended for the applications as listed above plus hundreds more! These Inverters are very well filtered and feature quick starting, frequency stability with varying load and input voltage, rugged heavy-duty construction, reverse polarity protection, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated here are equipped with heavy duty power transistors and plug-in oscillator for automatic frequency control. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is approximately 80%. To figure approximate current consumption from storage battery, divide the rated input wattage of the load being operated by the storage battery voltage, and further divide this answer by .80 which will give the approximate current consumption from the battery based on the actual load being operated. These Inverters are recommended primarily for use with loads having power factors in excess of 70%. **Inverters come complete with battery cables ready for operation.**

| Mfr's Type | DC Input (Volts) | AC Output 60 Cycles (Volts) | Output Wattage Int. | Output Wattage Cont. | Shipping Wt. (Lbs.) | Net Price |

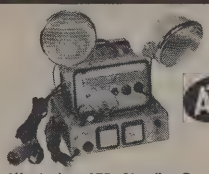
*"-P" model is equipped with cigarette lighter cord set to plug into dash receptacle. Caution — Do not load beyond 150 watts due to possible damage to cigarette receptacle wiring.
±**Inverters equipped with Solid State Oscillator.**
Dimensions of Model 12U-S3A, 11x9x4". Dimensions of Model 12U-S5G, 11x9¾x5¼". Dimensions of Model 12U-S6M or 12U-S9M, 11x11¼x6¾".

**All ATR Inverters are housed in attractively finished brown-hammerloid metal cabinets and are complete with battery cables ready for operation.**

**Note Carefully: ATR Inverters are not recommended for the operation of refrigerators, washing machines, or similar motor-driven appliances; also, ATR Inverters are not recommended for operating toasters, electric irons, sun lamps, or similar appliances of high wattage or low power factor. Any attempt to use the Inverter for applications not recommended will ruin the Inverter immediately and void the guarantee.**



## STANDBY POWER SYSTEMS FOR EMERGENCY LIGHTING AND POWER

**Illustrates ATR Standby Power System complete with lamps, automatic crossover, and battery charger.**
Completely Automatic Standby Power Units specially designed to permit the instantaneous continued operation of critical lighting equipment, PA systems, amplifiers, intercom systems, burglar alarms, fire alarms, synchronous electric clocks, electric time and recording clocks, incubators, gas valves, telephone and test equipment, and similar critical devices in the event of 115 volt AC commercial power line failure. For use: In hospitals, banks, hotels, theatres, factories, office buildings, schools, homes and other areas of operation.

| Type | Storage Battery Input (Volts) | AC Output 60 Cyc. (Volts) | Output Wattage Int. | Output Wattage Cont. | Shipping Wt. (lbs.) | Net Price Without Lamps |

†Solid State type. ‡Vibrator type.
For Units with Lamps add **$49.61** additional Net.

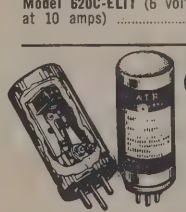
All Models designated above are housed in attractively finished brown-hammerloid metal cabinets. Dimensions of all Models **without lamps** are as follows: ETS, 11"Wx11¾"Dx9"H; ETH, 11"Wx11¾"Dx 11"H; ETJ, 11"Wx13"Dx12½"H;S3A, 11"Wx11¾"Dx 7¾"H; S5G, 11"Wx11¾"Dx9"H: S6M, 11"Wx11¾"D x11"H. For units with Lamps, change W to 16" and add 7½" to H; also increase shipping weight by 5 lbs.

## SHAV-PAKS

Every man should have this lightweight ATR Inverter in his car for that "Keep Clean-Shaved Look." Will operate standard AC electric shavers and other small electrical devices from your car or boat. Complete with 3 ft. cord set. Plugs into cigarette lighter receptacle. Fuse protected, rugged construction, and attractively housed in grey hammerloid-finish steel case. Input: 12 VDC. Output: 110 VAC. 60 cycles, 15-25 watts. Size: 4x2⅝x2¾". Ship. wt., 2½ lbs.
**Model 12-SPB** ..... Net **$22.75**

## BATTERY ELIMINATOR & CHARGER

**For Demonstrating and Testing Transistor or Vibrator-Type Auto Radios. Ideal as a Power Supply for Model Railroad Trains, Radio Sets, Electro Plating Outfits, and other 6 or 12 VDC Equipment. May also be used as a Battery Charger.** Designed for testing DC electrical apparatus on regular 110 VAC lines — equipped with full-wave solid state rectifier, assuring noiseless, interference-free operation. Fully automatic and fool-proof; has voltmeter, ammeter, and 8-position voltage control. Fuse protected and housed in heavy gauge brown hammerloid-finish metal case. 6 ft. cord set included. Size: Model 610C-ELIF, 6½x8⅛x 8½", ship. wt., 22 lbs.; Model 620C-ELIT, 6½x12⅞x 8½", ship. wt., 33 lbs.
**Model 610C-ELIF** (6 volt at 10 amps or 12 volt at 6 amps) ..... Net **$90.75**
**Model 620C-ELIT** (6 volt at 20 amps or 12 volt at 10 amps) ..... Net **120.70**



## VIBRATORS

**For All Auto Radio Sets Since 1954 Use One of the ATR Vibrators Listed Below.**

**ATR Vibrators Feature:** Ceramic Stack Spacers with two-bolt stack construction. Instant Starting—as a result of highly efficient magnetic circuit with formed base for more uniform operation on both high and low voltages. Large Oversize Tungsten Contacts having Full Wiping Action — for greater reliability and longer life. Perforated Reed of Highest Quality Swedish Spring Steel. Highest Precision Construction and Workmanship.

Ship. Wt., ½ lb.
**ATR No. 1400** (Bulk), 4 Prong, 6 Volt. Net **$5.95**
**ATR No. 1843** (Bulk), 3 Prong, 12 Volt. Net **5.95**
**ATR No. 1840** (Bulk), 4 Prong, 12 Volt. Net **5.95**

**Vibrators: ATR manufactures many different styles and types of light-duty and heavy-duty vibrators. If you have a requirement, give all available information including manufacturer and vibrator type number and then request availability and price information.**

| DA-500S | 22-30 | 500 | 50 or 60 | 115(1) | 130 | 10½" | 15" |

(1) 230 Volt Available (2) For 50 Hz, add about 5 lbs.

## FREQUENCY CHANGERS

(Meters optional)

| Model | Input VAC. ±10% | Input Freq. Hz | Output VA | Output Freq. Hz | Output Volt | Wt. Lbs. (2) | Dimensions (For 19" Rack) H | Dimensions (For 19" Rack) D |
|---|---|---|---|---|---|---|---|---|
| ADA-100S | 115/230 | 45-65 | 100 | 50 or 60 | 115 | 75 | 5¼" | 13" |
| ADA-250S | 115/230 | 45-65 | 250 | 50 or 60 | 115 (1) | 80 | 8¾" | 13" |
| ADA-500S | 115/230 | 45-65 | 500 | 50 or 60 | 115 | 130 | 10½" | 15" |

(1) 230 Volt Available (2) For 50 Hz, add about 5 lbs.

**Features:**

- Up to 500–VA Output
- Fully Regulated Sine Wave
- All Solid-State
- Protected Input/Output

**Performance Specifications:**

**OUTPUT:**

**Frequency Output:** 50 or 60 Hz, standard; other specific frequency, custom

**Frequency Regulation:** ±1%, ±.1%, ±.015%, ±.005% or better.

**Temperature Range:** 0° C to + 50° C

**Wave Shape:** Sine Wave, 3% Distortion max.

**Output Voltage:** 115 or 230V AC nominal

**Voltage Regulation:** ± 1% any combination of full line and load change

**INPUT:**

115V AC or 230V AC, ±10%, 45 to 65 Hz; or 22 to 30V DC

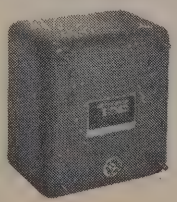
**Applications:**

Ideally suited for synchronous motor drives, chronographs, stroboscopes, generator frequency control; running timers, clock and time-of-day systems, tape recorders, general laboratory use.

## 5VA INVERTER — PRECISION FREQUENCY

Model DA5S

Standard 115 V 60 Hz, available at any fixed frequency from 50 to 400 Hz



- Accuracy to ±.0002%
- Sine Wave, max. THD 5%
- Input 28V DC ± 4V

Size: 4½" x 5" x 3¼"
Weight: 3 lbs. approx.

# A.C. POWER

**FROM THE A.C. POWER SUPPLY PROBLEM SOLVERS**
**STANDARDS ■ SPECIALS ■ CUSTOM**

## A.C. POWER SUPPLY RATING COMPARISONS

The methods used in arriving at the ratings of A.C. Power Supplies vary greatly from manufacturer to manufacturer. There are no standards existing for the purpose of quick and valid comparisons and a certain amount of "Specsmanship" has been the result. This can easily lead to getting very much less for your power supply dollar than you are entitled to.

**THERE ARE SIX MAJOR AND VERY IMPORTANT CONSIDERATIONS TO TAKE INTO ACCOUNT WHEN LOOKING INTO THE NAMEPLATE RATINGS OF A.C. POWER SUPPLIES. THEY ARE:**

1. The Output Power or Voltampere (VA) Rating.
2. The Output Current Rating.
3. The Effect On The Supply Of Loads Having High Inrush or High Peak Recurrent Currents.
4. How The Ratings Are Affected By Low Input Line Voltages.
5. How The Ratings Are Affected By Low Power Factor Loads.
6. Is The Supply Fully Isolated, Both Input and Output, For Reasons Of Safety and Flexibility?

Please Contact Us For Additional Information Concerning A.C. Power Supply Rating Comparisons.

- ☐ Single, two and three phase outputs
- ☐ Up to 5000 VA per phase in 144 standard models
- ☐ Fixed or variable output frequencies, 45 Hz - 10 kHz
- ☐ Tight regulation vs. line and load changes
- ☐ Instant response time
- ☐ Low output distortion
- ☐ Full rated output into loads of any power factor
- ☐ Up to 150% of rated output with high power factor loads
- ☐ Instantaneous overload protection, automatic recover
- ☐ Complete transformer-couple isolation, input and output
- ☐ All silicon solid state, entirely new circuit concepts
- ☐ Smaller, lighter, simpler, less expensive, more reliable
- ☐ Can be used as linear power amplifier
- ☐ Complete line of plug-in oscillators
- ☐ Digital LED readout for frequency, volts and amperes
- ☐ Wide variety of options available

## SPECIFICATIONS

**INPUT VOLTAGE:** 115 VAC ± 10%, single phase. Units up to 750 VA output.

115/230 VAC ± 10%, single phase. 1000 to 1500 VA output. Three phase inputs available.

120/208 or 230 VAC ± 10%, three phase. Units over 1500 VA output.

**INPUT FREQUENCY:** 48-72 Hz

**EFFICIENCY:** 50-70%, depending on operating conditions.

Various input voltage, frequency and power options are available, many at no extra charge.

**OUTPUT VOLTAGE:** 0-130 for single phase and 0-130 line to neutral for 2 or 3 phase units. Other ranges or combinations of ranges available.

**LOAD REGULATION:** ± 0.5%. No load to full load. Adjustable through zero for specific loads.

**LINE REGULATION:** ± 0.1% for ± 10% line change.

**POWER FACTOR:** Full rated VA into any power factor loa down to zero, lead or lag.

**DISTORTION:** 0.5% max. harmonic distortion at frequen extremes. Less at mid-band.

**OVERLOAD AND FAULT PROTECTION:** Instantaneous, aut matic recovery short circuit and overload protection. Fa acting main circuit breaker for fault protection.

**METERING:** Output voltmeter. Digital readout optional.

**EXTERNAL INPUT:** Via optional plug-in. 9 volts RMS. 1 ohms input impedance.

**OPERATING TEMPERATURE:** 0° to 55°C.

**FRONT PANEL COLOR:** Dark grey, white lettering.

Some of the special options available include input power types, output voltage ranges or combinations of ranges, metering, digital LED readout for frequen volts, amperes and phase angle, higher and lower frequency outputs, higher and lower power outputs, physical configurations, paint colors, tigh regulation specifications, single to multi-phase output switching, etc. Completely special or custom units providing solutions to virtually any A.C. power supp problem can be furnished.

# Behlman Engineering Corporation

P.O. BOX 4518 • 427 N. NOPAL STREET • SANTA BARBARA, CALIFORNIA 93103 • (805) 963-8691

## 10/500 SERIES

The 10/500 series of AC Power Supplies are linear power amplifiers driven by plug-in oscillators. Fixed and variable frequency oscillators, with frequency accuracies to 0.001% and 0.1%, respectively, are available in a wide variety of standard models. An almost unlimited variety of oscillators with various degrees of accuracy and many special features can be provided.

For single phase power output a power amplifier is driven by a single phase oscillator. Two separate power amplifiers driven by a two phase oscillator and three separate power amplifiers driven by a three phase oscillator are used to provide two and three phase power outputs. Units are available capable of providing a choice of single or multi-phase output by means of a front panel mode selector switch.

The output power is transformer coupled and completely isolated. It can be left floating or one side grounded.

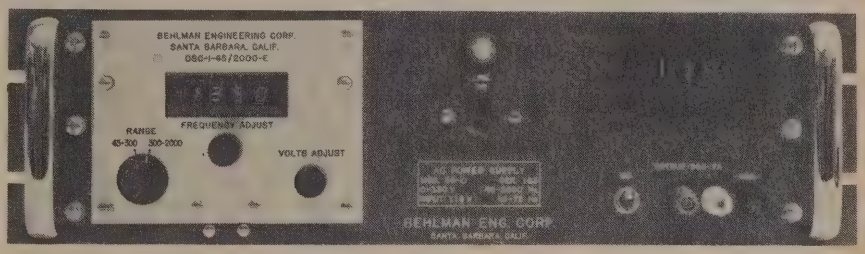
Line input to these units is via very advanced isolating magnetics.

These power supplies are capable of providing continuous full-rated volt-ampere output under worst case conditions, i.e., zero power factor loads either leading or lagging, 10% low line and output voltage at 75% of maximum. With unity power factor loads, nominal line and maximum output voltage, continuous duty at 150% of rating is permissible. The graph outlined below shows maximum power output for various conditions of load power factor output voltage, line voltage and ambient temperature. Even though these power supplies are rated under worst case conditions and in addition have a 50% overload capability they are nevertheless smaller, lighter and less expensive than other supplies whose ratings have been derived under considerably more favorable operating conditions.

Complete overload, short circuit and fault protection is provided by a combination of an instantaneous, automatic-recovery electronic protector plus a fast acting main circuit breaker.

## NEW from Behlman

**Model 50-C with Plug-In OSC-1-45/2000-E**



Digital readouts with LED's now available as an optional feature on all Behlman Engineering Corporation A.C. Power Sources, Plug-In Oscillators and URS. The digital display of Volts, Frequency in hertz (see price list), Amperes and Phase Angle in degrees may be obtained. Please call or write for additional details.

The graph to the right relates output power limits, expressed as a percentage of rated output, to various conditions of output voltage, load power factor, line voltage, ambient temperature and proximity to minimum frequency ratings.

The output voltages shown are the three most popular ranges. Other voltage ranges are comparable on a pro-rata basis.

An important advantage, inherent in Behlman Engineering Corp. A.C. Power Sources, lies in the availability of power amplifiers in four separate output frequency ranges. The narrow band power supplies effect cost and weight savings that add to the already existing size, weight and cost advantages of our full frequency models.

Many AC power supplies require derating to half power in the 5 kHz to 10 kHz range. This derating is not required with the Behlman Engineering 10/500 series.

**This graph carries an important message: Don't buy an AC power supply without knowing how its ratings were determined.**

## SERIES 10/500 AC POWER SOURCES

## SERIES 10/500 AC POWER SOURCES — MAIN FRAME AMPLIFIERS

TO ORDER: Use model number corresponding to output power level and number of phases required. Add letter corresponding to desired frequency range. All units are in rack mounting enclosure. Cabinet enclosed versions of any of these units are available. Order plug-in oscillator as listed below. For digital LED voltage readout in place of the analog voltmeter, add $85.00 to the prices listed below and designate with -D at the end of the model number. (Example, 3-10-C-D).

| OUTPUT POWER | MAXIMUM AMPERES (per phase 0-130 V.) | MODEL NUMBER | OUTPUT FREQUENCY RANGE (Hz) | | | | WEIGHT (lbs.) A MODELS | DIMENSIONS |
|---|---|---|---|---|---|---|---|---|

* Also available with 3-phase Scott T output. Add "T" after "2" in model no. For example: 2T-35-.

## SERIES OSC PLUG-IN OSCILLATORS

The OSC series oscillators are designed to plug into the front panel of all Behlman Engineering Corporation AC Power Supplies. They are available in a wide variety of fixed and variable frequency outputs. Single, two and three phase models provide suitable drive signals for multi-phase supplies. These oscillators readily synchronize with external signals. In addition to the standard units shown below virtually any combination of fixed or variable frequencies to any practical degree of accuracy can be provided. Many special features, including provisions for external sync or drive, can be supplied.

| FIXED FREQUENCY | MODEL | FREQUENCY ACCURACY 1% | 0.5% | 0.25% | 0.1% | 0.01% | 0.001% |
|---|---|---|---|---|---|---|---|
| | | **E** | **F** | **G** | **H** | **J** | **K** |
| SINGLE PHASE | OSC-1-XXX*— | $ 95 | $110 | $130 | $155 | $330 | $485 |
| TWO PHASE | OSC-2-XXX*— | 170 | 190 | 210 | 235 | 395 | 555 |
| THREE PHASE T | OSC-2T-XXX*— | 180 | 200 | 220 | 245 | 410 | 475 |
| THREE PHASE Y | OSC-3-XXX*— | 195 | 220 | 240 | 265 | 445 | 585 |

*Insert desired frequeny in place of XXX. Add code letter for desired frequency accuracy to model number.

| VARIABLE FREQUENCY | MODEL | | | | | |
|---|---|---|---|---|---|---|
| SINGLE PHASE | OSC-1-380/420— | $245 | $270 | $295 | $365 | "For digital LED frequency readout in place of the circular dial, add $125.00 to the variable frequency model prices and designate with OSCD in place of OSC in the model number." |
| | OSC-1-350/450— | 245 | 270 | 295 | | |
| | OSC-1-300/500— | 285 | 310 | 335 | | |
| | OSC-1-44/66— | 285 | 310 | 335 | | |
| | OSC-1-44/66—320/480— | 350 | 375 | 400 | | |
| | OSC-1-45/2000— | 360 | | | | |
| | OSC-1-150/2000— | 350 | | | | |
| | OSC-1-45/10000— | 410 | | | | |
| | OSC-1-150/10000— | 390 | | | | |
| TWO PHASE | -2- | ADD 25% TO SINGLE PHASE PRICE | | | | |
| THREE PHASE T | -2T- | ADD 30% TO SINGLE PHASE PRICE | | | | |
| THREE PHASE Y | -3- | ADD 35% TO SINGLE PHASE PRICE | | | | |
| EXTERNAL INPUT PLUG-IN | EIP-1 | $35 For one phase external input | | | | |
| | EIP-2, 2T | 45 For two phase external input | | | | |
| | EIP-3 | 60 For three phase external input | | | | |
| EXTERNAL SYNC | -SN | 35 May be added to all fixed or variable frequency oscillators | | | | |

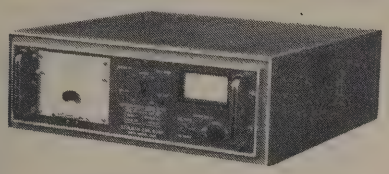
## NINTERRUPTIBLE A.C. OWER OURCES



e UPS-10/500 Series of uninterruptible A.C. power sources e available in the same basic sizes and power ratings as the ries 10/500 standard line of A.C. Power Supplies. Battery ck-up power can be furnished by a variety of gelled or liquid ectrolyte storage batteries. The lower powered units (100- 0 VA) can be furnished with built-in gelled electrolyte bat- ies.

The photograph illustrates a Model UPS-25 with an output wer capability of 250 VA and a self-contained battery pack 15 minutes of standby operation.

These UPS systems are unique in that they are linear transistorized power amplifiers which inherently do not generate EMI or RFI either conducted or radiated and can have lower distortion (under ±0.5%), tighter regulation (under ±0.5%). In addition, they can be supplied as frequency changers with battery backup capabilities.

All of the UPS units include a battery charger, electromechanical or solid state bypass switch, appropriate indicating lights and power line failure alarm provisions. The output frequency of the UPS is phase locked to the input power line frequency under conditions of normal operation. In the event the A.C. power line fails, the UPS continues to furnish the load with A.C. power by operating from the battery bank. The output frequency of the UPS is then determined by the highly stable internal oscillator. During normal operation the load is supplied with power from the output of the UPS. Therefore, there is no switch overtime involved if input power is interrupted.

Battery banks can be furnished for relay rack mounting or to the customer's specific requirements. Battery interconnect cables are provided with all standard UPS configurations. Please call or write for additional details.

Add 5.25 inches for all -SS models.

## ROGRAMMABLE A.C. POWER SOURCES

e entire Series 10/500 A.C. Power Supplies are available th programmable plug-in oscillators. These units may be ogrammed for output voltage level, frequency or phase gle/s. Any or all of the above functions may be incorporated o a single plug-in oscillator.

All of the generally accepted methods of programming can e used with these units. This includes resistance and voltage ogramming as well as digital programming with either binary BCD format from computers, micro-processors, keyboards, nched tape or key punched cards.

Manual local control over voltage, frequency or phase angle n be provided on the front panel of the plug-in oscillator in e form of multi-turn potentiometers. Selection of either local or automatic remote control is an optional feature. A digital readout display mounted on the main front panel of the A.C. Power Supply can be provided to display the functions outlined above. The selection of the desired function to be displayed (Voltage, Frequency or Phase Angle) may be made by either local manual control or remote control.

These programmable A.C. Power Supplies can greatly simplify the design of automatic checkout systems, simulation of A.C. power line anomalies, environmental testing, automatic production testing, etc.

Please call or write for more details. Your inquiries will receive prompt attention.

## HE A.C. POWER SUPPLY PROBLEM SOLVERS

**DO YOU HAVE A SPECIAL AC PROBLEM?**

- Behlman Engineering versatility can solve it.
- A great variety of options provide solutions to many special requirements.
- Completely special or custom units or systems can be provided.

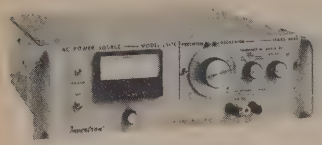
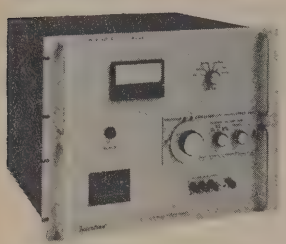
AC POWER SOURCES
FREQUENCY CHANGERS





# SOLID STATE *Invertron*®

## THE MOST RESPECTED NAME IN AC POWER FOR THE GENERATION CORRECTION AND CONTROL OF AC AMPLITUDE, FREQUENCY, AND PHASE.

- 100 VA TO 10,000 VA SINGLE-PHASE OUTPUT
- 200 VA 2$\phi$ TO 30,000 VA 3$\phi$ OUTPUT
- FREQUENCY RESPONSES FROM 45Hz TO 20KHz
- SINE-WAVE WITH LOW HARMONIC DISTORTION
- EXCELLENT LINE AND LOAD REGULATION TO .01%
- SWITCHABLE OUTPUT VOLTAGE RANGES FOR FULL POWER AT LOWER VOLTAGES
- BROAD CHOICE OF INTERCHANGEABLE PLUG-IN OSCILLATORS
- OVERLOAD AND SHORT-CIRCUIT PROTECTION
- OPTIONAL INPUT VOLTAGES: 117V 1$\phi$ TO 460 V 3$\phi$

Invertrons® have earned world-wide respect through their versatility, reliability, and outstanding performance. In addition to low distortion, high input stability and high power density, these silicon solid-state AC power sources use plug-in oscillators as frequency-determining elements and can be stacked electrically to provide one-, two-, or three-phase power. All Invertrons® fit a standard 19" rack, or may be ordered with the appropriate cabinet for floor or bench use.

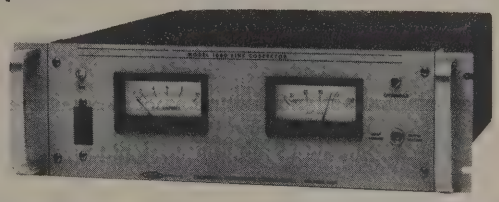
## SERIES 1000 DYNAMIC SOLID STATE AC LINE CORRECTORS
### For Precision AC Power Independent of Powerline Disturbances



- REDUCES 500 VOLT 10 μSEC TRANSIENTS BY 1000-TO-1
- SUPER REGULATION LINE — 0.025% LOAD — 0.025%
- PURE SINE WAVE POWER
- HARMONIC DISTORTION REDUCTION OF 50:1
- IMPULSE SETTLING TIME LESS THAN 20 MICROSECONDS
- 100 DB COMMON MODE ISOLATION
- HIGH STABILITY — 0.05%/24 HOURS
- AUTOMATICALLY RECOVERS FROM OVERLOAD IN LESS THAN ONE CYCLE

# UNITED PRICING REPORTS

## the single source that speeds up invoicing, pricing, quoting, purchasing and estimating

Electronic component prices change so fast, you'd need a team of people just to keep up.

United Pricing Reports is the better way. When you subscribe to Pricing Reports you receive 1500 pricing sheets (3000 pages) of the latest prices, as of the date we ship them to you.

This gives you, in a single source, up-to-the minute selling prices on more than 500,000 electronic components.

United Pricing Reports gives you accurate resale prices at the exact moment you need them. Not hours or days later. So it helps you eliminate frantic phone calls, letter writing and catalog scanning to check on prices when you write an invoice or type a purchase order.

## Twice weekly price updates.

One week after you receive your Pricing Reports source book (1500 pricing sheets) you begin receiving twice weekly price updates. You simply take these new price pages and replace the now obsolete pages with them.

The whole process is simple. All information is organized alphabetically by manufacturer. And each manufacturer's price schedule is listed by part number in numerical/alphabetical sequence.

One more thing. When we promise twice weekly updates, we deliver. 52 weeks a year, consistently. Not monthly or every other month. We have a tradition of delivery on our promises, and we're certainly not going to stop now.

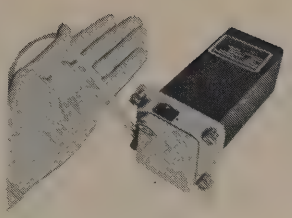
# ATA PRINTERS

## TRIP PRINTERS

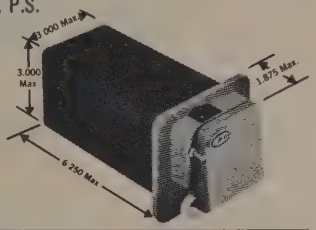
### ODEL AN16



high reliability, compact, light-eight, fully alpha-numeric Strip inter utilizing the simplest ethod of data reproduction, im-cting pressure sensitive paper tween a hammer and a character heel "on-the-fly." Designed for litary airborne applications, it eets all the requirements of MIL-5400, Class 2, Curve III.

- High Reliability: 5000 hours airborne MTBF
- Compact Size: 3″ x 3″ x 6.25″
- Lightweight: 4 pounds
- Low Maintenance: No lubrication or adjustments
- DTμL Input: 6 BIT parallel
- Character Selection: 64 characters, ASCII
- Character Rate: 25 per second
- Configuration: 1A) Printer with controls
  2A) 1A with paper storage
  3A) 2A with 400 Hz, P.S.
  4A) 1A with 400 Hz, P.S.

### N-16-1A STRIP PRINTER



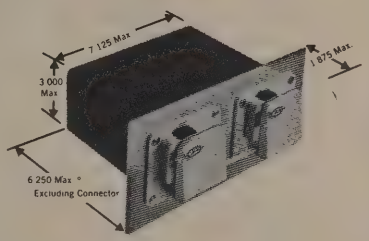
**put Power AN-16-1A and -2A only**

| Voltage | Regulation | Standard |
|---|---|---|
| +26 VDC | ±2 VDC | 1.5a ave<br>2.5a peak<br>12% duty cycle |
| +12 VDC | ±5% | 20 ma max. |
| −12 VDC | ±5% | 20 ma max. |
| +4.9 VDC | ±5% | 350 ma max. |

### N-16-2A

**r Record Storage**

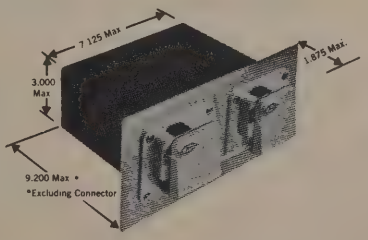
hen the system application re-ires a take-up spooler which will ore all or any portion of a printed cord, the spooler module is added the printer and both modules e then mounted to a common nel and enclosed by a single rear ver. Power for the spooler is de-ed at the printer interface con-ctor at the rear of the enclosure.



### N-16-3A

**r Record Storage and tegrated Power Supply**

the system application requires at the printer and spooler derive own DC voltages, a power sup-y module is added to the rear of e spooler module and suitably terconnected into the printer and ooler modules.



**put Power**

| 115V<br>400 Hz 3φ | ±10%<br>±20 Hz | 60 Watts max. |

## LINE PRINTERS

### MODEL 2000

This Digital Line Printer utilizes a unique hypocyclodial printing mechanism to provide high reliability, at high printing speeds in rugged military environments. Designed to meet the requirements of MIL-E-16400 for use in military programs.

- High Reliability: 2000 hours shipboard MTBF
- Size: 19″W x 10.5″H x 20″D
- Weight: 70 pounds
- DTμL Data Input: 4 BIT, parallel BCD
- Data Columns: 21 maximum
- Character Positions: 12 per column
- Printing Speed: 15 lines per second

## UNINTERRUPTIBLE POWER

We have come to depend on the wall socket, but when all else fails, you can rely on the Clary uninterruptible power source. Perfect insurance against utility outages, brown out and line transients. The Clary "MINI-UPS" is available in single phase ratings from 625 VA to 10 KVA. Ask for our brochure/specification.

| VA | Unit Price |
|---|---|
| 625 | $1650 |
| 1250 | $2050 |
| 2500 | $3390 |
| 5000 | $7500 |
| 7500 | $10,300 |
| 10,000 | $11,100 |

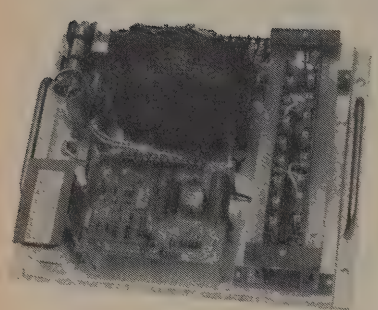
## SINGLE PHASE INVERTERS DC TO AC
## SINE WAVE 60 Hz FOR ALL TYPES OF LOADS
## 250 VA TO 12 kVA



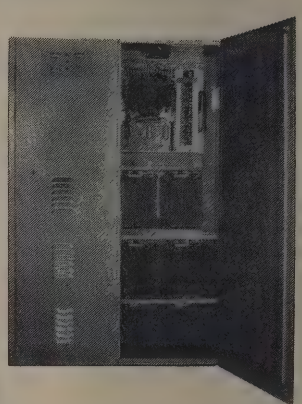
OPEN FRAME MODULE TYPE INVERTER

**SPECIAL FEATURES**

- High MTBF
- 70-85% efficiency
- New patented design
- No feed back loops
- Overload protection
- Low cost
- Self clearing power components, no SCRs
- Regulated output
- Built to meet UL 924
- 50 Hz available
- Low level start-stop, for remote control
- Automatic low voltage disconnect protects batteries from damage

**TYPICAL USES**

- Telephone switching systems
- Electronic cash registers
- Intercoms
- Microwave relay
- Industrial control equipment
- Emergency radios
- Relays and transformers
- Teletype or Telex
- TV monitors
- Fire alarms
- Remote unattended equipment
- Burglar alarms
- Hospital electronics
- Computer equipment
- R.F. transmitters and receivers
- Key telephones



ENCLOSED CABINET TYPE INVERTER shown with right door open and battery compartment belo

These compact modules are designed for mounting in equipment which requires DC to AC conversion. Input and output terminations are terminal blocks and buss bars. Semiconductor switching heat sinks are removable with quick disconnected terminations. PC control card is plug or terminal block terminated for easy removal. Simplified circuitry provides ease of maintenance.

These are floor and/or wall mounted inverter units mount in heavy gauge sheet metal cabinets with front opening k locked doors. The cabinets contain ventilation louvers a knockouts for interwiring with BX, Romex or conduit. The i ternal construction of each cabinet consists of a DC to A inverter and battery compartment. Above 4 kVA a separate ba tery cabinet or open rack is required which is optional. O tional front panel meters and controls available. Battery pric on request.

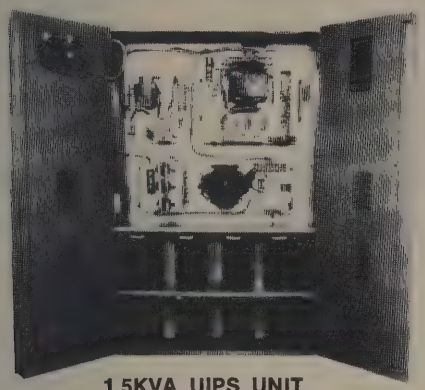
## UNINTERRUPTABLE POWER SYSTEMS



**1.5KVA UIPS UNIT**
Shown with two front doors open.

### SOLID STATE, BATTERY POWERED EMERGENCY AC POWER GENERATORS
### 250VA TO 12KVA OUTPUT UNINTERRUPTABLE UPS SERIES OR INTERRUPTABLE IPS SERIES SINE WAVE OUTPUT

These are floor and/or wall mounted inverter units mounted in heavy gauge sheet metal cabinets with front opening key locked doors. The cabinets contain ventilation louvers and knockouts for interwiring with BX, Romex or conduit. The internal construction of each cabinet consists of battery charger, DC to AC inverter and batteries. Above 1.5KVA in UPS and 4KVA in IPS requires an external battery cabinet. For typical uses see preceeding page.

### NIQUE FEATURES

- Automatic operation upon power failure, no switch to throw.
- Automatic battery equalization every few months, no timers to turn.
- Inverter output closely resembles the AC sine wave from the utility power cord.
- Regulated 60Hz frequency output.
- Regulated voltage output.
- Heavy gauge sheet metal cabinets with special air louvers.
- Front locked doors for easy access.
8. Lower maintenance required due to automatic features mentioned above.
9. Absolutely no interrupt during a utility power failure on UPS series.
10. Automobile batteries can be used in an emergency to increase running time.
11. Optional front panel meters and controls available.
12. Built to meet UL924 with U.L. recognized transformers built at Computer Power and regularly inspected by U.L. inspectors.
13. 50Hz and other output voltages available on request.
14. Special three phase connections are available on request.
15. Long life 10 year lead batteries with oversized water reserves. Water seldom added during normal life.
16. High MTBF.
17. Patented design.
18. No feedback loops.
19. Factory service available.
20. Automatic low battery disconnect protects batteries from permanent damage after a prolonged power failure.

### LECTRICAL SPECIFICATIONS

**put voltage:** 120V or 240VAC (specify as required, other voltages available request).

**put frequency:** 60Hz ±1Hz (50Hz available on request).

**eady state output voltage:** 120 or 240VAC ±5%, for changes in AC load rrent and battery voltage changes during power failure.

**itput frequency:** 60Hz ±1Hz (50Hz available on request).

**itput wave:** Sine wave, approximately 10% distortion into resistive load. % available on request.)

**wer factor load range:** 75 Lag to .9 lead.

**ort circuit on input lines:** Remote wall breaker and/or fuse protection for otection of the UPS unit itself.

**ort circuit and overload protection of output:** Electronic and magnetic.

**me to transfer to inverter on UPS series after a utility power failure:** None, the inverter runs continuously.

**me to transfer to inverter on IPS series after a utility power failure:** 1 sec. ax.

**itput specifications:** All output specifications are for UPS in normal or wer fail mode or IPS in power fail mode. IPS in normal mode has output ecifications of the AC input.

**Overload capability during emergency:** 130% for 5 minutes after utility power failure.

**Emergency run time standard:** 1½ hours with fully charged batteries (longer times available on request).

**Optional UPS front panel controls group:** Battery DC voltmeter. Output AC voltmeter. Utility power OK indicator. Inverter bi-passed indicator. System Test Switch. Hi-charge indicator. Battery trickle charge ammeter. (See M option.)

**Optional IPS front panel controls group:** Battery DC voltmeter: Output AC voltmeter. Utility power OK indicator. Emergency power activated indicator. System Test Switch. Hi-charge indicator. Battery trickle charge ammeter. (See M option.)

**Automatic bypass switch UPS only:** Upon an inverter failure the AC utility automatically transfers to the load with a mechanical switch (fast solid state 3 to 6MS swiching available on special request).

**Ambient operating temperature limits:** 32F to 120F (temperatures above 100F will shorten battery life considerably).

**Battery charger:** Automatic boost charge (equalize) is applied with a solid state timer approximately every 3 months. Trickle charge applied constantly.

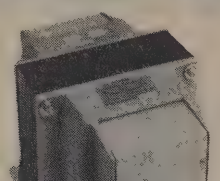
# SUPER-ISOLATION TRANSFORMERS
## 250VA to 5KVA 1ϕ, 9KVA and 15KVA 3ϕ

### STOP LINE NOISE • ELIMINATE POWER AND SYSTEM GROUND LOOPS • REMOVE ELECTROMAGNETIC NOISE



MODEL DT 250RI

**COMMON-MODE REJECTION:** >140db

**LOAD REGULATION:** ±3% Output to Input no load to full load

**INTERCOUPLING NOISE SUPPRESSION:** >150db 10KHz to 1Mhz

**ISOLATION:** Capacitance .0005 pf or.001pf Resistance greater than 10,000 Megohms

| Model Number | Power (VA) | Output Current (Amps) | Interwinding Capacitance .001 Pf | Interwinding Capacitance .0005 Pf | Primary VAC | Secondary VAC | Termination | H | Size W | L | Mounting MW | Mounting ML | Wt (lbs) |

MODEL 5656A

MODEL DSU 710

| Output Power VA | Model # | Input VAC | Input Phase | Input Hz | Output VAC | Output Phase | Output Hz | Battery | Backup Time | H x W x D |
|---|---|---|---|---|---|---|---|---|---|---|
| 700 | DSU 710 | 120 | 1 | 47-63 | 115 | 1 | 60 | Internal | 5-60 minutes | 10½ x 17 x 20 |
| 1,200 | DSU 1210 | 120 | 1 | 47-63 | 115 | 1 | 60 | Internal | 15-40 minutes | 15¾ x 17 x 20 |
| 1,800 | DSU 1810 | 120 | 1 | 47-63 | 115 | 1 | 60 | Internal | 10-30 minutes | 24½ x 17 x 20 |

NOTE: The DSU Series is provided with sealed internal batteries.

**TANDARD OPTIONS—Sensors, Alarms, Controls • tatic Reverse Transfer Switch (4 ms) • Frequency ynchronization and Phase Lock**

DSU" Systems are low- to medium-power-systems, ck-mountable, and self-contained for simplicity of stallation. Built-in gelled-electrolyte batteries provide liable, maintenance-free power. The systems are omplete with circuit breakers, rectifier/battery-harger, inverter, batteries, meters, sensors, alarms nd control circuitry.

5000" Series Models are capable of providing long-rm battery power for standard loads. The basic sys-m consists of: circuit breakers, rectifier/battery-harger, inverter and standard sensing and control rcuitry. Modular design permits building the system customer requirements.

| Output Power VA | Input Model # | Input Phase | Input Hz | Output Phase | Output Hz | Battery (External) | H x W x D |
|---|---|---|---|---|---|---|---|
| 2,000 | 5244 | 1 | 47-63 | 1 | 60 | 48 VDC | 61 x 24 x 32 |

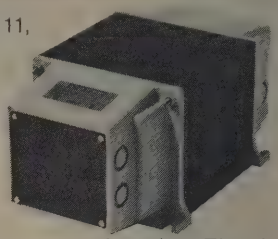
# ELGAR

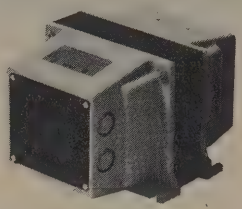
## HIGH ISOLATION TRANSFORMERS

8225 Mercury Court, San Diego, California 92111,
Phone (714) 565-1155, TWX-910-335-1246.



A HIT is a power transformer that provides an extremely low effective interwinding capacitance (0.005 to 0.0005 pF) between primary and secondary windings. It is triple-shielded with primary and secondary box shields between the two.

A HIT will isolate sensitive equipment from noisy power lines, or it will isolate noise-producing equipment that shares the same



power lines. While virtually eliminating common-mode noise problems, the HIT provides excellent attenuation of HF transverse-mode noise. Elgar's transformer operates on either a 50Hz to 60Hz power line at various nominal voltages, and can be used as a step-up or step-down transformer.

## GENERAL SPECIFICATIONS

**Input/Output Voltages: All HITs (except receptacle-type units) feature dual primary and secondary windings and are designed to operate with voltages that vary ±15% of nominal (see tables below for standard voltages).**
**Operating Frequency: 47 to 63Hz**
**Regulation: 3% No-load to Full Load Resistive**
**Dielectric Strength:**
**1.0 to 7.5KVA Single Phase, 2500VAC;**
**3.0 to 22.5KVA Three Phase, 2500VAC;**
**10.0 to 20KVA Single Phase, 4000VAC;**
**30.0 to 60.0KVA Three Phase, 4000VAC.**
**Full Rated Operating Temperature Range: 0-40°C designed for Class B (80°C) temperature rise, using a Class H (180°C) "UL Recognized" insulation system.**
**Overload: 200% of full rated current for 30 minutes.**
**Efficiency: Greater than 97% at rated load.**
**Common Mode Noise Attenuation: .005pF-126dB; .001pF-140dB; .0005pF-146dB**
**DC Isolation: 10,000 megohms minimum; primary-to-secondary, and either primary or secondary to ground.**
**Receptacle Type Units, 1KVA & 2.4KVA only ("R" suffix): All are wired for 120VAC single phase service.**

## STANDARD ELGAR SINGLE PHASE HITs

| Model No. | Rating (KVA) | Input Voltage (VAC) | Output Voltage (VAC) | Dimensions (inches/mm) A | C | B | Weight (lbs./kg.) |
|---|---|---|---|---|---|---|---|
| HIT-1.0* | 1.0 | 120/240 | 120/240 | 6.7/170 | 8.5/216 | 10.25/260 | 36/16.3 |
| HIT-1.0*R | 1.0 | 120 | 120 | 6.7/170 | 8.5/216 | 10.25/260 | 37/16.8 |
| HIT-2.4*R | 2.4 | 120 | 120 | 6.7/170 | 8.5/216 | 12.25/311 | 59/26.8 |
| HIT-2.5* | 2.5 | 120/240 | 120/240 | 6.7/170 | 8.5/216 | 12.25/311 | 58/26.3 |
| HIT-5.0* | 5.0 | 120/240 | 120/240 | 6.7/170 | 8.5/216 | 15.0/381 | 93/42.2 |
| HIT-7.5* | 7.5 | 120/240 | 120/240 | 6.7/170 | 8.5/216 | 20.0/508 | 146/66.2 |
| HIT-10.0* | 10.0 | 240/480 | 120/240 | 14.75/375 | 12.34/313 | 26.25/667 | 238/108 |
| HIT-15.0* | 15.0 | 240/480 | 120/240 | 14.75/375 | 12.34/313 | 28.25/718 | 300/136 |
| HIT-20.0* | 20.0 | 240/480 | 120/240 | 14.75/375 | 12.34/313 | 30.75/781 | 369/167 |

*The complete model number includes the effective interwinding capacitance. Thus, for a 1KVA with 140dB (.001pF) common mode noise attenuation, specify a Model HIT-1.0-.001.

**THREE PHASE SYSTEMS**
The user has the choice of ordering three each of the standard single-phase HITs and connecting them in the desired three-phase configuration, or ordering an Elgar three-phase system which also utilizes three single-phase HITs. In the latter case, the user only concerns himself with input/output wiring. To attain maximum noise immunity in a three-phase system, it is desirable to operate from a DELTA source and have a WYE connected secondary with balanced loads on each phase. This minimizes current flow in the neutral line. As with the single-phase units, the effective interwinding capacitance becomes part of the model number; thus a HIT-45.0-.001T is a three-phase unit providing 140dB of common-mode noise attenuation.

## STANDARD ELGAR THREE PHASE HITs

| Model No. | Rating (KVA) | Input Voltage (specify WYE or DELTA when ordering) WYE | DELTA | Output Voltage (VAC) | Dimensions (inches/mm) A | C | B | Weight (lbs./kg.) |
|---|---|---|---|---|---|---|---|---|
| HIT-3.0*T | 3.0 | 208Y/120 | 240 | 208Y/120 | 7.7/196 | 38.5/978 | 10.25/260 | 135/61.2 |
| HIT-7.5*T | 7.5 | 208Y/120 | 240 | 208Y/120 | 7.7/196 | 38.5/978 | 12.25/311 | 200/90.7 |
| HIT-15.0*T | 15.0 | 208Y/120 | 240 | 208Y/120 | 7.7/196 | 38.5/978 | 15.0/381 | 305/139 |
| HIT-22.5*T | 22.5 | 208Y/120 | 240 | 208Y/120 | 7.7/196 | 38.5/978 | 20.0/508 | 465/211 |
| HIT-30.0*T | 30.0 | N/A | 240 or 480 | 208Y/120 | 16.5/419 | 53.0/1346 | 26.25/667 | 715/325 |
| HIT-45.0*T | 45.0 | N/A | 240 or 480 | 208Y/120 | 16.5/419 | 53.0/1346 | 28.25/718 | 1000/454 |
| HIT-60.0*T | 60.0 | N/A | 240 or 480 | 208Y/120 | 16.5/419 | 53.0/1346 | 30.75/781 | 1220/554 |

*Add desired effective interwinding capacitance.

Elgar AC Line Conditioners ovide precise, clean AC power to itical loads by eliminating high- peed AC line and load transients nd distortion as well as providing recise regulation. These versatile struments have response times 000 times faster than the fastest onventional AC line regulators and line isolation of 70 to 100 dB, far superior to mere isolation transformers. All Elgar AC line conditioners are designed for continuous operation and are contained in rack-mount enclosures. Front panel controls include meters to monitor input and output voltages and output load current, an overload indicator and an input circuit breaker.

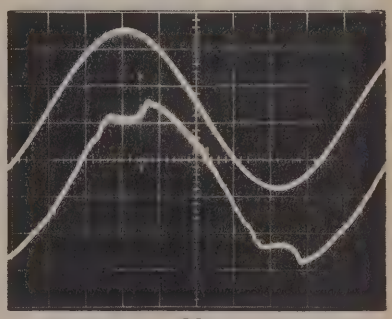
Users of voltage-sensitive equipment need isolation from high-speed AC line transients. These transients can cause erratic operation, component failures, and a reduction in equipment life. In sensitive instrumentation and data processing equipment, high-speed line transients often are the cause of erroneous information.

Elgar AC Line Conditioners are the best, most reliable solution to these problems.

## ENERAL SPECIFICATIONS

**PUT / OUTPUT ISOLATION: 100 dB (60 Hz)**
**JTPUT DISTORTION: 0.2% max for up to 10% input harmonic distortion***
**NE REGULATION: ±0.025% for ±10% input AC line variation**
**AD REGULATION: ±0.025% for no load/full change full current into unity to zero lagging or leading load.****
**EDUCES 500V 10μ SEC TRANSIENTS BY 1000:1**
**IPPLIES PEAK CURRENTS 3.5 TIMES RMS RATING**
**EMPERATURE COEFFICIENT: 0.005% per °C**
**EAK AMPLITUDE STABILITY: ±0.01% (cycle to cycle)**
**MPLITUDE DRIFT: ±0.05% 24 hrs constant line, load and temperature**
**IMPULSE SETTLING TIME: less than 20 μ sec**
**AMBIENT TEMPERATURE: 0-55°C**
**OVERLOAD INDICATION: Front panel lamp lights when rated output current is exceeded**
**OVERLOAD PROTECTION: Continuous overload actuates front panel circuit breaker**
**METERING: Reads: input voltage, output voltage, & output current**
**COOLING: Forced Air**

***400 Hz models 0.5% max.**
****400 Hz models ±0.1%**



**Y=75 volts/cm** **X=2 millisec/cm**

The lower trace shows a very distorted input AC line waveform with a 75 volt peak spike riding on it. The upper trace shows the output of the Elgar AC Line Conditioner which is perfectly clean and shows no trace of the AC input anomalies.

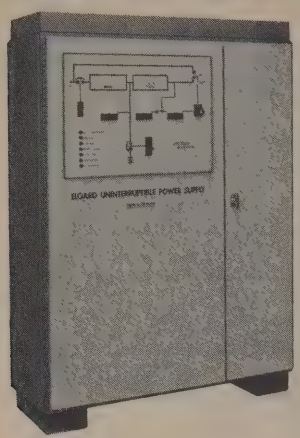
# ELGAR UPS/INVERTERS

8225 Mercury Court, San Diego, California 92111,
Phone (714) 565-1155, TWX-910-335-1246.

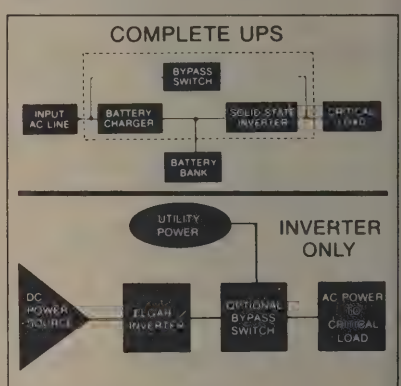


Elgar's, all solid-state Uninterruptible Power Systems (UPS), combine a battery charger, battery bank, solid-state inverter and bypass switch to provide clean, continuous power to critical loads. The battery charger converts AC line power to DC. Normally, this DC power simultaneously float-charges the battery bank and powers the inverter. Upon loss of input AC, the inverter continues to furnish the critical load with uninterruptible AC power by drawing its energy from the battery bank. Since the battery bank is always connected to the inverter as well as to the battery charger, there is no switchover time. AC output frequency from the Uninterruptible Power Source is phase-locked to the input AC under normal conditions. When there is no input AC, the output frequency is automatically determined by the stable internal oscillator.

In the unlikely event of a component failure within the Uninterruptible Power Source, the bypass switch will be activated and the critical load will automatically transfer to the input AC line. Elgar single-phase output UPS come equipped with an electromechanical contactor which performs the reverse transfer with a 50- to 150-millisecond interruption. An optional solid-state bypass switch (SBS) that can make the transfer with no interruption in power to the load is available for all single-phase UPS and Inverter models, and is standard in all three-phase UPS.

Elgar Inverters are designed to accept DC input power (derived from a nominally 125 or 130VDC rectifier system or from a battery bank with a final discharge voltage of 105VDC) and convert it to tightly regulated, single-phase AC power.

Elgar UPS are designed for a useful life of 15 to 20 years. Mathematical analysis and operating history indicate the anticipated mean-time between failures (MTBF) will be about 20,000 hours, depending upon the model and features selected. With appropriate interface of the bypass switch (electromechanical or static) with the load, so that bypass action does not cause a transient greater than the load can tolerate, an MTBF in excess of 100,000 hours for the output load bus can be demonstrated.



## UPS GENERAL SPECIFICATIONS

**Voltage Regulation:** ±1%
**Instantaneous Transient (30% load change):**
- **Single phase models:** ±10%
- **Three phase models:** ±6%

**Frequency Stability:** ±0.25%
**Continuous Power:** Rated KVA at 0.8 to 1.0P.F.
**Load Power Factor:** 0.7 lag to unity
**Harmonic Distortion:** 5% THD maximum
**Overload Rating:**
- **0.5 to 2.5KVA:**
  - 110% for 15 minutes
  - 150% for 5 seconds
  - 200% for 5 cycles
- **5KVA and above:**
  - 125% for 20 minutes
  - 150% for 10 seconds
  - 200% for 10 cycles

**Inverter Efficiency at Full Load:**
- 0.5 to 2.5KVA: 75% minimum
- 5KVA to 15KVA: 80% minimum
- 20KVA and above: 84% minimum

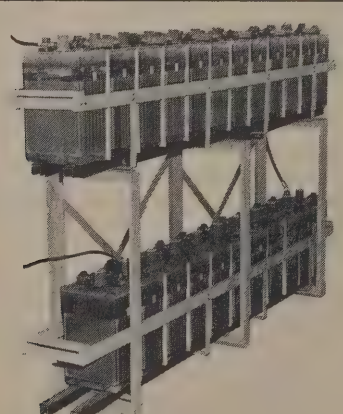
**STANDARD INSTRUMENTS:**
- DC Voltmeter, AC Voltmeter, Output AC Ammeter—5KVA & above

**STANDARD INDICATORS:**
- Input Power On
- Low DC
- Bypass Switch Position
- Fuse(s) Open—5KVA & above
- Battery Operation
- Overheat—5KVA & above
- Overload

**CONSTRUCTION:**
- In accordance with applicable NEMA standards and the National Electric Code (NEC).

**ENVIRONMENT:**
- Operating Temperature: 0 to 50°C
- Humidity: to 95%

## BATTERIES FOR YOUR UPS



Elgar's Uninterruptible Power Systems (UPS) are designed to interface with storage batteries of virtually any type. Elgar's chargers provide plus or minus one-half percent voltage regulation and are electronically current limited. They have adjustable float and optional equalize potentials and can thus provide outputs compatible with any battery desired. Elgar's inverters provide specified output performance over a wide range of DC input voltage, normally ±18% from the chemical (nominal) battery voltage levels. To select a battery, the primary concern is the correct number of cells placed in series to achieve the voltage necessary for proper UPS operation (see the data on the facing page for individual UPS model requirements). Next, the ampere hour capacity needed to achieve the desired period of support time must be determined.

When you purchase a battery through Elgar with your UPS, you are assured of a balanced system with appropriate features and guaranteed performance. (Equalize capability, for example, is included in the price of a system which is sold with nickel-cadmium or lead antimony batteries which require equalization, but not included with lead-calcium batteries which do not.) For those overseas customers who wish to purchase batteries directly from the manufacturer for purposes of convenience and economy, Elgar's application engineering staff will be pleased to assis you in selection.

s:
Based upon full inverter output load at 0.8 p.f., 147VDC for 168VDC nominal systems, 105VDC for 120VDC nominal systems.
nput taps provided on 50Hz units for nominally 220, 230 or 240.

(3.) Breaks into two sections (Charger & Inverter) for shipment.
(4.) Many optional input and output voltages are available.

### TIONAL FEATURES INCLUDE:

ditional Annunciation, Float Equalize Switch and/or ner, Maintenance Bypass Switch, Narrow Frequency nc Window, Slow Slew Circuit, and Remote Status nels. Consult factory for details.

### FREQUENCY CONVERSION WITH AN ELGAR UPS

An Elgar AC Power Source is suitable for most frequency conversion requirements. For 10KVA and above (where neither variable frequency nor voltage is required), a UPS may be ordered for 60Hz input to 50Hz output or vice versa.

# ELGAR

## AC POWER SOURCES

8225 Mercury Court, San Diego, California 92111,
Phone (714) 565-1155, TWX-910-335-1246.

Elgar has long been the industry leader in producing solid-state Frequency Converters (AC Power Sources) for a variety of applications. These include laboratories, receiving inspection, production testing, computer-controlled automatic test systems, and facilities which require variable voltage, fixed or variable frequencies independent of power line and load variations.

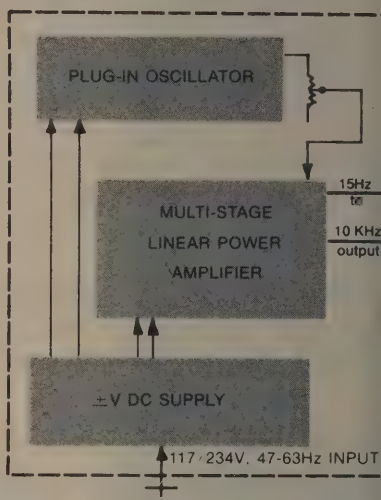
Think of an Elgar AC power source as a high-power linear amplifier driven by a precision oscillator. Actually, the basic power amplifier consists of a ±DC supply and a multi-state amplifier with a multiple-tap power output transformer. Output frequency is established by a plug-in oscillator.

Although frequently classed as instruments, Elgar power sources are actually power systems. They can deliver a variety of voltages and frequencies at the output, and the phase angles of the oscillators can be controlled, enabling the user to interconnect the output of two or more power sources into 2-phase and either Delta or Wye, 3-phase configurations.

Because of the relative ease of control of the output frequency, amplitude and phase angle, Elgar power sources can be externally programmed by a computer or other digital commands via an Elgar Decoder Programmer Oscillator.

This enables avionics and other system designers to automatically "exercise" their end products under simulated power conditions.

Since the many possible outp variations are achieved either by a plug-in device or by external interconnection, Elgar power sources can serve many needs without fear of obsolescence.



## GENERAL SPECIFICATIONS

**Input: 115 or 230VAC, 47-63Hz single-phase, standard for all models through 1500VA; 230/400V or 120/208V 3-phase for 1751, 3001, 1753A.**
**Output Voltage Ranges: 0-32, 0-130, 0-260**
**Output Frequency Range: 45-10,000 Hz**
**Load Power Factor: ±0.7 at full VA**
**Output Harmonic Distortion: 0.6% THD worst case**
**Line Regulation:**
**±0.25% at full load vs. ±10% change of input line voltage.**
**Load Regulation:**
**±1% from no load to full load over full frequency range and ±10% input range. Adjustable to better than 0.1% for specific load conditions. Fixed frequency systems always less than ±0.25%.**
**Response Time: Less than 50 μsec.**

## NEW "C" SERIES MODELS

Elgar's new "C" series provides lighter weight, reduced size and high efficiency than the standard line. While available only with a single range output (0-125V) due to the transformerless approach employed, an optional auto-transformer is available to provide 65V or 250V outpu ranges.

| MODEL | OUTPUT POWER VA | Height In./mm. | Width In./mm. | Depth In./mm. | Weight Lbs./kg |
|---|---|---|---|---|---|
| 251C | 250 | 5.25/133 | 19/482 | 16/406 | 34/15 |
| 501C | 500 | 5.25/133 | 19/482 | 16/406 | 46/21 |
| 1001C | 1000 | 8.75/222 | 19/482 | 20/508 | 76/35 |
| 1503C | 1500 | 8,75/222 | 19/482 | 20/508 | 110/45 |

# OSCILLATORS FOR AC POWER SOURCES

8225 Mercury Court, San Diego, California 92111,
Phone (714) 565-1155, TWX-910-335-1246.

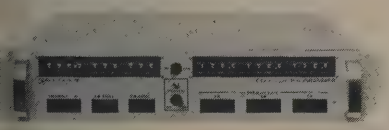
VARIABLE FREQUENCY OSCILLATOR

## FREQUENCY GENERATION TECHNIQUES

The output frequency of the power source is determined by the plug-in oscillator which develops the low distortion sine wave to the power amplifier. A variety of interchangeable versions are available, including .5Hz to 10KHz, narrow range variable or fixed frequencies with accuracies to 0.0001%.

Depending on the accuracy of frequency control desired, either of two methods of frequency generation is utilized. One method employs a modified phase shift oscillator.

This technique is used in both the variable and fixed frequency plug-ins since it requires only a change of resistance to produce a change in frequency. External sync capability is a standard option to this group of oscillators and the external sync signal can be sine or square wave, fundamental or odd order harmonics. The other method uses a crystal for precision fixed frequency. By utilizing these two methods of frequency generation, Elgar offers over 50 standard plug-in oscillators and programmable oscillators as well.



DIGITAL/ANALOG PROGRAMMER

## PROGRAMMABLE OSCILLATORS

Digital/Analog Programmers (DAPs) which provide the interface between a computer and any Elgar AC Power Source System are available to enable programming of every function controllable in an AC Source including frequency, voltage amplitude, and phase angle in multi-phase systems. Special purpose programmable oscillators such as Elgar's TG-704A are also available to simulate transients and line distortion as well.

Available with BCD inputs or per the IEEE standard interface bus, Elgar's DAPs enable the use of Elgar AC Power Sources with the most advanced Automatic Test equipment.

Specifications subject to change without notice

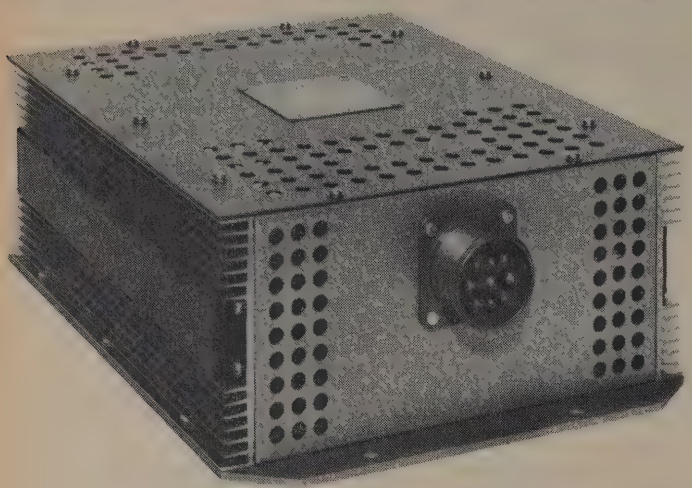
These oscillators provide 0.01% line and 0.01% load regulation and 0.01° phase angle regulation around the power amplifier(s) at the point(s) of sense. They also provide 0.1% amplitude and 0.1° phase angle stability for 1000 hours at constant line, load and temperature. Normally for fixed voltage applications. Please specify voltage. Amplitude temperature coeff. 0.005%/°C.

# FLITE-TRONICS 60 Hz & 400 Hz STATIC INVERTERS



## Other Inverters Available:

- Model PC-14B(A) 125 VA
- Model PC-15BC( ) 250 VA
- Model PC-15H ( ) 300 VA
- Model PC-17 600 VA

Environmental specifications of the above models, same as PC-17A

- 12 VDC to 24 VDC Converters
- 24 VDC to 12 VDC Converters
- Three Phase Converters Model PH-3$\phi$-400

## FAA TSO'd PC-17A

For applications requiring greater than 750 VA of continuous power, the Flite-Tronics' Model PC-17A Inverter can be paralleled as necessary to double, triple, or quadruple the output power of a single unit. This is simply done by phase locking the oscillator in the PC-17A. Malfunction of a single unit when connected in this manner will not damage the other units in parallel. Each unit has its own overload protection. Each device is capable of self-preservation.

**Now Available PC-50 TSO'd**

## SPECIFICATIONS MODEL PC-17A (750 VA) STATIC INVERTER

**INPUT VOLTAGE:**
28 VDC ±2.0 VDC

**INPUT CURRENT:**
39A — full load
1.5A — no load

**OUTPUT VOLTAGES:**
115 VAC +5% −7%
26 VAC +5% −7%

**OUTPUT FREQUENCY:**
400 Hz ±1%

**OUTPUT POWER:**
750 VA continuous for 115 VAC output
150 VA continuous for 26 VAC output
NOTE: Total continuous output power 750 VA.

**OUTPUT WAVEFORM:**
Sine Wave, Single Phase

**HARMONIC DISTORTION:**
7% maximum (Typically 3%)

**POWER FACTOR:**
.8 to −.95

**ALTITUDE:**
45,000 feet

**EFFICIENCY:**
70% typical

**TEMPERATURE:**
−65°F to 160°F

**WEIGHT:**
16.2 lbs.

**SIZE:**
Width 8½″
Length 12″
Height 4⅛″

**INPUT OVERVOLTAGE:**
Withstands 130% overvoltage (37 VDC) for five minutes minimum while delivering full rated 750 VA output power. Output voltage under this condition 115 VAC +5% −7%.

**EMISSION RFI:**
Radiated & Conducted . . . 90KC to 1000MC.
Far below levels specified in Appendix A of RTCA Paper 120-61/DO-108 Category "A".

**HUMIDITY:**
Greater than 95% for ten days, temperature cycled between 75°F to 160°F.

**VIBRATION:**
Tested to withstand in three directions:
.08 DA 5-15 Hz
.036 DA 15-70 Hz
10 G's 70-500 Hz

**SHOCK:**
To withstand at least 10 G's for 11 milliseconds in three directions.

**OVERLOAD CAPABILITY:**
Deliver 150% of rated output current at rated output voltage for a duration of not less than 5 minutes (i.e., 900 volt amp load).

**INPUT VOLTAGE PROTECTION:**
Unit withstands transients of 88 volts lasting 1 millisecond on the 28.0 VDC input line.

**EXCESSIVE OVERLOAD & OUTPUT SHORT CIRCUIT:**
Withstands without damage or degradation loads exceeding 150% nominal to an output short circuit. Unit delivers rated output on removal of above condition.

## SPECIFICATIONS MODEL PC-16 STATIC INVERTER

**POWER OUTPUT:**
250 VA Continuous
150% Overload 5 minutes
pf — .8 to 1.0

**VOLTAGE INPUT:**
1. 28 VDC ±2 Volts
2. Withstands 88 Volt Transient for 1 Millisecond

**INPUT CURRENT:**
14 Amp — full load
1 Amp — no load

**FREQUENCY:**
60 HZ ±1 Hz

**VOLTAGE OUTPUT:**
115 VAC RMS +5% −7%

**AMPLITUDE DISTORTION:**
Less than 7%

**WAVE FORM:**
Sine Wave

**PHASE:**
Single

**SHORT CIRCUIT**
Withstand for 1 minute or longer

**TEMPERATURE:**
−65°F to +160°F

**ALTITUDE:**
45,000 Ft.

**WEIGHT:**
16 lbs.

**SIZE:**
7½″ x 12″ x 4″ overall dimensions

**For application requiring greater than 250 VA of continuous power Model PC-16 can be paralleled to double or triple the output power of a single unit.**

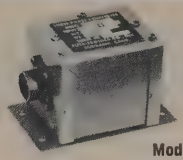
# FLITE-TRONICS 400 Hz INVERTERS & 3-PHASE CONVERTER

FAA TSO-C73 Model PC-15BC ( )

FAA TSO-C73 Model PC-17



Model PH-3$\phi$-400

## PC-15BC ( ) TSO'D (250 VA) STATIC INVERTER

**PECIFICATIONS:**

**NPUT VOLTAGE:**
28.0VDC ±2VDC, operates electrically down to 20VDC.

**NPUT CURRENT:**
13.2A Full Load
.75A No Load

**UTPUT VOLTAGE:**
115VAC rms +5% −7%
26VAC +5% −7%

**UTPUT FREQUENCY:**
400Hz ±1%

**UTPUT POWER:**
250VA @ 115VAC and 75VA @ 26VAC. Total load not to exceed 250VA

**UTPUT CONFIGURATION:**
1 Phase Sine Wave

**ARMONIC DISTORTION:**
Typically 3% (7% max)

**OWER FACTOR:**
.8 to 1.0

**ALTITUDE:**
45,000 feet

**EFFICIENCY:**
70% typical

**TEMPERATURE:**
−65°F. to 160°F.

**WEIGHT:**
7.5 lbs.

**DIMENSIONS:**
W6″ L10⅝″ H3$\frac{3}{32}$″

**INPUT OVERVOLTAGE:**
Withstand 130% input overvoltage for 5 minutes while supplying full rated VA output power. Output voltage under this condition 115VAC +5% −7%.

**OVERLOAD CAPACITY:**
Capable of 150% output current overload for at least 5 minutes.

**INPUT VOLTAGE PROTECTION:**
Inverter withstands transients of 88 volts lasting 1 millisecond on the 28.0VDC input line.

**EXCESSIVE OVERLOAD AND OUTPUT SHORT CIRCUITS**
Withstand without damage or degradation loads exceeding 150% of rated output to an output short circuit. Inverter delivers rated output on removal of above condition.

**HUMIDITY:**
Tested to greater than 95% for ten days, temperature was cycled between 75°F. to 160°F.

**VIBRATION:**
Tested to withstand in three directions:
.08 DA 5-15 Hz
.036 DA 15-70 Hz
10 G's 70-500 Hz

**SHOCK:**
Tested to withstand at least 10 G's for 11 milliseconds in three directions.

**EMISSION RFI:**
Radiated and conducted . . .90 KC to 1000 MC, far below specification limits of RTCA Paper 120-61/DO-108, Appendix A.

## PC-17 TSO'D (600 VA) STATIC INVERTER

**PECIFICATIONS:**

**NPUT VOLTAGE:**
28.0VDC ±2VDC, operates electrically down to 20.0VDC.

**NPUT CURRENT:**
31 Amps full load
1¼A no load typical

**UTPUT VOLTAGE:**
115VAC +5% −7%
26VAC +5% −7%

**UTPUT FREQUENCY:**
400 Hz ±1%

**UTPUT POWER:**
600VA @ 115VAC and 125VA @ 26VAC. Total load not to exceed 600VA.

**UTPUT CONFIGURATION:**
Sine Wave, Single Phase

**ARMONIC DISTORTION:**
Typically 3% (7% max)

**OWER FACTOR:**
.8 to −.95

**ALTITUDE:**
45,000 feet

## PH-3$\phi$-400 THREE PHASE CONVERTER

Flite-Tronics Co., Inc. introduces a three phase converter Model PH-3$\phi$-400, for use with Flite-Tronics' 400 Hz static inverters.

The PH-3$\phi$-400 is designed to convert two Flite-Tronics' inverters into a 115VAC, 400 Hz DELTA three phase power source with 60 degrees between phases. A transformer can be used to realize 120 degrees between phases. The PH-3$\phi$-400 will also convert three inverters into a WYE 115/200VAC, 400 Hz three phase operation.

**SPECIFICATIONS:**

**INPUT:**
28VDC at .15 Amp. max.

**FREQUENCY:**
400 Hz

**FUNCTION:**

**DELTA CONFIGURATION**

| 2 Each Inverters | Output VAC | Phase Angle | Total Power |
|---|---|---|---|
| PC-15BC ( ) | 115 | 60° | 500VA |
| PC-17 | 115 | 60° | 1200VA |
| PC-17A | 115 | 60° | 1500VA |

**WYE CONFIGURATION**

| 3 Each Inverters | Output VAC | Phase Angle | Total Power |
|---|---|---|---|
| PC-15BC ( ) | 115/200 | 120° | 750VA |
| PC-17 | 115/200 | 120° | 1800VA |
| PC-17A | 115/200 | 120° | 2250VA |

**ENVIRONMENTAL:**
Designed to meet RTCA paper DO-138 Category A

**TEMPERATURE:**
−55°C. to 71°C.

**ALTITUDE:**
50,000 feet

**SIZE IN INCHES:**
L3¾″ W2⅛″ H2⅜″

**WEIGHT:**
0.5 lbs.

# NOBRUSH® FREQUENCY GEORATOR™ CORPORATION

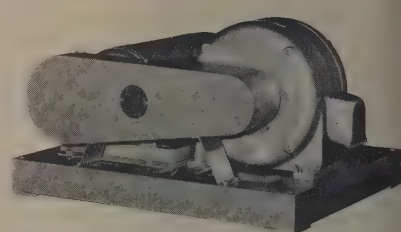
*Celebrating our 28th anniversary*

## PERMANENT MAGNET GENERATOR DESIGN

"NoBrush" Motor Generators and Frequency Converters are efficient, compact, dependable, quiet running units for powering all types of electronic systems and electrical equipment. The heart of each "NoBrush" power system is a "NoBrush" permanent magnet generator which features a cast aluminum rotor designed to give superior voltage stability. • A typical "NoBrush" generator is mounted with a high quality induction or synduction motor within a single aluminum alloy shell. • Oversize pre-lubricated ball bearings sealed for life, coupled with the absence of brushes, commutators or slip rings, insure long-term maintenance-free operation. • Georator brushless permanent magnet generators are noted for their compact construction, ruggedness, ability to withstand short circuits, and excellent wave form. • All Georator power systems whether utilized for frequency conversion or basic power requirements, provide true "line isolation and stabilization" for protecting sensitive electronic systems from momentary power interruptions, switching transients, brown outs, or voltage spikes.

## PERMANENT MAGNET FEATURES:

- ☐ *Line Isolation and Stabilization*
- ☐ *Stable Output Voltage*
- ☐ *High Overload Capacity*
- ☐ *Withstands Short Circuits*
- ☐ *Extremely Low R. F. Noise*
- ☐ *Minimum Maintenance*
- ☐ *Lightweight*
- ☐ *Low Audible Noise*
- ☐ *Cool Operation*
- ☐ *Operates in Adverse Environments*

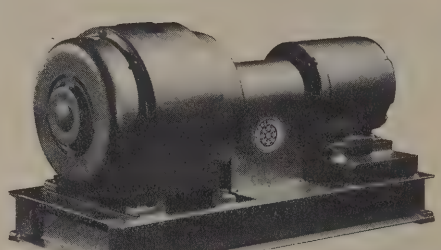


### 60 TO 60 Hz LINE ISOLATOR SERIES 30 UNIT SHELL

This small isolator stabilizer Motor-Generator offers full line isolation for small power requirements up to 1 KVA. Permanent magnet field generator coupled with the high inertia of the rotating system assures maximum electrical isolation between line and load. The rugged unit shell construction gives long, maintenance-free operation.

| Model No. | KVA Rating | Phase In/Out | Output Voltage | Input Voltage | Dimensions H"/L"/Weight |
|---|---|---|---|---|---|
| 35-118 | 0.35 | 1/1 | 115/230 | 115/230 | 14.5"/14.0"/110 lbs. |
| 30-194 | 0.5 | 3/1 | 115/230 | 230/460 | 14.8"/16.1"/120 lbs. |
| 30-198 | 0.5 | 1/1 | 115/230 | 115/230 | 14.8"/16.1"/120 lbs. |
| 30-195 | 1.0 | 3/3 | 120/208 | 230/460 | 14.8"/16.1"/130 lbs. |
| 30-199 | 1.0 | 1/3 | 120/208 | 115/230 | 14.8"/16.1"/130 lbs. |

These 60 to 60 Hz brushless generators, including those in the next column are designed to accept long term input variation of up to ±15% from nominal with no change in output. Inertia stabilization allows these units to absorb input line transients of as much as 30% for as long as 500 milliseconds with less than 1% change in output.



### 60 TO 60 Hz ISOLATOR STABILIZER SERIES 37 IN LINE

Larger Motor Generators in ratings up to 25 KVA are also available to provide full line isolation and distortion free power to protect electronic equipment from power line excursions and momentary power loss.

| Model No. | KVA Rating | Phase In/Out | Output Voltage | Input Voltage | Dimensions H"/L"/Weight |

Series 37 Data Sheets containing detailed specifications are available upon request.

### 50 TO 60 Hz and 60 TO 50 Hz FREQUENCY CONVERTERS

These ruggedly built, belt driven, moto generator sets are mounted on a stur steel frame base. Units in the 0.5 to KVA power range are designed arou the highly efficient NoBrush Permane Magnet Generator. Units in the 6.25 to KVA power range have brushless rotati rectifier type generators with voltage re ulators, to provide ±1% output voltag regulation. These motor-generators pr vide frequency conversion, basic powe and superior line isolation and stabiliz tion for exported and imported electric and electronic equipment.

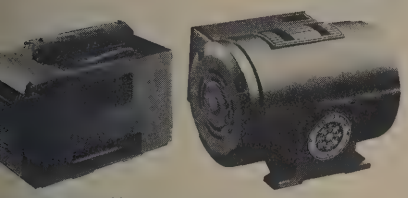
# CONVERTERS & GENERATORS

**he simplest, most rugged, most dependable power source.**



**0 TO 400 Hz**
**FREQUENCY CONVERTERS**
**SERIES 30 UNIT SHELL**

A highly compact, brushless, Motor Generator Set for conversion of 50 or 60 Hz power to 400 Hz or higher frequencies. Generator and Motor Rotors are pressed on a common shaft, with shielded ball bearing at ends of shaft, all contained within an aluminum alloy shell.

| Model No. | KVA Rating | Phase In/Out | Output Voltages Full Load * | Input Voltage ** | Dimensions H"/L"/Weight |

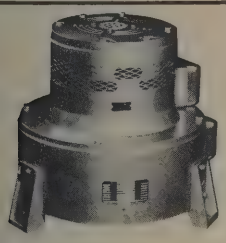
- Other Generator Outputs Available: 120, 180, 280, 360, and 840 Hz
- Other Standard and Non-Standard Voltages.
- Exact 400 Hz Output.
- DC Outputs at Low or High Voltage.



**60 to 400 Hz**
**FREQUENCY CONVERTER**
**SERIES 33 VERTICAL**

High quality induction motor is close coupled to a "NOBRUSH" generator providing a very compact high power to weight and size ratio. Available variations include: 50 Hz input; multiple standard and non-standard AC output voltages; Dual AC and DC outputs; and militarized construction.

| MODEL NO. | KVA RATING | PHASE IN/OUT | OUTPUT VOLTAGES FULL LOAD | DIMENSIONS DIAMETER"/H"/Lbs. |

| 38-035 | 10 | 3 | 380-420 Hz | 105-125/183-217 |
| 38-043 | 15 | 3 | 380-420 Hz | 105-125/183-217 |

**LIGHTWEIGHT**
**400 Hz ENGINE-GENERATORS**

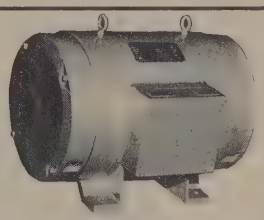
Lightweight 400 Hz permanent magnet engine-generators are available with 1Ø, or 3Ø, or DC, or dual AC/DC outputs. Applications include: geophysical, navigation, and communication systems; also fish conservation.

| MODEL NO. | KVA RATING | DC/PHASE OUT | OUTPUT VOLTAGE | WEIGHT |
|---|---|---|---|---|
| 31-001 | 0.5 | 1Ø AC | 115/230 | 43 |
| 31-002 | 0.5 | DC/1Ø AC | 115/230 | 44 |
| 31-008 | 0.75 | 3Ø AC | 115/200 | 50 |
| 31-014 | 0.5 | DC | 250/500 | 44 |

**VOLTAGE REGULATED**
**60 TO 400 Hz**
**FREQUENCY CONVERTERS**

This new, Series 39, Regulated, Vertical Frequency Converter combines the "No-Brush" permanent magnet generator together with control windings and simplified sensing electronics, to provide both the traditional "Brushless" rugged design and a closely regulated 400 Hz power system. Voltage regulation is ± 1.5% no load to full load, 0.8 to 1.0 power factor, with a voltage adjustment feature of ± 5%.

| MODEL NO. | KVA RATING | VOLTAGE OUTPUT | VOLTAGE REGULATION | PHASE IN/OUT |
|---|---|---|---|---|
| 39-001 | 5 | 120/208 | ±1.5% | 3/3 |
| 39-002 | 5 | 115/230 | ±1.5% | 3/1 |
| 39-004 | 6.5 | 120/208 | ±1.5% | 3/3 |



**60 TO 180 Hz, 360 Hz, 840 Hz**
**FREQUENCY CONVERTERS**
**FOR HIGH FREQUENCY**
**TOOLS, MOTORS, AND LIGHTING**

These frequency converters are available for powering high frequency metal-working tools, wood-working tools, motors, and lighting systems. The highly dependable, minimum maintenance, PERMANENT MAGNET BRUSHLESS DESIGNS are available in many ratings up to: 5 KVA for 180 Hz applications; 10 KVA for 360 Hz applications; and 30 KVA for 840 Hz applications.

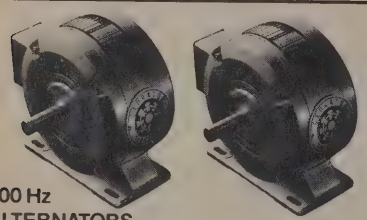
# GEORATOR™ CORPORATION
# PERMANENT MAGNET ALTERNATORS

## FEATURES:

- ☐ High Efficiency
- ☐ Excellent Wave Form
- ☐ Stable Output Voltage
- ☐ Short Circuit Immunity
- ☐ High Overload Capacity
- ☐ Essentially "0" RF Noise
- ☐ Brushless
- ☐ Compact Design
- ☐ Cool Operation



**400 Hz**
**ALTERNATORS**
**PERMANENT MAGNET**

The original, revolutionary, "NoBrush" generator. Permanent magnets yield stability, reproducibility, ruggedness and virtually zero R.F. noise. Available in large variety of ratings, frequencies and voltages. Supplementary windings with rectifiers available for D.C. output.

**400 Hz ALTERNATORS**

| Model No. | KVA Rating | Phase Out | Speed RPM | Dimensions H"/L"/Weight |
|---|---|---|---|---|
| 36-001 | 0.25 | 1 | 3428 | 8¼"/4 1/16"/17 lbs. |
| 36-003 | 0.5 | 1 | 3428 | 8¼"/4 1/16"/22 lbs. |

| 36-152 | 25.0 | 3 | 1714 | 25.3"/17"/730 lbs. |

- ☐ Alternator Frequencies Available Include: 50, 60, 120, 180, 240, 300, 360, 420, 840 and 1000 Hz.
- ☐ All Units are Available with:
  - Standard and Non-Standard AC Voltages.
  - Multiple DC Outputs/Low Voltage taps.
  - Special Housings for Flange Mountings.
  - Double Shafts.
  - Militarized Construction.

**60 Hz ALTERNATORS**
**50 Hz ALTERNATORS**
**PERMANENT MAGNET**

These industrial type generators provide output voltage stability within ±1% for constant load and constant driving speed (from cold to hot and ambient temperatures of −20° F to 130° F).

| Model No. | KVA Rating | Phase Out | Output Voltage Nominal | Frequency Hz | Speed RPM | Dimensions H"L"/Weight |
|---|---|---|---|---|---|---|
| 36-138 | 0.5 | 1 | 115/230 | 60 | 1800 | 12/10.3/90 lbs. |
| 36-103 | 1.0 | 3 | 120/208 | 60 | 1800 | 12/10.3/90 lbs. |
| 36-021 | 1.5 | 1 | 115/230 | 60 | 1800 | 14/19/185 lbs. |

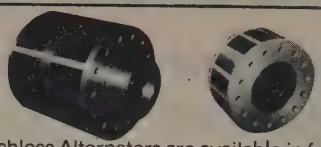
| 36-154 | 10.0 | 3 | 120 | 60 | 3600 | 18/25/753 lbs. |

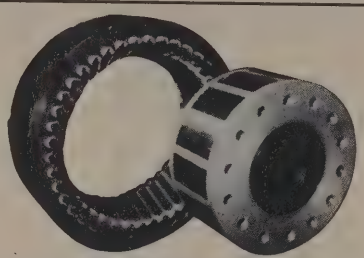
- ☐ All units listed are available with 50 Hz output.



## APPLICATIONS:

Permanent Magnet Brushless Alternators are available in frequencies up to 1,000 Hz and in power ratings from 150 VA to 25 KVA. Wherever a rugged, continuous duty, industrial type long life generator is required for:

- Special industrial applications 120 Hz, 180 Hz, 360 Hz.
- High frequency power up to 1,000 Hz.
- Low frequency power 60 Hz, 50 Hz or lower.
- Variable frequency....
- Electrical power source in hazardous locations.
- Military 400 Hz electronic equipment.
- Source of multiple AC outputs for rectification to DC power.
- Power static exciter—voltage regulators of large engine generators.
- Pilot excitation and field flashing of large generators.
- Tachometer feedback for large rotating apparatus.
- Lighting Systems.
- Electric brake excitation.
- Power for process control equipment in hazardous environments.
- Special vehicular applications.
- As computer peripheral rotating power supply providing basic power, line isolation, ride through, and multiple outputs.



**ROTORS AND STATORS**

Separate permanent magnet rotors and stators are available for a wide range of OEM applications engineered to fit customer shaft or shaft extensions. From speeds as low as 720 RPM to 12,000 RPM in selected ratings. In power ratings from 50 VA to 25 KVA.

**TOTALLY ENCLOSED AND EXPLOSION PROOF**

Totally enclosed and explosion proof designs are available in selected ratings. Some typical units are:

| Model No. | KVA Rating | Phase Out | Voltage Out | Frequency/ RPM | Description |
|---|---|---|---|---|---|
| 36-168 | 1.5 | 1 | 120 | 60 Hz/1800 | Totally enclosed. |
| 36-173 | 1.5 | 1 | 115/230 | 60 Hz/1800 | Explosion Proof. |

**FLANGE MOUNTED ROTORS AND STATORS**

Cast aluminum alloy housings to fit on customer stub shaft.

**SPECIAL PM DESIGNS**

Examples of special 2 bearing units of unique industrial application-

| Model No. | Rating | Phase Out | Voltage Out | Description |
|---|---|---|---|---|
| 36-094 | 165 watts | DC | 5, 12, 24, 48 VDC | Multiple DC outputs for computer peripheral. |
| 36-169 | 2.5 KVA | 1ø | 240 VAC | 1000 Hz, 4286 RPM Unique Industrial Application. |
| 36-167 | 3.0 KVA | 3ø | 115/200 VAC | 200 Hz, 3000 RPM Vehicular application. |

# Powertron SOLID STATE AC POWER SUPPLIES

**The Powertron AC Power Supplies provide stable, low distortion, AC power at frequencies within the audio frequency spectrum. These highly reliable and versatile power sources find wide application in calibration and test stations, motor drives, gyro wheel supplies, laboratory use, military component testing, and operating foreign equipment. These supplies may be used whenever it is necessary to provide AC power at a frequency not available from the power lines.**

**The various supplies feature all solid state construction, wide operating frequency range, low distortion, and a wide variety of output voltages and impedances. The units are designed to be used in modular form so that a single unit can provide single phase output, and two or three units may be used to provide two phase or three phase outputs respectively.**

## AMPLIFIER SPECIFICATIONS

(Series 250S, Illustrated)

**Output Circuit:**
Single phase, isolated (Ground terminal is provided for optional grounding of output.)

**Output Power:**
250 VA

**Load Power Factor:**
.7 Lead through .7 Lag for full power output. Useable to .2 at reduced power.

**Output Voltage Range:**
0-130 V RMS (An output connector provided at the rear of the unit may readily be reconnected to provide optimum power output at other voltages. Ranges available are 0-260 V, 0-190 V, 0-130 V, 0-90 V, 0-75 V, 0-67 V, 0-60 V, 0-38 V, 0-30 V, and 0-17 V.

**Output Frequency Range:**
45 Hz to 10,000 Hz for full power out. 20 Hz to 20,000 Hz at reduced power.

**Output Distortion:**
0.1% mid band

**Load Regulation:**
Factory set to ±0.5% mid band (A control is provided for zero regulation adjustment over most of frequency range.)

**Line Regulation:**
±0.1% for ±5% line change.

**Transient Response:**
50 Microseconds.

**Hum Level:**
80 db approx. below rated output voltage.

**Thermal Overload Protection:**
Output transistors protected by thermal cut-out circuit.

**Short Circuit Protection:**
Output may be shorted indefinitely without damage to unit.

**External Amplifier Input:**
An input connector is provided at the rear of the unit when it is desired to drive the amplifier from an external source. Model XA-1 plug-in Module is required for this mode of operation.

**External Sync. Input:**
An input connector is provided at the rear when it is desired to synchronize the plug in oscillator with an external frequency source.

**Convenience Outlets:**
Two convenience outlets controlled by the power switch are provided at the rear of the unit. These permit single control operation of one or two additional amplifiers when 2ø or 3ø outputs are required. When not used for this purpose, the outlets may also be used to turn on auxiliary equipment which is mounted in the same test console.

**Meter:**
A voltmeter with range of 0-150 V RMS is provided to monitor the output voltage.

**Input Power:**
115 V or 230 V, 50-60 Hz (400 Hz input available).

**Ambient Temperature Range:**
0° C to 55° C.

**Dimensions:**
5¼ x 19" Rack Panel x 14" Deep.

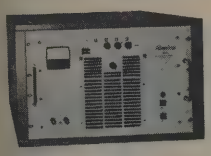
**Weight:**
75 Lbs. Approx.

---

The ordering designations listed below are for convenience of specifying the components required for various power supply configurations. To select an appropriate unit for your requirements first determine which category, 1-phase, 2-phase, or 3-phase, is most suitable to your intended load.

Then use the ordering designation adjacent to the required output power within that category. For the complete ordering designation replace the asterisk with the ordering code letters of the plug-in-oscillator listed

## 1Ø Power Supplies (For Use with Single Phase Loads)



Model 1000S-1-N

| Ordering Designation | Total Output Power | Output Voltage Range | Input |

## PLUG-IN OSCILLATORS

Single phase (1ø) and polyphase (Pø) oscillators are available for both fixed frequency and variable frequency output. A coarse and fine concentric control is included on each oscillator panel for precise amplitude adjustment. Polyphase oscillators include a switch on the front panel which provides either two-phase or three-phase output. All plug-in oscillators are provided with Sync. capability which permits locking-in their output frequency with an external source of the same nominal frequency.

| CODE | | FREQUENCY | ACCURACY |
|---|---|---|---|
| Single Phase | Poly Phase | | |
| A | AA | 400 Hz | 0.1% |
| B | BB | 60 Hz | 0.1% |
| C | CC | Specify | 0.1% |
| D | DD | Specify | 0.01% |
| E | EE | Specify | 0.001% |
| K | KK | 10 Hz - 10 KHz | 1.0% |
| L | LL | 10 Hz - 100 Hz | 1.0% |
| M | MM | 100 Hz - 1 KHz | 1.0% |
| N | NN | 350 Hz - 450 Hz | 0.25% |
| P | PP | 300 Hz - 500 Hz | 0.25% |
| Q | QQ | 1 KHz - 10 KHz | 1.0% |

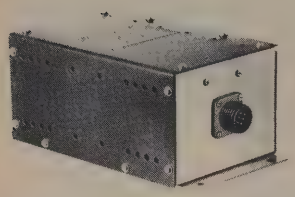
# 400 Hz STATIC INVERTER — SPC SERIES



The KGS ELECTRONICS' static inverter utilizes solid state circuitry to convert 28 VDC to 115 VAC, 400 Hz sine wave power. Design features include pulse-width modulated square to sine wave power conversion permitting lightweight and reliable operation.

The SPC Series are capable of delivering an overload of 150% of rated current for a duration not less than five minutes under all environmental conditions.

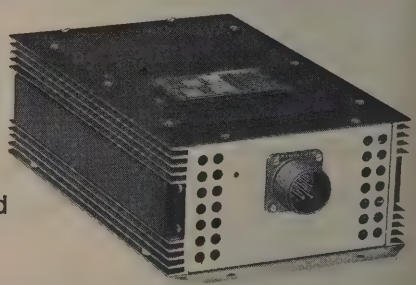
GENERAL SPECIFICATIONS

| | |
|---|---|
| Input Voltage: | 1. 22 to 32 VDC<br>2. Withstands 88 Volt Transient for 1 Millisecond |
| Power Factor: | .8 to −.95 |
| Amplitude Distortion: | Less than 7% |
| Wave Form: | Sine Wave |
| Phase: | Single |
| Short-Circuit: | Withstand for 1 minute |
| Temperature: | −65°F to +160°F (−55°C to +70°C) |
| Altitude: | 45,000 ft. |
| Efficiency: | 75% typical |
| Input Overvoltage: | Withstand 130% input overvoltage for 5 minutes while supplying full rated VA output power. Output voltage under this condition 115 VAC +5% −7%. |
| Input Voltage Protection: | Inverter withstands transients of 88 volts lasting 1 millisecond on the 28.0 VDC input line. |
| Overload Capacity: | Capable of 150% output current overload for at least 5 minutes. |
| Excessive Overload and Output Short Circuits: | Withstand without damage or degradation loads exceeding 150% of rated output to an output short circuit. Inverter delivers rated output on removal of above condition. |
| Humidity: | Withstand greater than 95% for ten days, temperature was cycled between 75°F to 160°F. |
| Environmental: | Designed to meet RTCA DO-160 Env. Cat. D2ZAR - - - |

| Model | Output Voltages VAC | Output Power VA | Freq. Hz | Input Current ADC | Weight Lbs. (Kg) |
|---|---|---|---|---|---|
| SPC-7 | 26/115 | 70 | 400 ±1% | 3.2 | 5.0 (2.3) |
| SPC-10 | 115/26 | 100 | 400 ±1% | 5.2 | 5.2 (2.4) |

# 60 Hz/50 Hz STATIC INVERTER

These inverters are particularly applicable as a source of 60 Hz power for the operation of Projectors, Tape Recorders, TV Systems, Medical Equipment, Spectrometers, Typewriters, on Aircraft that have a 28 VDC electrical system. For applications requiring greater power the inverters can be paralleled for higher output.



The inverters available in other voltages, frequency and power are listed in the table below.

GENERAL SPECIFICATIONS

| | |
|---|---|
| Input Voltage: | 1. 28 VDC ±2 volts<br>2. Withstands 88 Volt Transient for 1 Millisecond |
| Power Factor: | .8 to 1.0 |
| Amplitude Distortion: | Less than 7% |
| Wave Form: | Sine Wave |
| Phase: | Single |
| Short-Circuit: | Withstand for 1 minute or longer |
| Temperature: | −65°F to +160°F (−55°C to +70°C) |
| Altitude: | 45,000 ft. |

| Model | Output Voltages VAC | Output Power VA | Freq. Hz | Input Current ADC | Weight Lbs. (Kg) |

Since 1959, KGS Electronics has specialized in the design and manufacture of power conversion and magnetic components for aerospace, government, and consumer applications. Included in our output are: Power Supplies, AC Static Inverters, Regulated and Unregulated Power Converters, Line Stabilizers, Power Boosters, Power Boost Isolators, Transformers, UL 544 Medical Isolation Transformers and other related equipment.

Please write for complete and latest information on products in which you are interested, and also see our ads on P. 3273 and P. 4422, **eem**, Vol. 2, 77/78 issue.

CML MACARR®

POWER SUPPORT EQUIPMENT

NEW!

# uninterruptible power supplies

## PEP™ portable electric power

The CML MACARR PEP SYSTEM is a completely self-contained, regulated mobile electric power source. It provides regulated, portable electric power wherever needed and eliminates the need for duplicating expensive instrumentation at more than one location. Now, sophisticated equipment, (such as mini-computers, etc.) may be moved around without the loss of memory or the troublesome turn-on, turn-off transients when relocating instrumentation. In addition, this system is **UNINTERRUPTIBLE,** providing up to one and one half hour of built-in power in the event of a power interruption.

The PEP Mobile Uninterruptible Unit comes complete with stainless steel cart as illustrated.

### Applications

- Mini-computers — memory banks
- Microprocessors
- Chemical and other process control
- Monitoring equipment

### Features

- Protects sensitive instrumentation during power line disturbances
- Absorbs line transients
- Regulates fluctuating line voltages
- Provides undistorted sine wave
- Smoothes line clips and spikes

### Specifications

**Input:** 115V ±10% 57-63 Hz 1φ

**Output:** 115V ±5% at rated power or current 60 Hz ±.5 Hz

**Voltage Regulation:** ±1.0% NL-FL

**Power Factor:** .8 lead or lag

**Harmonic Distortion:** Less than 3% @ full load

**Frequency Stability:** ±.25%

**Operating Temperature:** 20°C to 40°C

**Battery:** Maintenance-free, sealed. Back up for 30 minutes at rated load. Option to 8 hrs. on special order.

**Overload Rating:** 110% 15 min.
150% 5 sec.
200% 5 cycles

**Internal Battery Charger:** Capable of restoring battery in full charge in a maximum of 16 hours on standard models.

### Operation

For easy operation, a Status Panel on the unit consisting of:

1. Low Voltage Warning — Flashing light when approximately 5 minutes of power is left in battery at rated load.
2. AC Bypass Switch — Connects AC line input directly to AC output receptacle.
3. Battery Monitor — Show in minutes the ampere hours left in battery under any load condition.
4. Battery Test Switch — Allows for periodic check and calibration of battery monitor to assure readout is consistent with condition of the battery.

In addition two AC convenience outlets are provided for easy connection of equipment plus a 10 ft. long retractable AC cord.

### STANDARD MODELS — 115V 60 Hz

| TT6000 | 6000 | 208/230 3φ 47-63 Hz | 17½ x 19 x 20 | 225 lbs. |
| TT12000 | 12000 | 208/230 3φ 47-63 Hz | 32 x 19 x 20 | 340 lbs. |

### Ordering Information

To specify give model number and option code number as shown below. For example: 500VA single phase 45-66 Hz. Model ST500-01 Add (-VA) for Voltmeter and Ammeter on Model ST250.

| Frequency | Code | Mode |
|---|---|---|
| 45-66 Hz | -01 | variable |
| 320-460 Hz | -02 | variable |
| 45-66 Hz and 320-460 Hz | -03 | 2 range variable |
| 50 Hz | -50 | fixed |
| 60 Hz | -60 | fixed |
| 400 Hz | -41 | fixed |

- High Efficiency 75% Typical
- Rack Mount Construction
- Versatility — may be used as a Frequency Converter or Precision AC Power Source
- Output Voltage Range: 105-130VAC
- Output Frequency Range: 45-460 Hz at Full Rated Output
- Modular Power Transistor Assemblies

### Specifications

**OUTPUT CONFIGURATION:** Single phase — two wire isolated. Three phase — four wire WYE with floating neutral and taps for delta load.

**INPUT CONFIGURATION:** 115/230 ±10% 1φ 47-63 Hz all models thru 1KVA, others 208/230 ±10% 3φ 47-63 Hz. Special voltages available at slight extra cost.

**OUTPUT VOLTAGE:** Single phase, 105-130V @ full power. Three phase, 105-130V/185-225V line to line, or line to neutral @ full power.

**VOLTAGE ADJUSTMENT:** Internally adjustable. Optional front panel mounted (add -P to Model No.).

**PHASE DISPLACEMENTS:** Three phase units 3° with balanced loads.

**LOAD POWER FACTOR:** .7 lead or lag at rated output.

**EFFICIENCY:** 75% typical.

**VOLTAGE REGULATION:** ±1% with ±10% line, ±1% NL-FL.

**FREQUENCY STABILITY:** .25% standard, options to .001%.

**RESPONSE TIME:** Less than 200 milliseconds at 60 Hz and 100 milliseconds at 400 Hz.

**HARMONIC DISTORTION:** 4% maximum at no load, 3% at full load.

**AMBIENT TEMPERATURE:** −20°C to +50°C.

**TEMPERATURE STABILITY:** Voltage .01% per degree C typical. Frequency .05% per degree C typical.

**CONTROLS AND METERS:** All models 500VA and up include panel voltmeter and ammeter. Variable frequency models have front panel mounted frequency control dial.

**PROTECTION:** Input line circuit breaker. Current limit on output. Circuit breaker available at extra cost.

**TERMINATIONS:** Output on front and rear. Input on rear mounted barrier strip.

**CONSTRUCTION:** Standard 19″ rack mount with full dust covers. Bench adaptors available at extra cost. Add (-C) to Model No.

**FINISH:** Front panels finished in satin finish aluminum or ivory paint with black marking. Chassis surfaces are protected by clear irridite.

- Plug-In Oscillators
- Low Harmonic Distortion
- Outputs 0-65, 0-130, 260V available
- Minimum Package Sizes 200VA in 5¼" high standard rack space
- Response time 50 microseconds
- Frequency stability .25% to .001%

## Specifications

**OUTPUT CONFIGURATION:** Single phase two wire isolated. Three phase four wire. WYE with traps for Delta loads.

**OUTPUT VOLTAGE:** Single phase units, models NAS 200-500 standard; (-1) 0-130V with full power @ 105-130V. Optional; (-2) 0-65/0-130/0-260V with full power @ 55-65V/105-130V/210-260V respectively. Includes automatic range voltmeter, current readout and range indicator lights. All other models 0-130V/0-260V with full power 105-130V/210-260V. All Three Phase units — 105-130V/185-225V line to line WYE or Delta loads.

**PROTECTION:** Current overload with automatic reset. Optional current limit.

**LOAD POWER FACTOR:** .7 lead or lag.

**HARMONIC DISTORTION:** Less than .5%, 45-10 KHz @ full load. Less than 1% with plug-in oscillator.

**REGULATION:** ±.25% with ±10% input line variation ±1.0% NF-FL.

**OUTPUT PHASE SEPARATION:** 120 ±1° for fixed frequency models as well as 350-450 Hz models. 120 ±2° for 45-70 and 300-2,000 Hz models. 120 ±3° for 45-6,000 Hz models.

**NOISE LEVEL:** 70 db below rated output.

**OPERATING TEMPERATURE:** −20°C to +40°C.

**TEMPERATURE STABILITY:** Voltage .01% per degree C typical. Frequency .05% per degree C typical.

**METERS:** Models 500 VA and up include panel mounted output voltmeters. Optional at extra cost on lower power models. Add (-V) to model no.

**CONTROLS:** Output voltage and frequency controls mounted on plug-in oscillator panels where required.

**CONSTRUCTION:** Standard 19" rack mount with full dust covers. Bench adaptors available at extra cost.

**FINISH:** Front panels finished in satin finish aluminum with black marking. Chassis surfaces are protected by clear irridite.

**MODIFICATIONS AVAILABLE ON SPECIAL ORDER**

### Single Phase and Two Phase Output

Standard 3 phase power supplies may be used to provide a 2 phase output at ⅔ of rated power. An internal selector switch internally provides either 90 degrees or 120 degrees phase separation for 2 or 3 phases respectively.

Standard 3 phase power supplies may be used to provide a 1 phase output of 57% of rated power over an adjustable range of 105-130 volts.

* Model A1K and A2K are standard 19″ rack mount units; bench adapters available on special order. All other models are furnished complete in cabinet enclosures. Models A3K, S5K and B5K include casters. Models S2K and S5K are designed to go through a 25″ standard submarine hatch.

### Specifications

**FREQUENCY RESPONSE:** ±0.5 db, 100-10,000 Hz; Model A3K ±0.5 db, 200-15,000 Hz. Other frequency ranges between 5 Hz and 100 KHz available on a custom basis.

**HARMONIC DISTORTION:** Less than 3% over rated frequency range; less than 1.5% midband.

**HUM & NOISE:** At least 60 db below rated tap voltage.

## NA series 500VA to 15KVA single phase AC power supplies

**OUTPUT VOLTAGE:** Adjustable 0-125 Volts; full power available at output of 110-125 Volts.

## TA series 300VA to 20KVA three phase AC power supplies

### Single Phase & Two Phase Output

Standard 3 phase amplifiers may be used to provide a 2 phase output at ⅔ of rated output power. Special plug-in oscillators are available with selectable 90° or 120° phase separation for 2 phases or 3 phase operation respectively.
Standard 3 phase amplifiers may be used to provide a single phase output at 57% of rated output power over an adjustable voltage range of 110-125 volts.

**For Plug-in oscillators, see TAS Series.**

### Specifications

**OUTPUT CONFIGURATION:** Three Phase, 4 wire wye, neutral floating.
**OUTPUT VOLTAGE:** 0-125 Volts line-to-line and 0-217 Volts line-to-line; both sets of terminals are presented at output. Full power available at output of 110-125 volts and 190-217 volts. Master gain control and phase 2 and 3 trim controls provided on front panel.
**OUTPUT POWER:** Rated output power for each model is shown in chart. Maximum power per phase is ⅓ of 3φ output.
**LOAD POWER FACTOR:** 0.7 lead or lag to unity at rated output; wider power factor range with slight derating.
**FREQUENCY RANGE:** Each amplifier model is rated at full power 45-6,000 Hz except for the models T10000A-T20000A which have a 45-2000 Hz full power range. The operating output frequency range is determined by the particular plug-in oscillator which is used.
**HARMONIC DISTORTION:** Less than 3% over the entire 45 6,000 Hz amplifier range; less than 1%, 300-1000 Hz.
**HUM AND NOISE:** 60 db below maximum output voltage.
**OUTPUT PHASE SEPARATION:** 120 ±1° for fixed frequency models as well as 350-450 Hz models. 120 ±2° for 45-70 and 300-2,000 Hz models. 120 ±3° for 45-6,000 Hz models.
**CONSTRUCTION:** Models rated 300VA to 2500VA are standard 19″ rack mount units with full dust covers. Bench adapters available as accessories for these models; specify suffix (−C). Side support is recommended for rack mount models. Slides are available as optional accessories; specify suffix (−S). 5VA-20KVA models are furnished complete in cabinet enclosure.

## DRS series - 400 Hz

**Output:** 115V rms, Single Phase
**Input:** Standard, 22-30V DC, also available 41-55V, replace (-24) with (-48) in model no.
**Voltage & Frequency Regulation:** 0.5%

| MODEL | OUTPUT VA | DIMENSIONS H x W x D | NET WT. LBS. (APPROX.) |
|---|---|---|---|
| DRS-50A-24 | 50 | 5¼″ x 19″ x 21″ | 25 |
| DRS-100A-24 | 100 | 5¼″ x 19″ x 21″ | 30 |
| DRS-200A-24 | 200 | 5¼″ x 19″ x 21″ | 60 |

- 50 to 200VA output.
- Low distortion sine wave.
- Highly regulated.
- Reliable.
- Quiet operation.
- Overload and short circuit protection.
- Protected against input polarity reversal.
- High efficiency.
- Input to output isolation.
- No auxiliary cooling required.

## MODELS 28-UP MOBILE POWER SUPPLIES FOR AIRCRAFT

- Mobile — extremely rugged and reliable.
- Good load regulation, low ripple.
- All units feature heavy intermittent load capability.
- Easily maneuvered... large units have pneumatic tires.
- Weatherproof construction for outdoor duty.

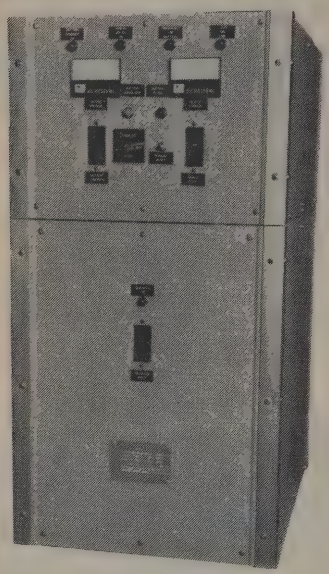
# 1ϕ UNINTERRUPTIBLE 3ϕ POWER SYSTEMS



The Nova Uninterruptible Power System is a solid state system designed to provide uninterrupted A.C. power to critical loads. Systems 2.5 KVA and up carry a THREE YEAR WARRANTY!

Nova high efficiency systems, 85% typical, minimize battery requirements. Nova systems utilize smaller battery systems than those used to power comparable competitive systems.

Small size and relatively light weight minimize floor space and floor loading.

Deliveries for many systems range from stock to 30 days.

## SPECIFICATIONS:

**Input:** 115, 230 480 VAC, 1ϕ or 3ϕ (others)
**Frequency:** 60 Hz., 50 Hz.
**Voltage Regulation:** ±1%
**Frequency Regulation:** ±0.05%
**Power Factor Range:** 0.7 lead to lag
**Distortion:** Less than 5% THD
Less than 3% Singl
**Efficiency:** 85% typical
**Temperature:** −20° to +50°C
**Current Limited**
**Thermal Protected**

## SINGLE PHASE

| KVA | MODEL | DIMENSIONS W | D | H | WT. |
|---|---|---|---|---|---|
| .5 | 11-.5K60-*† | 24 | 10 | 30 | 110 |
| 1 | 11-1K60-*† | 24 | 10 | 30 | 170 |

## 1ϕ FREQUENCY CHANGERS 3ϕ

125 VA to 30 KVA, 1ϕ and 3ϕ
115 VAC, 220 VAC, 240 VAC, others
Sine Wave Output — 50, 60, 400 Hz.
Specifications same as Inverters on opposite page.

## AVAILABLE OPTIONS

- Alarms and Alarm Contacts
- Solid State or Electro-Mechanical Transfer Switch
- Manual Bypass
- Meters
- Extended Back-up Time
- Additional Metering
- 0.05% Frequency Regulation
- Audible Alarms and Acknowledge
- NEMA Enclosures
- Battery Charger Timer
- Visual Alarm and Alarm Contacts
  - Loss of Synchronization
  - Low Output Voltage
  - Battery Charger Failure
  - Battery Charger Low Output Voltage
  - Battery Charger High Output Voltage
  - Inverter Over-Temperature
  - Charger Over-Temperature
  - Output Overload
  - Transfer Switch Position
- Visual Alarm and Alarm Contacts (continued)
  - Static Switch Failure
  - Ground Detection
  - Low A.C. Input
  - Battery Input Not Present
  - Low Battery
  - Load on Bypass
  - Inverter Failure
  - Fan Failure (Forced Air Cooled Models)
  - Battery Charger Float/Equalizer

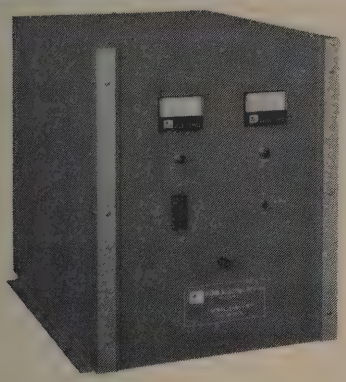
# NOVA SINE WAVE FIXED FREQUENCY INVERTERS 50 • 60 • 400 Hz



All Items on GSA Schedule Contact GS-005-04791

## SPECIFICATIONS:

**Output:**

**Voltage:** 115/230 VAC 1$\phi$ (others) 115/200, 3$\phi$ (others)

**Voltage Regulation:** ±1% for line or load

**Voltage Adjustment Range:** ±10% of nominal

**Frequency Regulation:** ±0.15% for line and load

**Frequency Adjustment Range:** ±5% of nominal

**Frequency/Temperature Coefficient:** 0.01% per °C.

**Transient Response:** less than 50 mSec for 100% Load Change

**Maximum Distortion:** less than 5%

**Efficiency:** 75% (except 12 and 24 volt models) 90%-2.5 KVA and up

**Load Power Factor:** .7 lead or lag

## CIRCUIT PROTECTION:

Reverse input polarity protection
Short circuit protection
Output automatic current limited
Thermal protected

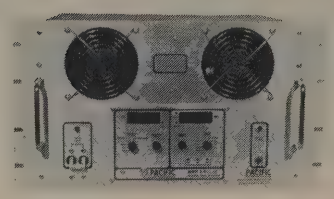
# PACIFIC

## K SERIES | BENCH-TOP & OEM AC POWER SOURCES



PACIFIC "K" series machines are linear AC power sources in light-weight one-man-portable cases for laboratory or rack mount OEM use. The 'K' series power range is 250 to 4500 VA output in single phase, 3 phase DELTA and 3 phase WYE configurations.

Output characteristics are as described under POWER AMPLIFIERS on the opposite page. Control characteristics are determined by the plug-in oscillator selected.

## "D" SUFFIX DIGITAL OSCILLATORS

The "D" module is recommended for all variable 3 phase applications and single phase applications requiring a high degree of control versatility.

The digital signal generator forms both single and three phase vectors from a common high frequency clock. It produces sinusoidal waveforms of exceptional purity and stability over a wide range of frequencies.

The "D" signal generators include two 3½ digit 0.6" LED readouts. The first monitors frequency continuously; the other is switch selectable to read volts or amps of any phase. Special frequency control ranges and digital control interface can be supplied to users special requirements.

**Frequency Control**: Two continuously variable ranges 20-200 and 200-2000 Hz, plus three precision fixed frequencies at 50, 60, 400 Hz, or at other user specified frequencies.

NOTE: Units with internal autoformer. Model numbers with suffix D will have the low frequency range restricted to 45 Hz and the high frequency range restricted to 500 Hz.

**Amplitude Control**: Continuously variable 0 to V max. Three phase units include balance controls for each phase with a range of ± 10%.

**Phase Separation Accuracy**: ± 1° max (3Ø units only).

**Signal Distortion**: 0.25% max.

**Amplitude Stability**: 0.01% per °C.

**Frequency Stability**: 0.01% per °C.

**Freq. Meter Accuracy**: 0.25% ± 1 digit.

**Freq. Meter Resolution**: 0.1 Hz on 20-200 range; 1.0 Hz on 200-2000 range.

**Voltmeter Function**: Nine position function switch permits user to monitor volts any phase to neutral, volts phase to phase and amps any phase.

**Voltmeter Accuracy**: 0.25% ± 1 digit.

**Ammeter Accuracy**: 5.0%.

## "V" SUFFIX VARIABLE OSCILLATORS

The "V" module consists of a FET stabilized, dual range variable, linear oscillator. Its two frequency ranges are centered around the popular power frequencies, continuously variable by multiturn control and calibrated frequency dial. The module includes a panel voltmeter which monitors output voltage.

This module is recommended for single phase power sources where only narrow range frequency control is required.

**Frequency Control**: Two continuously variable ranges 45 to 75 Hz and 300 to 500 Hz.

**Dial Accuracy**: 1%.

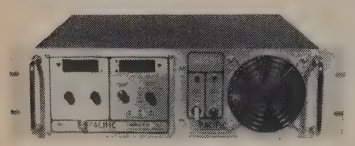
**Frequency Stability**: 0.01% per °C.

**Amplitude Control**: 0 to V max by panel control.

**Voltmeter Accuracy**: 3%.

**Distortion**: 0.25% max.

**External Input**: Allows the power source to be used as an amplifier only. Gain = 100, BW = 20-2000 Hz full scale, 5-20,000 Hz small signal. Input impedance 600 ohms.



## "F" SUFFIX FIXED OSCILLATORS

The "F" suffix module provides a single fixed frequency' specified by the user. High stability frequency determining components are used as well as a FET stabilized amplitude control loop. This module is recommended for fixed parameter, low cost OEM, and all unattended use applications requiring high long term stability.

Panel voltmeter (3% accuracy) is included in both single and 3 phase versions.

**Frequency Control**: Fixed, as specified by user within the range 20-2000 Hz.

**Amplitude Control**: 0 to V max by panel control with locknut.

**Frequency Stability**: 0.01% per °C.

**Amplitude Stability**: 0.003% per °C.

**Distortion**: 0.25% max.

**Phase Angle Accuracy**: 1° (3Ø units only).

**Balance Controls**: ± 5% control range, adjustable through front panel (3Ø units only).

## "X" SUFFIX AMPLIFIER ADAPTER

The "X" suffix adapter allows any power source to be used as a wide-band linear amplifier. Input signal is applied through a front panel BNC connector to a small signal audio transformer. Input is isolated from chassis and amplifier output.

**Gain** = 125

**Bandwidth** = 20-2000 Hz full power; 5Hz-20,000 Hz Small Signal

**Input Impedance** = 50 ohms

## "K" SERIES POWER AMPLIFIERS

All "K" series machines use identical output stages except for power level. The power amplifier section is a wide band direct coupled output linear amplifier. The amplifier is designed to operate from a 5 vrms signal from the signal generator module.

**Input Power**: 105-125 VAC 1Ø 47-63 Hz. May be reconnected for any of the following inputs: 210-250 VAC, 95-115 VAC, 190-230 VAC.

**Output Voltage**: See model listings.

—R models produce output vectors of 0-125 VAC 1Ø or 0-125 VAC L-N if 3Ø WYE, or 0-125 VAC L-L if 3Ø DELTA.

—S models produce a balanced output (2 vectors 180° apart) of 125-0-125 VAC, plus a 250 VAC output.

—T models produce a 0-125 VAC vector, plus 0-250 VAC through an output autoformer. Both outputs may be loaded simultaneously. Other autoformer tap voltages as specified by user. T model frequency range limited to 45-500 Hz.

**Line Regulation**: 0.1% max.

**Load Regulation**: 0.25% max. at amplifier output terminals. (May be higher at transformer tap points.)

The specifications below describe overall output characteristics, when driven by any of the oscillator modules listed.

**Distortion**: 0.25% amplifier only, 0.5% max. combined distortion of signal generator and amplifier.

**Load Power Factor**: Full Power ÷ 0.7.

**Peak Overcurrent**: Approximately three times rms current available at crest of output sine wave.

**Bandwidth**: 20-2000 Hz Full Power; 5-20,000 Hz small signal.

**Transient Response**: 30 microseconds.

**Output Control**: Panel switch for On-Off control.

**Output Protection**: Protected against overloads and shorts with automatic recovery.

**Output Reference**: Floating. Any output terminal may be tied to chassis.

**Efficiency**: 65% at maximum undistorted output voltage.

**Temperature Range**: 0-55° C operating.

## MECHANICAL:

All models are mounted in case A or one or more case B — as shown below. Both case sizes are equipped with rack mount tabs for installation into standard 19" racks if desired. Cooling is by self-contained fans — front intake, rear exhaust. Flow is approximately 100 CFM for case A, 200 CFM for case B.

Input power is by 6' linecord, output power available at terminal strip, both at rear of unit.

Model 315K-D

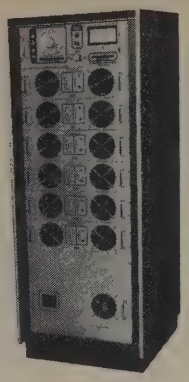
# J Series MULTI-KVA AC POWER SYSTEMS 2 to 70 KVA



# PACIFIC AC POWER SYSTEMS

Pacific's "J" Series systems are fully regulated, all solid state, linear AC Power converters, for the production of single phase, three phase delta, or three phase WYE output power.

### BASIC SYSTEM CONSTRUCTION

"J" Series power systems utilize modular construction to permit instant assembly of systems to a wide variety of configurations and power levels.

Two module types are utilized to assemble all systems: The control module which houses the oscillator and dictates the output configuration, and the requisite number of identical paralellable 1.3 KVA power modules. All are mounted in an attractive main frame, forming a complete system.

Easy servicing is insured by the fact that there are only two basic modules to be knowledgeable of, one of which (the power amplifier) has self-diagnostic circuitry which not only locates the defective device but isolates it as well, allowing the system to continue operating unaffected for servicing when convenient, thus greatly increasing the system output reliability.

## CONTROL CHARACTERISTICS

Each Pacific AC Power System is equipped with a control module. This control module contains the oscillator, dictates the output configuration and provides all of the control functions.

Control modules are available for both single and 3 phase systems.

### "B" VARIABLE CONTROL — 3 Phase

**FREQUENCY RANGE:** Continuously variable 47 to 500 Hz Accuracy ± 2%, Stability 0.25%

**FIXED FREQUENCIES:** Three pushbutton selectable fixed frequencies 50, 60 and 400 Hz or as specified by user. Accuracy ± 0.1%, Stability 0.1%. Pushbutton switches are equipped with lock button to prevent accidental changes.

**CONFIGURATION:** WYE or Delta

**METERING:** Output voltage, pushbutton selectable phases A, B and C to Neutral and A to B, B to C and A to C. Current meter located on each power amplifier module.

**AMPLITUDE CONTROL:** Master varies all outputs 0 to full output; ± 10% trim on each phase.

**EXTERNAL INPUTS:** One per phase allows the system to be utilized as 3 independent amplifiers.

**SIZE:** 7"H x 19"W x 17"D

**WEIGHT:** 20 lbs.

The "B" type control modules offer variable operating parameters and are intended for lab type use where a great degree of flexibility is required.

The "H" type control modules are intended for fixed parameter applications, often preferred because they prevent unauthorized changes in operating parameters.

### "B" VARIABLE CONTROL — 1 Phase

**FREQUENCY RANGE:** Continuously Variable 47 to 500 Hz. Accuracy — ± 2%, Stability — 0.25%

**FIXED FREQUENCIES:** Three pushbotton selectable fixed frequencies 50, 60 and 400 Hz or as specified by user. Accuracy — 0.1%, Stability — 0.1% Pushbutton switches are equipped with lock button to prevent accidental charges.

**EXTERNAL INPUT:** Allows unit to be used as power amplifier.

**METERING:** Output voltage current meters on each power amplifier.

**AMPLITUDE CONTROL:** 0 to full output

**SIZE:** 7"H x 19"W x 17"D

**WEIGHT:** 20 lbs.

## STANDARD MODELS

Each of the following listed models are complete systems ready for use. The control characteristics of each model are referenced for your convenience. Although these models will answer most power requirements, variations of each model are available.

## SINGLE PHASE SYSTEMS

| Model | Output Power (KVA) | Output Current (Amps) | Output Voltage Range | Control Characteristics | Frame Size |
|---|---|---|---|---|---|
| 120J-B | 2.5 | 20 | 0-130 VAC | B | 3MF |
| 120J-BT | 2.5 | 20/10 | 0-120/0-260 VAC | B | 3MF |
| 130J-B | 4 | 30 | 0-130 VAC | B | 3MF |
| 130J BT | 4 | 30/15 | 0-130/0-260 VAC | B | 3MF |
| 140J-B | 5 | 40 | 0-130 VAC | B | 6MF |
| 140J-BT | 5 | 40/20 | 0-130/0-260 VAC | B | 6MF |
| 150J-B | 6.5 | 50 | 0-130 VAC | B | 6MF |

## BASIC MODEL 113JO POWER AMPLIFIER

The Model 113-JO 1.3 KVA Power Module is the heart of Pacific's AC Power Systems. It is a completely self-contained linear power amplifier, with Pacific's disconnect feature built in. There are two disconnect features in this module, one is the self-healing circuitry which isolates and locates faulty power devices, and the other is the module disconnect which permits the entire module to disconnect. These features combined with conservative designs have provided for the ultimate in reliability.

**OUTPUT POWER:** 1.3 KVA (See chart on Page 5).
**OUTPUT VOLTAGE:** 0-130 VAC.
**OUTPUT CURRENT:** 10 amps RMS.
**OUTPUT PEAK CURRENT:** 20 amps at crest of sine wave.
**METERING:** 0-10 amps.
**AUTOMATIC DISCONNECT:** Self-healing circuitry incorporated which removes failed output device without disturbing output power or derating module capability.

**PARALLEL:** Any number of modules may be connected in parallel for increased power within a system.
**COOLING:** Forced air front intake, rear exhaust.
**SIZE:** 5¼"H x 19"W x 17"D (fits any standard 19" Rack).
**WEIGHT:** 25 lbs.

*For detailed performance specifications see system PERFORMANCE Section next page

## SYSTEM PERFORMANCE

The following specifications apply to all of the listed models, in the case of 3 phase outputs the performance parameters refer to each phase.

The control characteristics of each model are determined by the control module utilized. The model listing include a designation for control characteristics.

**VOLTAGE RANGE:** See Model Listings.
**OUTPUT CURRENT:** See Model Listings.
**OUTPUT PEAK CURRENT:** Twice rms current of sinewave for driving peak type loads such as DC power supplies.
**POWER FACTOR:** Full Power ± 0.7.
**LOAD REGULATION:** 0.25% 0-130 VAC Range— Other Ranges add 2%
**LINE REGULATION:** 0.1% Max.
**OUTPUT DISTORTION:** 0.75% Max. (Typical 0.4%).
**OUTPUT MODULATION:** 0.25% Max.
**ISOLATION:** Floating output, any output terminal may be grounded.

**OUTPUT PROTECTION:** Electronic current limiting with auto-recovery. Bypass network protects unit from transients fed back into the output terminals.
**RESPONSE TIME:** 50 microseconds.
**METERING:** Voltage—in control module. Current meter located in each 1.3 KVA module.
**COOLING:** Each module has forced air cooling. Front intake rear exhaust; top exhaust is optional.
**TEMPERATURE RANGE:** 0-55 degrees Cent.
**EFFICIENCY:** 60% max. (Varies with load P.F. and output voltage).
**LINE SURGE:** Special circuits prevent excessive line surges during turn on.
**INPUT POWER:** Almost any 1 phase or 2 phase line may be accommodated. See Main Frame Specifications.
**OUTPUT STORAGE:** Unit maintains full output when subjected to a 6 ms line power interruption.

## MAIN FRAMES

3 basic main frames are utilized for all of the "J" Series models. These main frames are used separately or may be combined for high power systems. These main frames contain mounting slides for modules, line power circuit breaker, AC and DC power distribution and space for optional equipment.

**3MF:** Houses up to 3 power amplifier modules (4KVA) and 1 control module.

**6MF:** Houses up to 6 power amplifier modules (8KVA) and 1 control module.

**9MF:** Houses up to 9 power amplifier modules (12KVA) and 1 control module.

WYE and Delta outputs may be provided for simultaneous use by the addition of a Wye to Delta transformer in the main frame. Systems of power capacity between 12 and 70 KVA are housed in multiple cabinets.

| MAIN FRAME | DIMENSIONS | WEIGHT | ACCEPTABLE INPUT POWER FORMS |
|---|---|---|---|
| 3MF | 43"HX23"WX25½"D | 370 | A B C E & F |
| 6MF | 61"HX23"WX25½"D | 575 | A B C D E & F |
| 9MF | 78"HX23"WX25½"D | 675 | A B C & D |

### INPUT POWER FORMS

| | | | |
|---|---|---|---|
| Form A. | 240 VAC ± 10% | 47 to 63 HZ | 3Ø Delta |
| Form B. | 120 VAC ± 10% | 47 to 63 HZ | 3Ø Delta |
| Form C. | 120/208 VAC ± 10% | 47 to 63 HZ | 3Ø Wye |
| Form D. | 440 VAC ± 10% | 47 to 63 HZ | 3Ø Delta |
| Form E. | 240 VAC ± 10% | 47 to 63 HZ | 1Ø |
| Form F. | 120 VAC ± 10% | 47 to 63 HZ | 1Ø |

## 3-PHASE DELTA SYSTEMS

| Model | Total Output Power KVA | Current Per Leg (Amps) | Output Voltage Range | Control Characteristics | Frame Size |

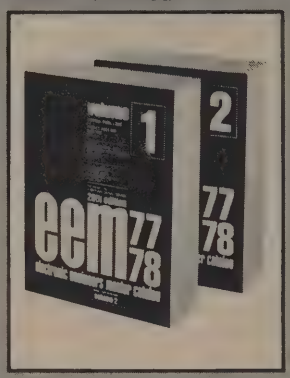
# WE KNOW OUR STUFF

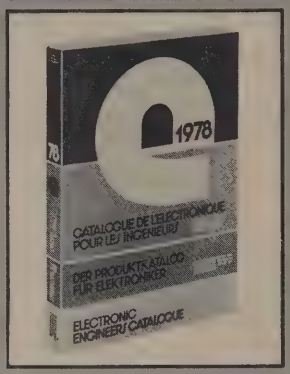
## 41 YEARS OF EXPERIENCE IN CATALOGING, 21 EDITIONS OF eem

### eem/ELECTRONIC ENGINEERS MASTER CATALOG —



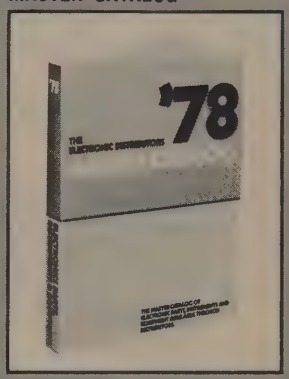
The "blue-ribbon" catalog/directory that has become "the standard of the industry" for electronic engineers, buyers and specifiers.

### ELECTRONIC ENGINEERS CATALOGUE



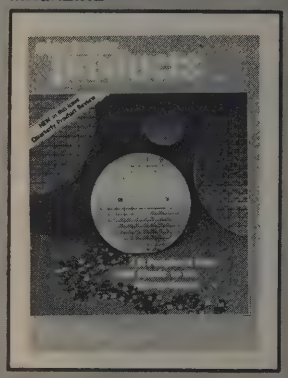
The new catalogue/directory of electronic products available to and from Western Europe and the United Kingdom. Designed especially for the European electronics engineer.

### ELECTRONIC DISTRIBUTORS MASTER CATALOG —



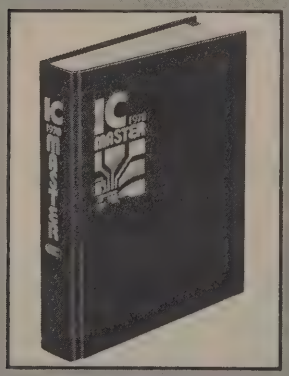
The only national catalog designed exclusively for distributors and their customers featuring electronic parts, instruments and equipment.

### ELECTRONIC PRODUCTS MAGAZINE —



The products magazine . . . A 100% product-oriented magazine including hundreds of new products and special features every month.

### IC MASTER AND THE UPDATES —



The only complete single-source directory including all IC devices manufactured in the United States. Updated three times yearly with accumulative supplements.

### eem FILE SYSTEM —

The only filing system designed especially for the electronics engineer. Instant retrieval and organization of data sheets and catalogs.

### UTP CUSTOM CATALOGS —

The Cadillac of individualized catalogs for the electronic parts distributor, featuring solely his lines and services.

### UNITED COST AND PRICING SERVICES —

The electronic distributors' proven method of being up to the minute on his cost and selling prices.

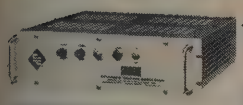
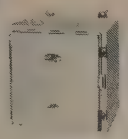
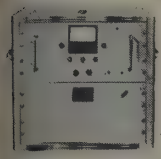
# STABILINE® automatic VOLTAGE REGULATORS



TYPE IES9101



TYPE EMT10228



TYPE EMT4115B

Deliver a constant output voltage regardless of variations in input voltage or changes in line current. Types available from 0.25 to 275 kva. Submit specifications for ratings desired but not given in the charts. Input voltage ranges shown are at nominal output voltage; input range shifts with output voltage setting.

**EMT SERIES** – Electro Mechanical Transistorized types with virtually zero waveform distortion, 47-63 hertz frequency range, very low internal impedance, negligible phase shift and efficiency approximately 99%. Rated accuracy ±.75% for all line voltage or load current variations within unit stated range. Insensitive to load magnitude and power factor; no effect on system power factor.

**EMS SERIES** – Electro Mechanical Transistorized types for heavier load requirements. Same operating characteristics as EMT Series. Units with letter I before first digit in type number have individual control for each line-to-neutral voltage.

**EMK SERIES** – Electro Mechanical Transistorized types providing faster correction times than other electromechanical models.

**IES SERIES** – Instantaneous Electronic Solid-State types having extremely fast correction, no moving parts. Will maintain output voltage within a 100 millivolt rms band for any combination of rated input voltage and/or load from 1.0 to 0 power factor lagging. Efficiency to 95%. All units have provision for remote sensing and have plug-in solid-state circuit boards.

**MILITARIZED** – Meet requirements of applicable military specifications. Type EMTH41007MH is 3½ x 6 x 4½"; type EM4108MCR fits standard 19" relay rack. Accuracy ±1.0%.

## STABILINE®
### Full Range REGULATOR CONTROLLERS

Designed for use with any motor-driven POWERSTAT Variable Transformer to provide full range regulation of a-c voltage, a-c current or d-c voltage. Output voltage will remain within a 2-volt band when used with 120 volt units and a 4-volt band when used with 240 volt models. Output current can be maintained within ±1% of maximum current setting with user supplied current transformer and Superior Electric transformer T6340. Type FR501DC and user supplied d-c power will provide regulated d-c voltage.

▲At 400 Hertz
†Also available as rack model (suffix R when ordering).
¶For 60 Hertz operation only.
*Can also be operated on an input range of 95 to 135 volts with a rating of 57 amperes, 6.6 kva and a correction rate of 0.075 seconds per volt.
§Also available as rack (suffix R when ordering) or wall mounted (suffix W when ordering) models.
‡Unit can be converted for 208 volt operation by simple tap changes. Input and output voltage ranges change proportionally.
**At nominal output. Shifts with output voltage setting but not proportionally.
††Also available in open construction (suffix U) and with screened and enclosed (suffix UT) construction.
‡‡At nominal output. Shifts proportionally with output voltage setting

**TOPAZ**
ELECTRONICS

# Topaz has the guaranteed solution to your power line problem.

Topaz manufactures a complete line of equipment for protecting electronic systems from erratic operation or failure due to power line transients, fluctuations and interruptions. Topaz devices are designed to protect sensitive equipment that requires clean, stable power for reliable operation. Equipment that should be protected by Topaz devices includes:

- Computers and computer peripherals
- Minicomputers
- Microprocessors
- Electronic cash registers
- Point-of-sale terminals
- Numerical control systems
- Process control systems
- Communications systems
- Telephone systems
- Electronic instrumentation equipment
- Life support systems
- Security systems
- Other sensitive electronic equipment

**Selecting the right Topaz protection.**
Your equipment is vulnerable to failure due to power line problems: blackouts, brownouts, lightning transients; load transients caused by air conditioners, elevators, X-ray machines, diathermies; and normal utility generated noise caused by load switching and balancing, to name a few.

Dedicated power lines and/or line filters do not solve the problem. Topaz protective devices—properly selected—deliver the quality power your equipment needs.

**Using the problem-solver table.**
The selection table lists some typical power line problems and the Topaz solution to each.

Often you may be blaming operating or service people or the equipment itself for problems that actually are caused by the power line problems listed in this table. These abnormalities can cause data processing errors, computer memory loss, computer program wipe out, false transducer and sensor readings, errors in critical processes, erratic control in control systems, false alarms, erroneous readings, system degradation and even system damage.

**The answer is Topaz protection.**
Give your equipment Topaz protection. You'll never have a power related problem again.

| PROBLEM-SOLVER TABLE | TOPAZ PROTECTIVE DEVICE | | | | | |
|---|---|---|---|---|---|---|
| POWER LINE PROBLEM | Ultra-Isolation Transformers | AC Line Regulators | Power Line Conditioners | Uninterruptible Power Systems | DC to AC Inverters | Frequency Converters |
| Lightning strikes causing up to 3000-volt transients. | ● | | ● | ● | | |
| Spikes caused by utility network switching. | ● | | ● | ● | | |
| Transients produced by operating machine tools, air conditioners, copiers, lighting systems and other office equipment. | ● | | ● | ● | | |
| Voltage fluctuations and noise caused by heavy equipment using same line. | | ● | ● | ● | | |
| Temporary outage caused by standby system startup. | | | | ● | ● | |
| Steady state voltage variations from nominal. Chronic low line voltage. | | ● | ● | ● | | |
| Voltage fluctuations caused by user-owned generators. | | ● | ● | ● | | |
| Frequency variations caused by user-owned generators. | | | | ● | | ● |
| Ringing disturbances caused by power factor correction capacitor switching carried out by your utility. | ● | | ● | ● | | |
| Undervoltages or overvoltages caused by faults and fault clearing devices. | | ● | ● | ● | | |
| Momentary power interruptions from faults or overloads on your powerline. | | | | ● | | |

TOPAZ ELECTRONICS

SHORT FORM CATALOG

# 98 Percent Efficient AC Line Regulators

## 500 VA to 100 kVA

Topaz line regulators are the smallest, lightest, most efficient, most distortion-free units of their type commercially available. They completely eliminate the inherent problems of ferroresonant devices such as low efficiency, wasted power and frequency sensitivity.

### Topaz saves money six ways.

- **Cost less to buy.** More regulator for your money.
- **Cost less to operate.** 98% efficiency means minimal power losses.
- **Cost less to install.** Less than 1/4 the size and weight of most regulators.
- **Feeder hardware costs less.** No oversize input circuit breakers and other hardware.
- **Air conditioning costs less.** One-ninth the heat loss of other line regulators.
- **Lower power factor correction costs.** Reduces need for expensive power factor correction equipment.

### Features and Benefits

**Fast Response:** Topaz AC line regulators respond to voltage fluctuations faster. Units monitor line voltage and correct for changes in less than one cycle of operating frequency.

**Low Distortion:** Less than 0.1% distortion. Other line regulators distort output waveform up to 5% and distort input waveform too. Distortion can degrade equipment performance.

**Input Power Factor:** Topaz regulators reflect the power factor of the load almost exactly. Most other line regulation techniques have a highly detrimental effect on power factor.

**Wide Input Frequency Range:** Topaz AC Line Regulators operate over input frequencies of 47-63 Hz. Ferroresonant regulators do not.

**Compact:** One-quarter the size and weight of ferroresonant transformers.

### Specifications

**Line Voltage Regulation:**
±3.3% maximum for series 73000
±5% maximum for series 75000
±7% maximum for series 77000

**Efficiency:** 98% minimum

**Operating Temperature:** 0°C to 50°C

**Temperature Coefficient:** 0.05%/°C maximum

**Output Distortion:** No spike; adds less than 0.1% Total Harmonic Distortion

**Response Time:** 1 cycle maximum

**Operating Frequency:** 47-63 Hz, sine wave

**Load Regulation:** Less than 1% from no load to full load

**Sizes** (Inches/Centimeters)

# New Topaz Line 2 Power Line Conditioners
## 1 kVA and 2 kVA

Topaz line 2 combines all the performance of Topaz AC line regulators and Topaz Ultra-Isolation Transformers together in one outstanding unit. Topaz line 2 protects against brownouts and other long-term voltage variations while it protects against transients, spikes and noise. Thus, Topaz line 2 eliminates the requirement for a dedicated power line.

### Features
- Response less than one cycle
- Negligible distortion
- Low output impedance
- 94% efficiency
- Low coupling capacitance
- 0°C to 40°C ambient temperature range
- Low audible noise of 40 dB max ANSI "A" scale

| Part No. | Output Power kVA | Input VAC | Frequency Hz | Output VAC | Weight (lb/kg) | NEMA Connector Configuration Plug | Receptacle |

# Uninterruptible Power Systems 300 VA to 15 kVA

Topaz UPS maintain continuous high-quality power to your equipment regardless of the quality or continuity of the commercial ac power line. The load is protected from instantaneous and subcycle power losses and line disturbances as well as from brownouts and blackouts. During power outages the system is supplied by a battery bank. The Topaz UPS high design reliability has been proven in thousands of installations worldwide.

### Specifications

**Inverter output:** Sinusoidal, with less than 5% total harmonic distortion. 10% voltage overshoot/undershoot for 20% instantaneous load change.

**Protection:** Input power has fuse or circuit breaker protection. Undervoltage protection on all inverters. Reverse polarity protection on all inverters. Current limiting on all chargers. Overload and short-circuit protection on all inverters.

**Automatic Load Transfer:** 25 millisecond transfer (typical). Panel light indicates that load is powered by the ac line. 4 millisecond solid state switch optional.

**Mimic Bus:** Instantaneous system status shown by red, amber, and green lights.

Rack Mount Type

Notes:
1. Sealed internal batteries are supplied as part of this model. External batteries may be connected in parallel with the internal batteries, thus extending the backup and recharge times. Battery information is available on request.
2. External batteries are not supplied with the basic system. External batteries may be procured from Topaz with the basic system or purchased from another source.

**Also available: Low Cost 300 VA Models** (†) denotes UL listed

TOPAZ ELECTRONICS

# Ultra-Isolation Noise-Suppression Transformers

## 125 VA to 130 kVA

### Guaranteed protection from power line noise.

Topaz Ultra-Isolation Noise-Suppression Transformers prevent such power line transients as voltage fluctuations and spikes caused by lightning, utility network switching, air conditioners and other noise sources from reaching your equipment. The low capacitive coupling between primary and secondary of these transformers, provided by a unique triple-box shielding technique, produces a common-mode noise rejection ratio of over *10 Million to one.* And Topaz Ultra-Isolation Transformers are guaranteed to do the job. Or your money back.

### Standard Ultra-Isolation Transformers

**Single-phase models**—All Topaz standard endbell type and encased type Ultra-Isolation Transformers are manufactured with dual-voltage primary and secondary windings and are rated for operation at either 50 or 60 Hz. For maximum versatility, the dual-voltage windings permit hookup in any combination of the listed voltages—one to one, step-up or step-down. Single-phase transformers are available in two styles:

- **Terminal Style:** Available in all power ratings. Transformers are supplied with terminals or lugs for direct-wired installations. Wiring instructions are included with each transformer.
- **Line Cord/Receptacle Style:** Available on models with power ratings through 2.4 kVA. Transformers are supplied prewired in a 120 V-120 V configuration. There is a plug on the six foot input line cord and a standard 120 V receptacle on the secondary.

  125 VA through 500 VA models have a NEMA 5-15P plug attached to the input cord and a NEMA 5-15R output receptacle.

  1 kVA models have a NEMA 5-15P input plug and a duplex NEMA 5-15R output receptacle.

  2.4 kVA models are limited to 20 amperes input and have a NEMA L5-20P twist lock input plug and a duplex NEMA 5-15R output receptacle.

**Three-phase models**—Standard models are available prewired for specified operating voltages.

**Non-standard Ultra-Isolation Transformers**—The following list includes all standard transformers. Transformers can be designed and manufactured to suit a full range of special requirements, such as 400 Hz and non-standard voltages. Please contact Topaz for additional information.

**Typical Specifications: Standard 50/60 Hz single-phase models**

**Common-Mode Noise**

**Attenuation:*** .005 pF—126 dB; .001 pF—140 dB; .0005 pF—146 dB

**Operating Voltages:** To 110% of nominal

**DC Isolation:** 1000 megohms winding-to-winding and winding-to-ground

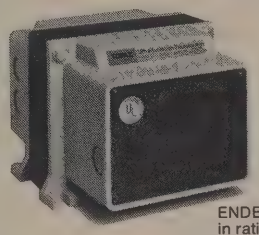
**Dielectric Strength:** 1000 VAC minimum

**Operating Frequency:** 50/60 Hz

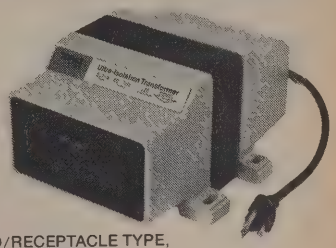
**Electromagnetic Noise:** Less than 0.10 Gauss (20 dB) at 18" distance

*for unknown noise conditions with any computer application, the .0005 pF model is recommended.

ENCASED TYPE, available in 75 to 130 kVA ratings, three-phase



ENDBELL TYPE, available in ratings from 125 VA through 5 kVA single phase



LINE CORD/RECEPTACLE TYPE, available in ratings from 125 VA through 2.4 kVA

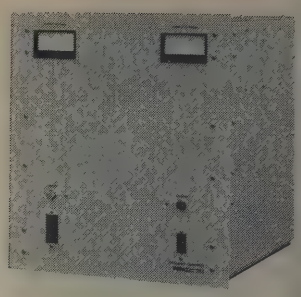
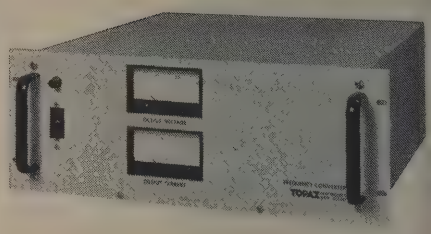
TOPAZ ELECTRONICS

# DC to AC Sine Wave Inverters Frequency Converters

## 200 VA to 30 kVA





Topaz inverters convert DC to sinusoidal AC. They can supply highly reliable AC with accurate frequency control. They are ideal for high starting current loads and loads with varying power factors. They employ circuitry which provides simplicity, higher reliability, better isolation and current limiting, good waveform shaping and inherent static voltage regulation. Topaz Frequency Converters are used to change available power frequency to 50, 60 or 400 Hz. They offer the same advantages and features as the inverters.

**Input Protection:** High and low voltage Reverse polarity

**Static Regulation:** *Line regulation* ± 1% maximum for line variations between low line and high line at half load.

*Load regulation* ±2% maximum for load variations between no load and full load at nominal line.

### General Specifications

**Frequency Stability:** ±0.5% of fixed frequency. ±0.01% optional

**Output Protection:** Overload and short circuit.

**Total Harmonic Distortion:** Less than 5% at full load and nominal line.

**Operating Temperature:** −10°C to +55°C

**Inverter Efficiency:** Typically 75% at full load.

**Recovery Time:** 50 milliseconds for 20% load change.

### Options and Accessories

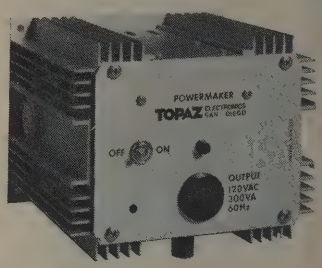
- Precision frequency control
- External frequency synchronization
- Voltage and/or current meters
- Automatic restart
- Static transfer switches (X line family only)

### Input Frequency Ranges

FZ 45 to 500 Hz (50 and 60 Hz Models)
FZ 45 to 65 Hz (400 Hz Models)
FX 48 to 420 Hz

## Powermaker Inverters

Versatile 300 VA, 60 Hz square wave inverter. Models available for operation from 12 VDC, 24 VDC and 48 VDC. 50 Hz models available.



### INVERTERS

# VARO, INC., POWER SYSTEMS DIVISION

# STATIC POWER CONVERSION EQUIPMENT
## · SHIPBOARD · HIGH VOLTAGE · AIRBORNE ·

Varo, Inc., Power Systems Division has an unusual variety of expertise in the design of highly specialized power conversion equipment. Since 1946, Varo has continually advanced the development of more reliable, smaller, lighter and more versatile power conversion equipment to meet exacting specifications for widely varied applications and environments.

Three major product areas are addressed by Power Systems —

SHIPBOARD POWER SYSTEMS *including*

- INVERTERS
- CONVERTERS
- FREQUENCY CHANGERS

HIGH VOLTAGE POWER SUPPLIES *including*

- IMAGE CONVERTER POWER SUPPLIES
- IMAGE INTENSIFIER POWER SUPPLIES

AIRBORNE POWER SYSTEMS *including*

- INVERTERS
- POWER SUPPLIES

The products shown on this page represent a sample of Power Systems' various capabilities.

## SHIPBOARD POWER SYSTEMS

Power Systems has specialized for many years in the design, development and production of ruggedized shipboard power conversion equipment. Most equipment is designed and qualified to meet the shock and vibration requirements of MIL-S-901 and MIL-STD-167. New equipment currently under development utilizes the STANDARD ELECTRONIC MODULE (SEM) concept for increased maintainability and reliability considerations.

The Model 4406 Static Inverter was developed to provide 10KVA, 400Hz power to critical shipboard navigation equipment. Provision for parallel operation with external power sources are provided with the design of the Model 4406. Modular construction and use of Standard Electronic Modules minimize down time and reduces shipboard provisioning requirements.

## HIGH VOLTAGE POWER SUPPLIES

Power Systems has produced many thousands of high voltage power supplies for image intensifier, image converter, low light TV, X-Ray, and a multitude of other low power high voltage applications. Standard power supplies for single, two and three stage 18MM, 25MM and 40MM image intensifier assemblies are available.

The Model 3258 High Voltage Power Supply shown above has been designed to operate both grounded and ungrounded cone 25mm 2nd Generation Microchannel Inverter Image Intensifier tubes (type MX-9644/UV). The Model 3258 meets or exceeds MIL-P-49090 (EL).

## AIRBORNE POWER SYSTEMS

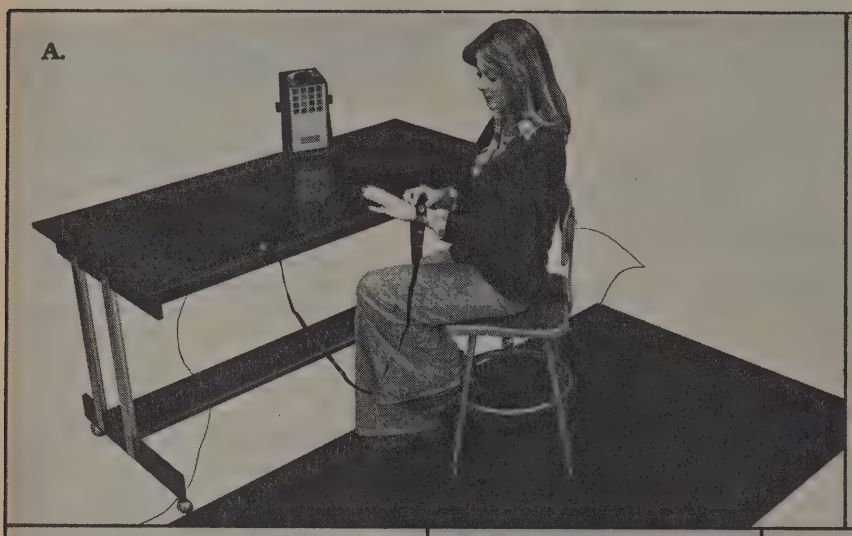
Power Systems has been an industry leader for many years in airborne power systems. Varo launched its initial product line with the development of one of the first successful static airborne inverters.

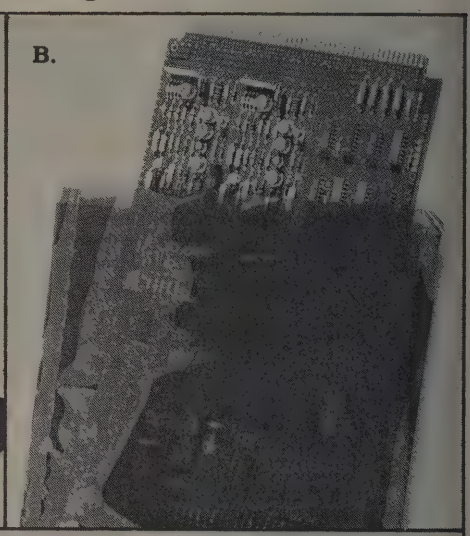
The Model 4405 Inverter/Converter illustrated above was developed to provide guidance system power for an advanced electro-optically guided missile. The Model 4405 was designed to meet requirements of MIL-STD-704 power, MIL-I-461 EMI and MIL-E-5400 environmental specifications. These military performance specifications are typical of the requirements that are met by airborne power systems developed at Power Systems.

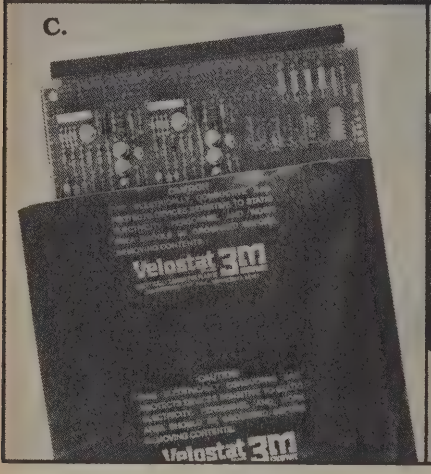
VARO®

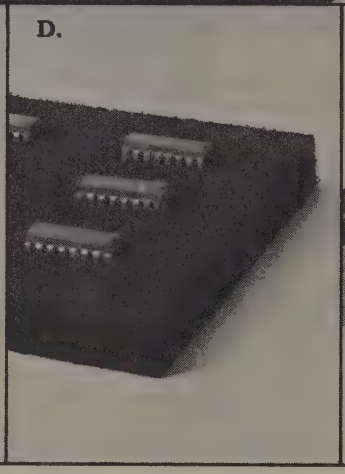
**VARO, INC., POWER SYSTEMS DIVISION.** 555 N. FIFTH ST., P.O. BOX 401267, GARLAND, TEXAS 75040 (214) 276-6141 (TWX) 910-860-5093

# 3M Static Control Systems.









**A. Safeguard Work Station Grounding Kit** This basic work station provides all the materials needed to create a static-safe work area. The kit adapts easily to most production operations including fabrication, assembly, storage, kitting, and testing of static-sensitive boards and microelectronic devices.

Included in grounding kit:

1. **Conductive Floor Mat** drains static charge from personnel and prevents static generation. Complete with grounding cord.
2. **Conductive Table Top** provides a static-free work surface. Also grounds conductive bags, carriers and equipment resting on the surface.
3. **Conductive Wrist Strap** connects personnel to ground system. Direct body contact insures personnel are kept at zero static potential.
4. **Conductive Ground Cord** connects table top to floor mat and complete system to ground.
5. **3M Model 909 Ionized Air Blower** is part of the complete Safeguard System, but is leased separately. (See next page).

Type 8003. Items above also sold separately.

**B. 3M Brand Transparent Static Shielding Bags** These bags provide the same conductive, humidity-independent protection as VELOSTAT Opaque Bags, but you can clearly see your product inside. The bags feature a puncture-resistant, high-strength metallic-coated polyester film that creates an electrostatic shield. The polyester is laminated to a heat sealable, anti-static polyethylene inner layer that prevents static charge generation inside the bag. The bags are available in many sizes, can be custom manufactured and feature convenient "J" lip design for easy opening. Type 2100.

**Standard sizes (in inches) for 3M Brand Transparent Static Shielding Bags and VELOSTAT® Brand Electrically Conductive Bags.**

| Width | Length | Width | Length |
|---|---|---|---|
| 4 | 4 | 8 | 12 |
| 3 | 5 | 10 | 12 |
| 4 | 6 | 10 | 14 |
| 5 | 8 | 11 | 15 |
| 8 | 8 | 12 | 16 |
| 5 | 10 | 12 | 18 |
| 6 | 10 | 14 | 18 |
| 8 | 10 | 15 | 18 |

**C. VELOSTAT® Brand Opaque Electrically Conductive Bags** These bags are made of VELOSTAT Conductive Film. They provide shielding from electrostatic discharge by safely enveloping static-sensitive devices and boards in a humidity-independent Faraday Cage. The effectiveness of the product is unaffected by humidity, age and most chemicals. Bags are available in many sizes and can be specially manufactured to your specifications. All VELOSTAT Bags are heat sealable. Type 2004.

**D. VELOSTAT Brand Conductive Foam** The foam provides physical and electrostatic protection for sensitive microelectronic parts. The leads can be inserted in the foam, shunted, and kept at equal potential. Cushioning prevents physical damage.

Type 1900. Thicknesses: ⅛", ¼", ⅜", ½", ¾", 1". Sold in 25" (±1") x 75" (±1") sheets. High and low density foams both available.

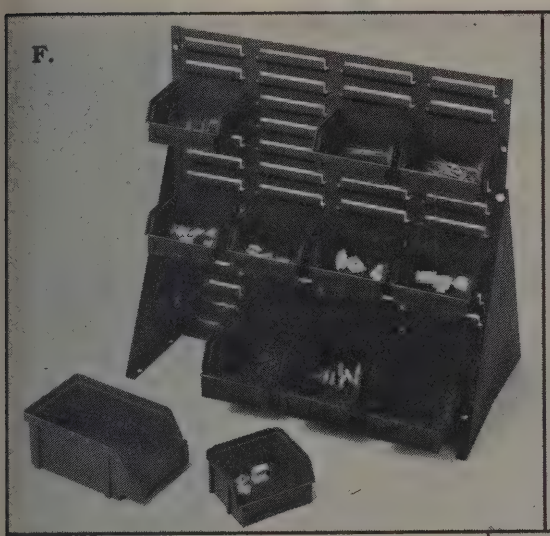
**E. VELOSTAT Brand Trays and Containers** Made of VELOSTAT Conductive Plastic, these trays are ideal for static-safe storage, kitting and shipping of microelectric devices.

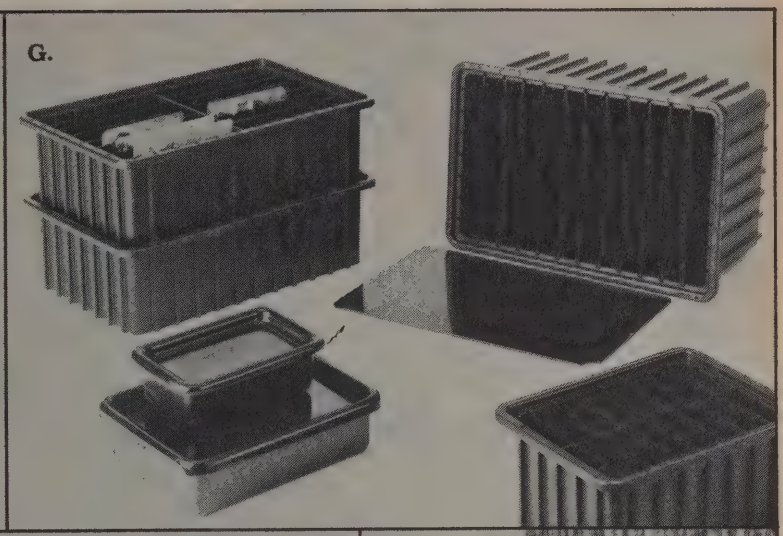
Type 4010-20 and 4061-62. Available in a variety of shapes and sizes.

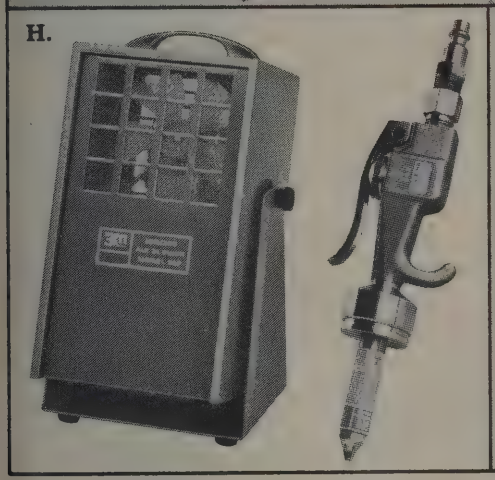
For more information phone (612) 733-9420 or write Static Control Systems, 3M Company, St. Paul, MN 55101.

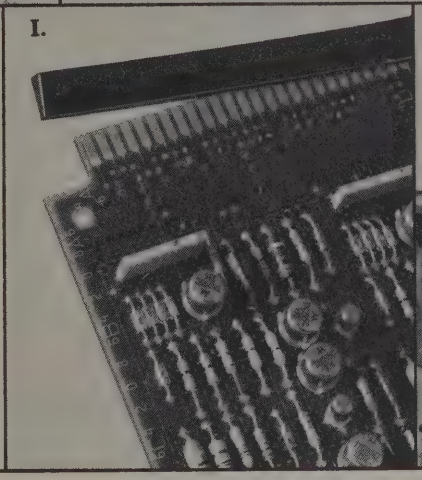
3M COMPANY

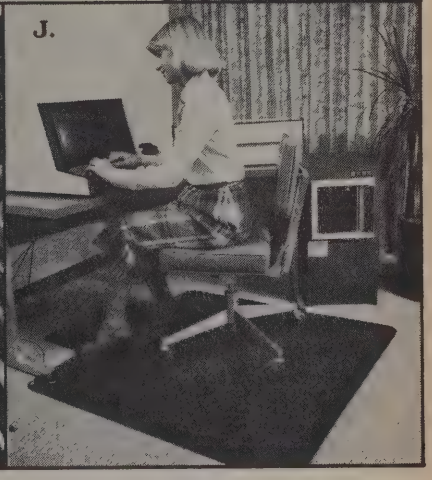
# 3M Static Control Systems.











**F. VELOSTAT Brand Conductive Parts Bins and Assembly Stands** This unit creates an organized grounded system for parts assembly. The bins have been designed with a hopper front for easy access and quick identification. They are held by a convenient bench top rack. Because they are made of conductive plastic, they will never rust, corrode, or damage contents. The arrangement of parts bins on the assembly stand can be customized to the needs of each assembly station.

Sizes: Type 4016 Small Bin. I.D. 3"L x 3⅜"W x 1¾"H. Wt. .11 lbs.

Type 4017 Large Bin. I.D. 6"L x 3½"W x 2½"H. Wt. .22 lbs.

Type 4018 Stand. 17⅝"H x 18"W x 5½"D. Holds 20 small bins or 16 large bins.

**G. VELOSTAT Brand Conductive Tote Boxes** These plastic tote boxes combine conductivity with rigidity. They are injection molded for strength with a hard formula of VELOSTAT Brand Electrically Conductive Material. Unlike heavy metal, VELOSTAT is light-weight. And unlike ordinary plastic, VELOSTAT boxes are truly conductive. Static-sensitive parts are shielded from a static charge that could blow or degrade them. For example, leads on P.C. boards can actually be shunted simply by contacting the sides of the box. Each box features a smooth finish and rib-reinforced sides. Each nests snugly in the other for stable, efficient stacking.

| INSIDE BOTTOM DIMENSIONS | | | Stacked (usable) height |
|---|---|---|---|
| Type | Length | Width | |
| 4415 | 9-3/16" | 6-9/16" | 4-1/2" |
| 4425 | 14-3/4" | 9-3/16" | 4-1/2" |
| 4428 | 14-7/8" | 9-1/4" | 7-1/2" |
| 4438 | 20-1/8" | 15-1/8 " | 7-1/2" |
| 4439 | 20-1/8" | 15-1/16" | 11-1/2" |

Slip-in dividers and covers available for most sizes.

**H. 3M Brand Air Ionizers** The 3M Ionizing Air Guns and Nozzles remove dust and static from parts and equipment and keep it from coming back. Lightweight and easy to use, they readily attach to air lines. No electricity, cords or transformers needed.

A Model 909 Ionized Air Blower bathes working areas with gentle, static-neutralizing ionized air. It eliminates static on such non-conductors as styrofoam and clothing. And it's so gentle, it won't disturb delicate parts.

**I. VELOSTAT Brand Conductive Shunt Bars** These shunt bars slip over the tabs of PC Boards to protect them from physical and static damage during soldering, insertion, assembly and shipping. The conductive shunts also tie the tabs together electrically so they are kept at equal potential.

Type 5020. Sizes: 4", 5", 6", 8", 36".

**J. VELOSTAT Brand Conductive Chair Mats** These conductive mats protect minicomputers, data entry terminals, disk drives, and all types of intelligent peripherals from memory alteration or loss due to static charge on personnel. When placed where personnel must touch the mat to use the equipment, the charge is instantly drained to ground. The rigid mat structure permits easy movement of wheeled chairs, even on plush carpeting.

Sizes: Type 1852- 24" x 32" x ⅛"
Type 1853- Overall 4' x 5' x ⅛" including 30" x 10" lip
Type 1854- 4' x 8' x ⅛"

For more information phone (612) 733-9420 or write Static Control Systems, 3M Company, St. Paul, MN 55101.

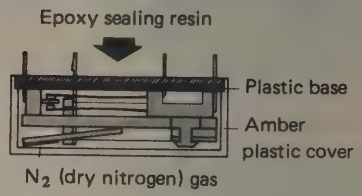
# Amber Relays NFE, KE, HCE

## What is the Amber Relay?

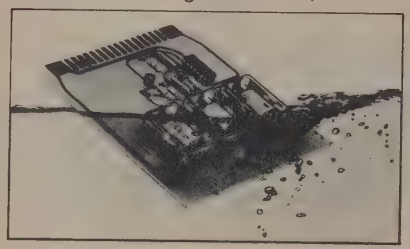
The NF, K and HC relay lines have found wide use and have proven their reliability over the past years. Nevertheless, certain applications have been restricted because of environmental factors, or because of printed circuit board fabrication processes employed. After much research and testing, the sealed versions of these relays have been developed; the Amber Relay line. These relays, with their high density seal and inert atmosphere considerably broaden the range of applications and can improve the reliability of your product at a reasonable cost.

### Sealed construction

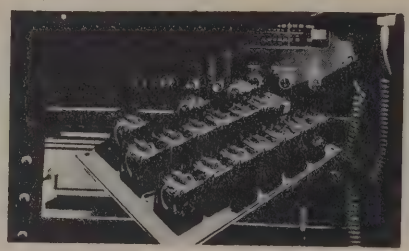


## Major Features

1. Solution to PC board soldering and cleaning problems-costly hand soldering eliminated.



2. Highly stable contact resistance maintained, even after long periods of idle use.



3. Adverse environments—where sealed amber relays perform outstandingly!

# Half-size Amber R Relays

## New kind of high speed SPDT reed relay

- High speed — up to 500 cycle/sec. operations
- Long life (mechanical) — more than $10^9$ operations
- Large contact capacity — 1A 20VDC (power)
- Low operating power — 80mW (Single side stable) 40mW (Bistable 1 coil)
- Latching type available

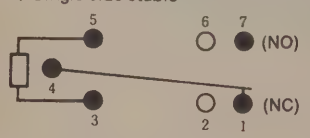
### Differences between General reed and R relays

| | General reed relays | R relays |
|---|---|---|
| Structure |   |   |
| Contact arrangement | 1NC or 1NO contact | 1NC contact |
| Contact capacity | 5 to 10W | 20W (high contact pressure) |
| Operating function | Single side stable | Single side stable<br>Latching |

### Wiring diagram

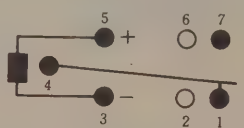
(Terminal View)
■: Energized coil □: De-energized coil

1. Single side stable



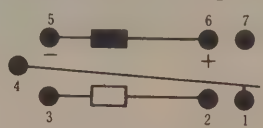
De-energized position

2. Latching: 1 coil latching

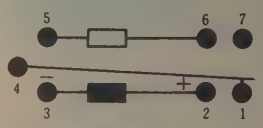


"Reset" position when terminal 5(+) and 3 (–) are energized.

3. Latching: 2 coil latching



"Reset" position when terminal 5 (–) and 6 (+) are energized.



"Reset" position when terminal 3 (–) and 2 (+) are energized.

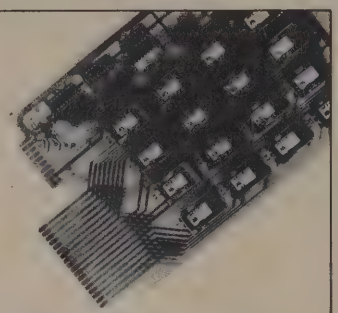
# NF Relays

## Flatpack with high sensitivity and reliability

- Low profile — stands only .402 inches high
  Ideal for high packaging density
- High sensitivity — Minimum operating
  NF2/140mW, NF4/235mW
- UL, VDE recognized
- Variety of available lines —
  Sealed Amber types
  MBB (Form D) contact types
  High breakdown voltage types for transient protection — 1,000 Vrms between open contacts, contact sets



A typical printed circuit application for microwave communication as designed by Granger Associates.

### Typical Applications

NF relays are widely acceptable in applications where small size and high sensitivity are requirements. Such applications include:

Electronic equipment, Household applications, Alarm systems, Office machines, Communication equipment, Measuring equipment, Remote control systems, General control circuits, Machine tools, Industrial machinery, etc.

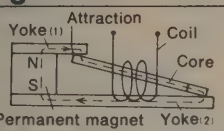
NEW

# NC Relays

## TTL compatible 5 AMP DIL relays

- Space saver – Flatpack and Lean line
- High contact capacity – 5A 250V AC
- Low operating power – 2C, 230 mW
  4C, 460 mW (Single side stable)
- Soldering flux inflow prevented by terminal location
- Latching type available
- High breakdown voltage for transient protection – 1,000 Vrms between open contacts, contact sets
- Patented in U.S.A. Patent No. 3950718

### Magnetic Structure



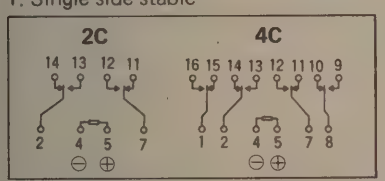
NC relays are constructed in a manner which makes the most efficient use of the magnetic forces inherent to the relay. No springs or other mechanical devices are employed to transfer contacts: all forces are magnetic, either attracting or repelling, so that no external force must be overcome for transfer. Power requirements are thereby reduced and contact release simplified. The result is greater sensitivity and reliability plus longer life.

### Wiring Diagram

(Top view)

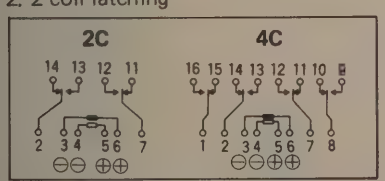
▭ De-energized coil ■ Energized coil

1. Single side stable



De-energized position

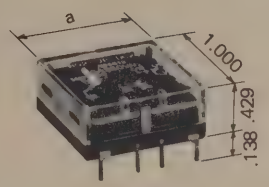
2. 2 coil latching



"Reset" position when terminals 3 and 6 are energized. Energize terminals 4 and 5 to transfer contacts.

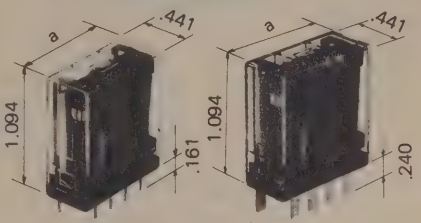
### Two Space Savibg form!

#### —Flatpack—



| | a |
|---|---|
| 2C | 1.000 |
| 4C | 1.500 |

#### —Lean line—



(P/C board) (Plug-in)

| | a |
|---|---|
| 2C | 1.000 |
| 4C | 1.500 |

#### For compact card-rack mounting

#### For high packaging density

### Ordering Nomenclature

Ex. NC | 2 | J | P | L2 | — | 6VDC

Number of contacts: 2, 4C

Shape: Nil = Lean line
J = Flatpack

Terminal arrangement:
Nil = plug-in
P = For P/C board

Operation function:
Nil = single side stable
L2 = 2 coil latching

Coil voltage:
5, 6, 12, 24, 48, 60 VDC

# NEW NT Relays

## Vertical flat power relays

- High contact capacity up to 5A 250VAC
- Sensitive relay – 140mW (DC) low operating power
- Compact size-small mounting space for high density packaging
- Long life-Mechanical: more than $10^7$ operations
  Electrical (5A 250VAC resistive): more than $2 \times 10^5$ operations
- International terminal pitch – .100 inch (2.54 mm)

# K Relays

## Uniquely designed highly sensitive relays

- Interchangeable with existing cradle relays
- 100 times more reliable through simplified design and bifurcated contacts
- Extra long life (mechanical) — more than $10^8$ operations (electrical 1A 30W) — more than $10^7$ operations
- Patented highly sensitive magnetic system
- Sealed Amber types available
- UL, CSA, VDE recognized.

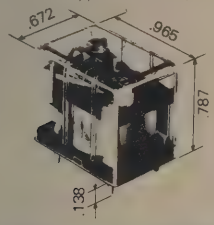
# HT Relays

## Economical, high reliability subminiature relay

- For low level load applications – Stabilized and low contact resistance
- Small size for use in limited space
- UL, CSA, VDE recognized
- Extra sensitive types available.



### Types and Data

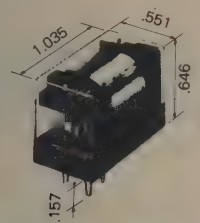
| Type | | Coils | | | Contacts | | Sugg. List Price |
|---|---|---|---|---|---|---|---|
| | | Voltage | Res. (Ω) | Nom. Power (mW) | Arrange-ment | Rating (A) | |
| HT–C– | 3VDC | 3VDC | 11 | 800 | 1C | 2 | $1.95 |
| | 6VDC | 6 | 45 | | | | 1.95 |
| | 12VDC | 12 | 180 | | | | 1.95 |
| | 24VDC | 24 | 720 | | | | 1.95 |
| | 48VDC | 48 | 3,200 | | | | 2.40 |
| HT–C– | 6VDC-1 | 6VDC | 100 | 360 | 1C | 2 | $2.15 |
| | 12VDC-1 | 12 | 400 | | | | 2.15 |
| | 24VDC-1 | 24 | 1,600 | | | | 2.15 |

**Note:** 1. AgCdO contact types are available
2. Standard packing → Carton: 100 pcs./Case: 500 pcs. or 2,000 pcs.

# NEW HA Relays

## Cost saving flux tight subminiature PC board relays

- Compact construction
- Sensitive – very low operating power
- Soldering flux inflow prevented by mold construction
- Contact capacity – 3A 250VAC, 30VDC



### Types and Data

| Type | | Coils | | | Contacts | | Sugg. List Price |
|---|---|---|---|---|---|---|---|
| | | Voltage | Res. (Ω) | Nom. Power (mW) | Arrange-ment | Rating (A) | |

# HL Relays

## 10 AMP space saving power relays

- High switching capacity in a compact size —
  SPDT (15A 125VAC),
  DPDT (10A 250VAC)
- High quality assured through advanced manufacturing techniques —
  Integral molding, Heat riveting and Spot welding
- Long life — Mechanical : more than $10^8$ operations (DC), more than $5x10^7$ operations (AC)
  Electrical: more than $5x10^5$ operations
- UL recognized.

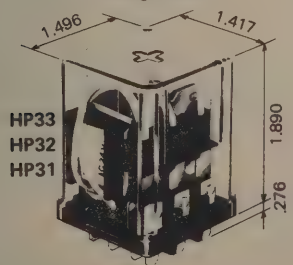
| HL2-SS | HL2-PS | 0.70 |

**Note:** HL1-PS and HL2-PS will be available in July, 1977

# HP Relays

## Highly reliable construction 10 AMP power relays

- Interchangeable with existing models
- Longer life insured by screwless assembly —
  Simplified and non-loosening molding blocks of contact spring holder and terminal base.
- High quality insured by mass production with excellent manufacturing technique
  Integral molding, Heat-riveting and Spot welding
- Versatile application of terminal for plug-in, soldering and Q.C. terminals.
- UL, CSA recognized.



# HG Relays

## Compact, large capacity relays for AC, DC application

- Up to 20A 250VAC resistive load, 1.5 KW 3 phase 220VAC motor load
- Available with plug-in, solder or QC terminals (Faston 250)
- UL, CSA recognized.

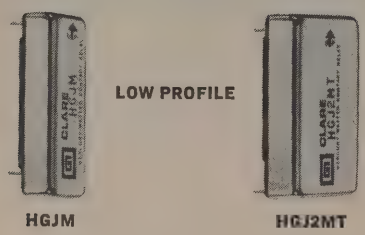
# C. P. CLARE MERCURY-WETTED CONTACT RELAYS



## HGJM HIGH SPEED MODULAR RELAYS

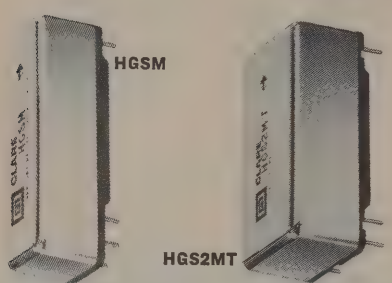
### HGJM

C. P. Clare HGJM relays have established new industry standards for quiet, fast and stable operation. HGJM Series SPDT relays have the 100VA load and multi-billion operation reliability characteristics of all our mercury relays and are recommended for all new applications. Single-side-stable and bistable adjustment is possible. Coils are available for a wide range of drive voltages.

Noise levels are less than 10$\mu$V at 5ms after coil energization (10kHz bandwidth). The relays are stable at 200Hz, with on and off times down to 2.5ms. The 1 Form C contact will switch $\mu$V, nanoampere loads to 2A or 500V loads (100VA max, ac or dc) with proper contact protection. The relays are offered in a standard height of 0.400 inches for greater sensitivity and low profile version of 0.350". Both mount on staggered 0.100" PCB grid patterns. The low profile models permit 0.5" board centers.

### HGJ2MT

C. P. Clare HGJ2MT relays feature the same outstanding electrical characteristics as the HGJM relays in a DPDT (2 Form C) package. Standard height HGJ2MT relays can have common open time durations of 50$\mu$s min. at 100Hz for capacitor transfer technique applications. Electrostatic shielding is available on all models.



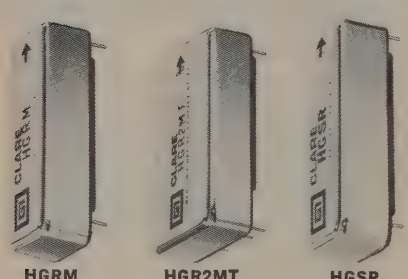
## HGSM MODULAR RELAYS

### HGSM

C. P. Clare HGSM relays are PCB mount models with 2A or 500V (100VA max. with proper contact protection) switching capabilities. The HGSM series SPDT relay is recommended for replacement applications only. New applications should specify the smaller, faster HGJM series with the same load switching capabilities, life expectancy and lower noise. The HGSM package is .640" high and mounts on staggered 0.100" grid patterns. Coils for many drive parameters and sensitivity ranges are available.

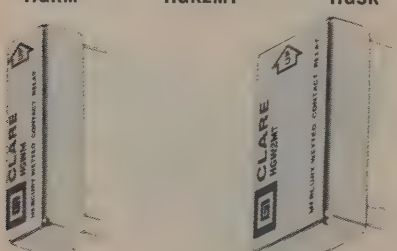
### HGS2MT

The HGS2MT relays have the same ratings and life expectancy as the HGSM series in a DPDT model. The relay is recommended for replacement purposes only.



## HGRM/HGR2MT, HGSR MODULAR RELAYS

These time proven standard mercury-wetted contact relays have 100VA, 500V or 2A maximum load characteristics and multi-billion operation reliability. The HGRM, HGR2MT and HGSR all have packages .400" high. The HGSR has staggered pins on .093" centers, and the HGRM on .100" centers.



## HGW SERIES COMPACT MODULAR RELAYS

### HGWM

The HGW series was designated for use where printed circuit board space is at a premium. Even though the package size has been reduced there has been no sacrifice in contact ratings. The HGW series has a 100VA rating and multibillion operation reliability.

### HGW2MT

The HGWM offers single-side-stable and bistable functions while the HGW2MT offers the single-side-stable function with a common open time of 50 $\mu$sec. All HGW relays mount on standard 0.100" grid patterns.

## HG SERIES PLUG-IN RELAYS

C. P. Clare HG, HG2A, HG3A and HG4A heavy duty mercury-wetted contact relays offer 1, 2, 3 or 4 Form D packages respectively in standard industrial plug-in styles. The entire series feature heavy duty 250VA, maximum, (with proper contact protection) 500V or 5A per pole maximum ratings for rugged loads. The HG series have plated steel covers which provide excellent mechanical protection and electrical shielding. The life expectancy of the HG series is 20 x $10^9$ operations.

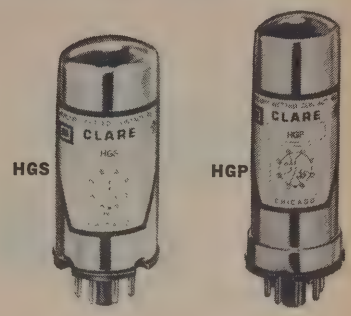
## HGS, HGP OCTAL PLUG RELAYS

### HGS

HGS mercury-wetted relays offer increased speed and reliability along with high sensitivity. The HGS 1000 Series provide SPDT make-before-break and HGS 5000 Series provide SPDT break-before-make. Both are rated at 2A, 500V and 100VA maximum with proper contact protection. The relays are available in single element assemblies for single-side-stable, bistable and chopper service. The life expectancy is 20 x $10^9$ at specified ratings.

### HGP

The HGP mercury-wetted contact relay is similar to the HG series except for the inclusion of bias magnets. The magnets provide increased sensitivity or polar operation. Contacts are SPDT make-before-break rated at 5A, 500V and 250VA maximum with proper contact protection. The life expectancy of the HGP relay is 20 x $10^9$ at the specified ratings.



## HGX SWITCH CAPSULE

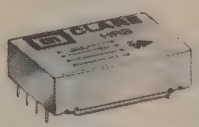
The HGX series mercury-wetted switch capsule finds use as a limit switch, float switch, stepping switch, pulse generation, and time base, or in other applications where it may be actuated by a permanent magnet.

# C. P. CLARE REED CAPSULE RELAYS

## MERCURY-WETTED REED RELAYS

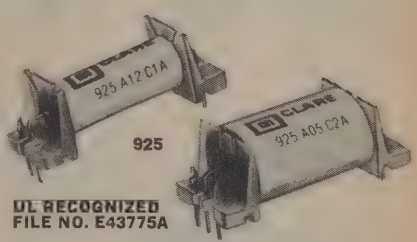
### HRB SERIES

Clare's HRB series Mercury-Wetted Microclareed Relays are superior in life and load to dry reed relays of the same size. The relay has a reliable no-bounce mercury-wetted switch capsule. Rating is 1 ampere or 350 volts, 50VA maximum. The HRB relays have molded epoxy bases with stamped metal covers and 1.00″ x .150″ grid mounting centers for printed circuit board mounting.



## 925 OPEN TYPE DRY REED RELAYS

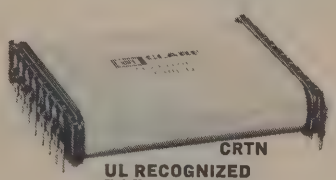
Clare's new 925 series dry reed relays utilize an economical open type construction and the reliable Microclareed® miniature dry reed switch which gives up to 10 million operations at rated load. The relay frame is formed in a single molded piece for greater strength and rigidity. The relays are available in 1 Form A, 2 Form A and 1 Form B contact arrangements with 5/6, 12, or 24Vdc coils.



UL RECOGNIZED
FILE NO. E43775A

## CRTN SERIES CLAREED® DRY REED RELAYS

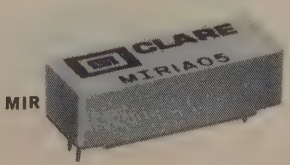
Clare's economical CRTN standard size reed relays offer signal level to 15VA power handling capabilities, total input/output isolation, and low millisecond switching speeds. CRTN relays are direct replacements for our CRT series relays. Like all Clare reed relays, they are immune to false operation and are insensitive to overload transients that affect solid state devices. Clareed relays are rated for millions of reliable, trouble free operations. Optional CRTN series contact configurations are 3 & 5 Form A, 1B or 2B, 1C or 2C, and 1A latching or 2A latching. Special relays are available with up to twelve contacts. UL recognized versions of our 1 to 12 Form A relays are available as listed in UL File E43775. The relays feature open assembly construction and PCB 2.5″ x .218″ grid mounting centers.



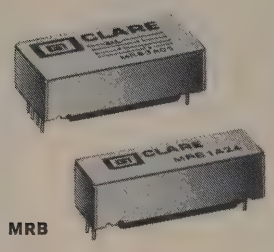
UL RECOGNIZED
FILE NO. E43775

## MIR SERIES DRY REED SUBMERSABLE RELAY

The MIR relay provides 10 watt switching capability in a low cost sealed package. Although the MIR is a sealed relay, it is not molded or potted, thus reducing the capsule stress associated with molded and potted packages. For more information, please contact our local Sales Office.



# C. P. CLARE REED CAPSULE RELAYS



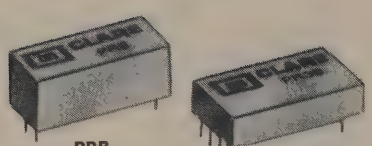
MRB

## MRB METAL COVERED MICROCLAREED® DRY REED RELAYS

Clare's MRB Microreed relays offer versatile signal level to 10VA switching capabilities, total input/output isolation, 800 microsecond typical switching speeds in the miniature sized relay family.

The MRB relays operate with coil power requirements as low as 10 milliwatts. The ultra-reliable operation will exceed 100 x $10^6$ operations at signal level loads or 100 x $10^6$ operations at the rated load.

Optional MRB relays are available in 3 or 5 Form A, 2 Form B, 3 or 4 Form C. 1A latching or 2A latching and 2A2B contact forms. UL recognized versions in all but Form C are available as listed in UL File E43775. The relays have molded epoxy bases with stamped metal covers and convenient 1.000″ x 0.100″ grid mounting centers for printed circuit board mounting. This low profile package will mount on 0.5″ PCB centers. Electrostatic shielding is available. 1.000″ x 0.150″ grid mounting models are available in 1 to 5 Form A versions.



PRB PRBH

## PRB, PRBH METAL COVERED PICOREED® DRY REED RELAYS

Clare's micro-miniature PRB and PRBH series Picoreed relays offer signal level to 10VA switching characteristics, power requirements ranging from 48 to 500 milliwatts (dependent on relay configuration) and operate times typically less than 500 microseconds in economical space saving packages. The low profile PRB series permits 0.375″ PCB mounting centers and the high sensitivity PRBH series will mount on 0.5″ PCB centers.

The 5 volt PRB/PRBH relays are fully compatible with the standard 5 volt DTL/TTL logic families and will solve many interface application problems. Both series have molded epoxy bases with stamped metal covers and mount on 0.70″ x 0.100″ grid patterns. The PRB low profile models are also available in 6 Form A, 1B and 1A1B contact configurations. Electrostatic shielding is available.

PRMA

## PRMA SERIES PICOREED DIP DRY REED RELAYS

The C. P. Clare dual-in-line package (DIP), the PRMA PICOREED relay represents a significant addition to the Clare reed relay line. The PRMA series features 5 different contact forms with an extra coil termination provided on pin 13. This provision gives greater versatility in printed circuit board layout.

The 5V one Form A is compatible with TTL logic. All contact forms of the PRMA series can be inserted into PCB using automatic insertion equipment.

# C. P. CLARE MATRIX PRODUCTS

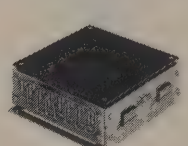


FIG. 1

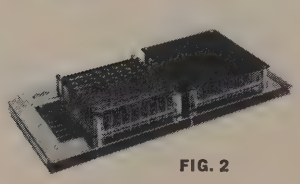

FIG. 2

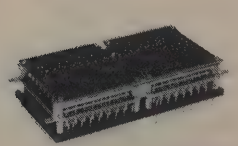

FIG. 3

C. P. Clare's type 969 Memory Matrix products offer X-Y coordinate switching in compact packages. The Memory Matrix consists of 64 crosspoint relays arranged in an eight column by eight row array. The features of cordwood style construction combined with automatic coil winding techniques provide the ultimate in low cost, high density hard contact switching.

Each crosspoint consists of either two or four Clare magnetic self-latching reed capsules whose contacts are sealed in an inert atmosphere. Once closed, these contacts require no external power to remain closed.

Crosspoint operation is performed easily: To set a crosspoint (close it's contacts), simultaneously pulse the desired X and Y coil circuits for one millisecond. Resetting this crosspoint (opening it's contacts) is achieved by pulsing either the X coil circuit alone or the Y coil circuit alone, again for only one millisecond.

1. **Cable Plug-In (figure 1)**
   Designed to be used with the popular flat cable interconnection technique. Available are 2 or 4 poles per crosspoint, in an 8x8 array.
2. **PCB Plug-In (figure 2)**
   Ready to plug into your prewired backplane, on 2.0 inch card mounting centers. Available in 2 poles per crosspoint, in either 8x8 or 8x16 arrays.
3. **Modular Matrix (figure 3)**
   Designed to be flow-soldered to your board assembly. Pins are on 0.100 inch grid centers. Available in 2 poles per crosspoint, in either 8x8 or 8x16 arrays.

# C. P. CLARE SOLID STATE RELAYS

## 203 SERIES MINIATURE ZERO CROSSING AC RELAYS

Clare's 203 series solid-state relays provide reliable AC power switching in a compact DIP package with pin mounting for standard PC boards. These models are all solid-state and feature opto-isolation and zero cross synchronous switching. In one of the smallest zero crossing packages available, they are capable of switching up to 1½ amps (2 amps with 100 LFM of moving air), 240Vac at a 0.35 power factor. Designed to be directly compatable with DTL/TTL logic, these units also feature 2,000Vrms isolation, 12½ amps peak one cycle surge rating, high dv/dt resistance and models that can withstand up to 600 volt transients.

UL RECOGNIZED
FILE NO. E61258

## 212 SERIES HEAVY DUTY AC RELAYS

Clare's 212 series AC solid-state relays have heavy duty switching capabilities with 10 or 25 amp rating at 140 or 250Vac. These units are pure solid-state with opto-isolation and zero crossing synchronous switching. The opto-isolation provides total input/output isolation and the sensitive input is fully compatible with DTL/TTL logic (control voltage of 3 to 28Vdc). The 212 series relays are recommended for heavy duty AC applications and are ideally suited for switching motor, process control and inductive loads. Every relay features both quick connect and screw type terminals. The 212 type relays are UL recognized under file E61258, as Electronic Motor Controllers.

UL RECOGNIZED
FILE NO. E61258

## 222 SERIES MODULAR AC RELAYS

Clare's modular 222 series AC solid-state relays have heavy duty switching capabilities with 5 or 10 amp ratings at 140 or 250Vac. These models are pure solid-state and feature opto-isolation with zero crossing synchronous switching. The opto-isolator provides total input/output isolation and the input is fully compatible with DTL/TTL logic (control voltage of 3 to 28Vdc. The 222 series one cycle surge is one thousand percent of rated current, and is ideally suited for heavy duty AC applications. Available is a choice of .032 pins, quick connect and screw terminals. The series is UL recognized under file E61877.

UL RECOGNIZED
FILE NO. E61877

222

## 223 SERIES MODULAR DC RELAY

Clare's 223 series modular DC solid-state relays have fast 100 microsecond switching capabilities with 2 or 5 amp ratings at 50Vdc. The opto-isolator provides total input/output isolation and the input is fully compatible with DTL/TTL logic (control voltage of 3 to 28Vdc). A choice of .032 pins, quick connect or screw terminals is available. The 223 series relays are ideally suited for motor and servo controllers in process control and machine tool applications.

223

## 233 SERIES DC/DIP RELAYS

Clare's miniature 233 solid-state DIP relays give you a choice of DC switching: 400 milliamps at 60Vdc or 100 milliamps at 250Vdc. These relays are pure solid-state and feature fast, 1 microsecond response time, compatibility with 5 volt digital logic, total input/output isolation, and a standard 14 pin dual in line package. The 233 is recommended for line drivers, data couplers, lamp, solenoid, and motor drivers.

233

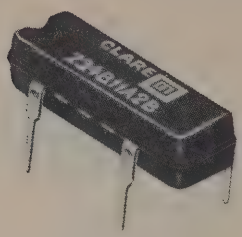
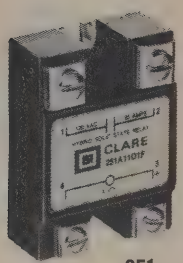
# C. P. CLARE SOLID STATE RELAYS



234

## 234 SERIES — AC/DC DIP RELAYS

Clare's miniature 234 series DIP relays are pure solid-state devices with a bipola output that switches both AC and DC loads. These devices feature fast microsecon response time, capability with 5 volt DTL/TTL digital logic, total input/output isola tion, low offset voltage, and is housed in a standard 14 pin dual in line package o molded epoxy. The 234 series is ideal for analog/transducer signal switching, lin and lamp drivers, data couplers, A/D converters, multiplexers, and scanners.

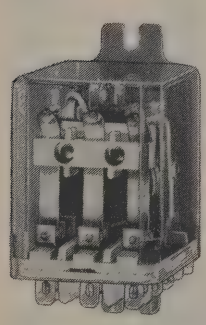


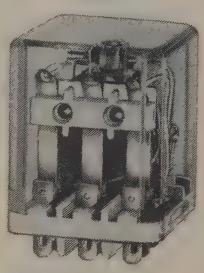
251

## 251 SERIES HYBRID INDUSTRY STANDARD AC RELAYS

Clare's 251 Hybrid solid-state relay utilizes a reed relay input and a solid-state (triac output. It is packaged in the industry standard outline case with additional improve ments; square terminal bosses stop wire clamp rotation, a slotted "U" mounting hol in the base simplifies panel mounting, high temperature thermoset plastic materia used for the case is not only flame retardant, but is also highly resistive to mos chemicals, a closed cell foam potting material reduces stress on internal component while sealing out humidity. The 251 series was designed to operate at 5Vdc DTL TTL inputs while having the capability of switching heavy duty AC loads (10 and 2 amps, 120 and 240Vac). A 200 amp peak one cycle surge rating (90 amp peak fo 10 amp models) and 4,000V peak isolation provide reliable motor, heater, coil, an lamp load switching. Heavy duty dv/dt filter components and a gas filled reed capsul insure a minimum life of 20 million operations (10 million for the 240Vac models).

# C. P. CLARE GENERAL PURPOSE RELAYS





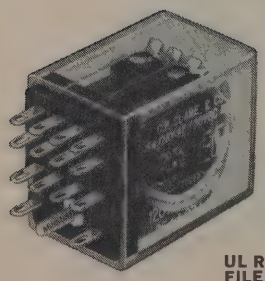
UL RECOGNIZED
FILE NO. E47012

## GP3 HEAVY DUTY RELAYS

The GP3 relays are UL recognized (UL File E47012) and CSA certified as Magnetic Motor Controllers. The rugged AC or DC relays are available in SPDT, DPDT and 3PDT configurations with Gold flashed Silver Cadmium Oxide contacts rated at 10 amperes at 30Vdc resistive or 120Vac, .8 power factor. The GP3 plain case models are available with matching molded nylon sockets for plug-in applications. The GP3 bracket case model is available for direct chassis mounting only. Mechanical life expectancy is 10 million operations, electrical life 100,000 operations minimum at rated load .187" quick connect terminals are standard.

The relays are 1.906" high, 1.531" wide and 1.406" deep.

(See Catalog GP3 for more information).



UL RECOGNIZED
FILE NO. E47012

## 352/354 MINIATURE 2- & 4-POLE RELAYS

The 352/354 relay handles motor, lamp and solenoid switching requirements in every thing from vending machines to disc drive applications. They also switch signal levels in intercoms, two-way radios and small telephone exchanges plus input multiplexing in control systems.

The options make it all possible. Contact ratings up to 10 amperes (2 pole) or 5 amperes (4 pole) AC or DC coils, plus solder lug/plug-in, taper tab quick-connect or PCB terminals. The relays have UL recognition, File E47012, as Magnetic Moto Controllers for use in industrial applications.

The 352/354 relays are .859" maximum wide and 1.109" maximum deep. The maximum height for mounting above a chassis is 1.290", above a PCB is 1.385" and above a chassis in a socket is 1.450".

(See Catalog 352/354 for more information).

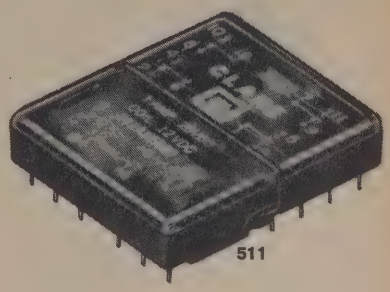
# C. P. CLARE TELEPHONE RELAYS

## 511 LOW PROFILE RELAYS

Clare's new 511A series Modern Telephone relays offer reliable low level to 1 ampere switching capabilities in 2 and 4 Form C or D models. The low profile package is only 0.35″ high and a more sensitive model, type 511B, has a height of 0.405″ maximum. Both models are 1.32″ maximum wide and allow PCB mounting and standard 0.5″ centers. The 2 pole models are 1.22″ deep and the 4 pole models are 1.52″ deep. Coil voltages of 6 to 48Vdc are available for both types.

The 511 series enclosures feature an amber polycarbonate dust cover and a molded base of thermosetting electrical grade plastic material. This box type base with molded-in terminal pins fully protects the inside of the relay during wave soldering and subsequent partial immersion cleaning operations.

(See Catalog 511 for more information).

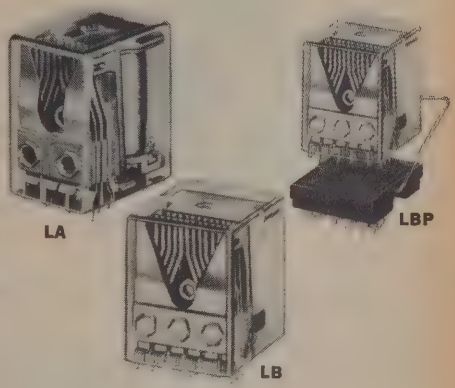


## LA, LB, LBP MINIATURE COVERED RELAYS

Designed for the user who must have high quality at a reasonable price. The LA relays have 4PDT contacts and the LB/LBP relays have 6PDT contacts. These miniature relays have extraordinary switching capacity and versatility for their size. Contacts rated 2 amps at 28Vdc. LA/LB series is for direct PCB mounting; and the LBP series is for direct plug into socket mounting. These relays are ideal components for industrial and telecommunications applications.

The relays are a maximum of 1.24″ high and 1.07″ deep. Maximum width of the LA is .75″ and the LB is 1.0″. Coil voltages of 6 to 60Vdc are available.

(See Catalog 501 for more information).



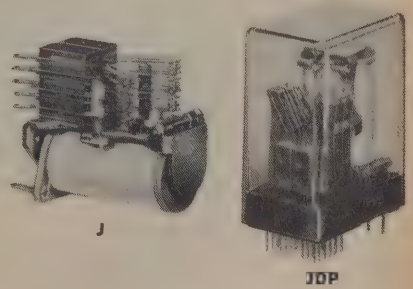
## J, JDP OPEN TYPE RELAYS

J & JDP relays are compact telephone type relays for applications ranging from simple switching in alarm circuits to complex computer functions. Contact combinations of 4, 6 and 8 pole double throw are rated 4A at 120Vac, 60Hz or 30Vdc resistive. Mechanical life exceeds 70 x $10^9$ operations.

Type J relays are open type construction for direct chassis mounting. Series JDP relays are furnished with a socket with solder lug terminals and a dust cover enclosure.

Type J relays are 1.88″ high and 1.12″ wide. The depth of the 4 and 8 pole models are 1.50″ and 1.94″ respectively.

Type JDP relays are 2.64″ high and 1.39″ wide. The depth of the 4 pole and 8 pole models are 1.72″ and 2.11″ respectively.



# C. P. CLARE MINIATURE/INDUSTRIAL CRYSTAL CAN RELAYS

## F, FW FULL SIZE AND HF, HFW HALF SIZE RELAYS

Clare provides full and half-size crystal can relays of unusual versatility, capable of reliable long life operation under adverse environments. The relays are available in both solder seal versions (F & HF) and welded seal models (FW & HFW). These relays are ideal for use in industrial application as well as military and aerospace. Relays employ a rigid frame to maintain permanent alignment of all elements. Contact arrangements are Form C. These relays are manufactured to meet MIL-R-5757 or MIL-R-39016, as applicable, with many part numbers on QPL for the specification.

(See Catalog F/FW and HF/HFW for more information).

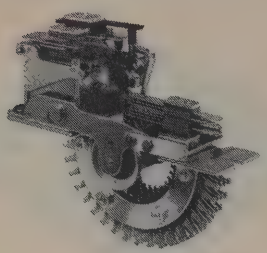
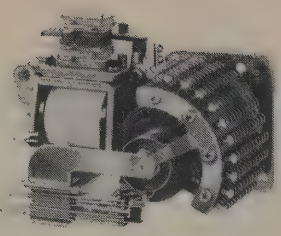
# C. P. CLARE STEPPING SWITCHES



TYPE 20



TYPE 210

## 20, 26, 210, 211 SERIES SEQUENTIAL SWITCHING

Clare stepping switches offer an economical alternative to solid state switching. Multiplexing, counting and sequencing problems are easily solved by providing the greatest working capacity in the smallest space. Clare stepping switches allow you to select interrupt or change connections in a succession of circuits in response to current pulses.

### TYPE 20/26

The Type 20 or 26 offer 1 to 16 levels of 20 or 26 points. They are also available in 1 to 12 levels of 40 or 52 points.

### TYPE 210/211

Type 210 or 211 offer 1 to 15 levels of 10 or 11 points. They are also available in 1 to 5 levels of 30 or 33 points.

Contacts are rated 0.1A at 115Vac or 30Vdc resistive with a 3A carry rating. Switch life (mechanical) is 50 to 28 million steps depending on type and number of levels.

Switches operate on DC pulses at ratings to 35 per second. Separate interrupter contacts are provided which operate on each coil pulse.

Off normal contacts can also be provided which operate only in "home" position.

All switches listed have 1 bridging level with the remaining levels being non-bridging. 2C off-normal and 2C interrupter contacts are standard.

# Relays

CDE CORNELL-DUBILIER

# A SUPER RELAY

## FROM

CDE

**The CDE Type 700 Series Relay represents a real break-through for Electronic Circuit Design Engineers who demand quality, compactness, and low cost.**

The 700 Series is ideally suited for a wide variety of uses because of its extremely small size, reliable contacts and low cost. Typical applications would include use in control circuits in audio systems, visual aid devices, automotive applications, medical electronics, business machines, communications equipment, remote control television and many others.

The 700 Series occupies a volume of approximately ½ cubic inch. With a base dimension of .67 inches by .97 inches and a height of .79 inches, it is ideally suited for high density packaging with a low profile on printed circuit board assemblies.

Standard contacts are a special gold alloy cross-bar design, for switching loads from low level through 3 amperes resistive at 28 VDC or 120 VAC. Other contact materials are available for special applications up to 5 amps.

Contact forms are available in 1A (SPST-NO), 1B (SPST-NC), and 1C (SPDT). The standard stock items have 1C contacts.

Stock relays are available having DC coils for nominal 6, 12 and 24 volt operation. Coils for other nominal voltages or currents are available on special order.

# MICRO-MINIATURE REED RELAYS
## Series CR-2200

**Coto's micro-miniature CR-2200 series reed relays offer the same versatility, dependability and switching capabilities as the larger "miniature" relays . . . yet in a package ⅓ smaller than a "DIP". A wide variety of contact types are available to meet most micro-miniature switching needs. Coto utilizes premium grade reed switches exclusively. The relays are encapsulated and thoroughly tested by the most modern and sophisticated techniques. Again, the finest quality . . . from Coto.**

- Relay occupies only .17 sq. in. of PC Board space . . . smaller than a DIP!
- Wide variety of contact types to meet most switching applications
- A choice of coil resistances at each voltage
- All relays are epoxy encapsulated in a magnetically shielded can, which has been coated with a bright, chemically resistant and insulating epoxy.
- Electrostatic shielding available
- Less than 500 microsecond switching speed typical on most models

# DIP REED RELAY

## Series CR-2600

Coto's DIP reed relay is designed for versatility and reliability. A wide variety of contact types and coil resistances are offered to meet most switching applications.

All relays are encapsulated in a magnetically shielded steel shell that has been coated with a bright chemically resistant and insulating epoxy. A semiflexible epoxy potting compound provides stress-free encapsulation and avoids the problems common to molded relays. All relay contacts are run-in and tested for dynamic contact resistance, which enhances the reliability of the relays for low-level switching.

This relay provides the advanced design, quality and versatility the industry has come to expect from Coto.

### OPTIONS AVAILABLE:

- Electrostatic Shielding
- Diode Coil Suppression
- Alternate Switch and Coil Connections

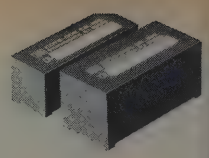
# LOW THERMAL EMF REED RELAYS

## Series CR-3200



Coto-Coil has developed a unique new method* that virtually eliminates offsets caused by thermal emf's in almost any type of reed switch. This design now allows the entire spectrum of reed relays to be used for very low signal switching. These new COTO relays are especially designed for scanning low-level analog and digital signals, multiplexing, data acquisition, and automatic testing of components and systems. They offer all the advantages of an encapsulated reed relay, such as high isolation, speed and long lifetime under practically any environmental conditions, in addition to a very low and stable offset.

*Patented

COTO's new line of low-offset relays is offered with a large variety of contact combinations, switch types and thermal offset ratings, in order to meet each customer's requirement with maximum performance at a minimum cost. The relays are encapsulated in an epoxy-filled shell, and the offsets that are present are remarkably independent of ambient temperature and external environment.

Package I : 1.375 x .500(A) x .500(B)

Package II : 1.375 x .600(A) x .650(B)

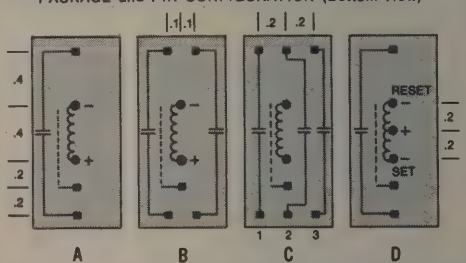
Shield and switch pins are .025" square, tinned copper.

Coil pins are .036" dia., nickel copper.

Pin pattern is centered within the case by ±.010".

Relays are encapsulated in a phenolic case, epoxy-filled.

PACKAGE and PIN CONFIGURATION (Bottom View)



Relays 3204, 3205, 3206, 3223 and 3233 contain a bias magnet, and coil polarity shown above must be observed.

Mercury-wetted Relays 3231, 3232 and 3233 must be mounted vertically with the arrow pointing up and shield pin at the bottom.

Switches 2 and 3 in Diagram C are the low-thermal switches in Relay 3250.

*Thermal Offset Ratings Per Switch:

| | |
|---|---|
| 4 <200nV | 8 <3μV |
| 5 <500nV | 9 <5μV |
| 7 <1μV | 0 <100μV |

Thermal offset measurements are made across each switch, except in Relays 3202, 3205, 3250, 3222 and 3232 where measurements are made differentially between the two low-thermal switches.

NOTES:
1) All relays are magnetically shielded.
2) Unless otherwise specified, all relays are electrostatically shielded.
3) Isolation resistance of $10^{10}$ or $10^{12}$ ohms is available.

| CONTACTS· | DRY | HIGH VOLTAGE | MERCURY WET |
|---|---|---|---|
| Max. Power (Volt-Amps) | 10 | 10 | 28 |
| Max. Voltage (DC or Peak AC) | 200 | 1000 | 100 |
| Max. Current (Amps) | .500 | .500* | 1.0 |
| Initial Contact Resis. (Ohms) | .300 | .300 | .300 |
| Min. Breakdown Voltage (DC or Peak AC) | 300 | 1000 | 800 |
| Isolation Resis. (Ohms) | $10^{10}$ | $10^{10}$ | $10^{10}$ |
| Operate Time (Typ. —msec) | 1.5 | 1.5 | 2.0 |
| Release Time (Typ. —msec) | .2 | .2 | .5 |
| Average Life at Full Rating (# operations) | 50x$10^6$ | 50x$10^6$ | 100x$10^6$ |

*0.010 Amperes max. @ 1000 VDC

**INSULATION RESISTANCE**
$10^{10}$ ohms minimum at 100VDC, +25°C, 50% relative humidity between all isolated pins. $10^{12}$ ohms is also available.

**CAPACITANCE**
The contact-to-contact capacitance for low thermal contacts is approximately 2.0pf. This value is composed of 0.2pf from the reed contacts and 1.8pf from the low thermal offset circuitry. With the electrostatic shield the contact-to-coil capacitance is typically 2.0pf.

**MUST OPERATE and RELEASE VOLTAGES**
Must-operate voltages at 25°C:
5v relay — 3.8; 6v relay — 4.5; 12v relay — 9.0
Must-release voltages at 25°C:
5v relay — 0.4; 6v relay — 0.5; 12v relay — 1.0

**INITIAL CONTACT RESISTANCE**
The maximum initial contact resistance for each contact is 0.3 ohms. Typically the initial contact resistance measures to be 0.250 ohms and is composed of 0.070 ohms from the reed contacts and 0.180 ohms from the low thermal offset circuitry.

**TESTING and RELIABILITY**
The low thermal emf reed relays are most commonly used under essentially dry circuit conditions. For these low-level loads the life of a clean contamination-free switch can exceed 500 million operations. In order to assure the highest possible reliability each switch and completed relay is subjected to an extensive series of cycling and dynamic testing. In addition each isolated pin is checked against every other pin for insulation resistance at the rated breakdown voltage. Finally a thermal offset test at the rated voltage is performed.

**THERMAL TESTING.** Care must be exercised in setting up in-house testing procedures for measuring thermal offsets of the CR-3200 relays. Without properly designed test circuitry and instrumentation, far greater thermal EMF offsets can be generated external to the relay than internally. Coto's engineering department will be pleased to assist in recommending testing circuitry and components for Q/C testing.

**EFFECT OF AMBIENT TEMPERATURES.** One of the specific design features of the CR-3200 low thermal relay is its exceptional stability with ambient temperature changes. For the purpose of rating, all standard CR-3200 relays are tested at a nominal 25°C ambient. However, temperature excursions from 0°C to 50°C will result in no more than a 500 nanovolt offset change in a 1μV rated relay.

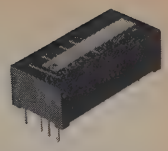
# LOW THERMAL EMF REED RELAYS FOR LOW-LEVEL DATA ACQUISITION SYSTEMS

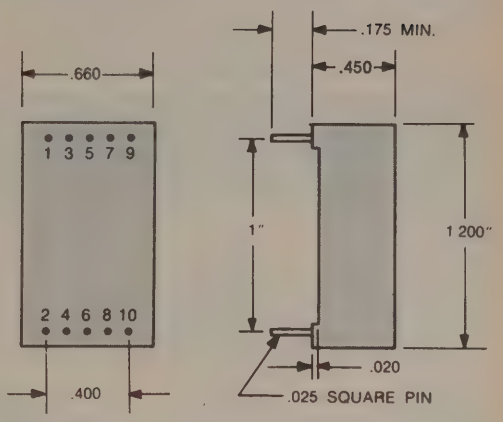


## SERIES CR-3300

After many years as the leading supplier of ultra-low thermal EMF relays for low-level data acquisition systems, Coto has now developed a new generation of low thermal EMF reed relays. The CR-3300 series relays utilize a new simpler design that reduces the cost, while increasing the performance and reliability of the relays.

The CR-3300 relays are designed especially as input devices for data acquisition systems. These systems, along with process controllers and monitors, datascanners, multiplexers and digital and analog multipoint recorders, often require as many as 1000 input relays in one system which must switch signals to 1 microvolt resolution in an industrial environment. These applications require ultra-high reliability, low and stable thermal offset voltage, superior packaging and high control/signal circuit isolation. The CR-3300 relays are designed to meet these requirements and more, at a reasonable cost.

| CONTACT FORM | Model Number | Nominal Coil VDC | Coil Res. Ohms ±10% | Must Operate VDC | Must Release VDC | Pin. Dia. Bottom View |
|---|---|---|---|---|---|---|
| 2A | CR-3302-5 | 5 | 350 | 3.8 | 0.4 |  |
| | CR-3302-12 | 12 | 2000 | 9.0 | 1.0 | |
| 3A | CR-3350-5 | 5 | 350 | 3.8 | 0.4 |  |
| | CR-3350-12 | 12 | 2000 | 9.0 | 1.0 | |
| 3A | CR-3360-5 | 5 | 350 | 3.8 | 0.4 |  |
| | CR-3360-12 | 12 | 2000 | 9.0 | 1.0 | |



Pin 9 is the electrostatic shield pin.
NOTE: For Model CR-3360 the 3rd non-low thermal switch (9-10) is connected in common with the electrostatic shield at Pin 9.

Switches connected to pins 5-6 and 7-8 are the low thermal EMF switches.

### PACKAGING

Relays are epoxy encapsulated in a flame-retardant polyester case (SE-O rated). The reed switches are coated with a silicone rubber to provide a stress-free encapsulation.
Tinned electrolytic copper pins minimize thermal EMF junctions at the PC Board connections.
The coil and coil terminations are well isolated from the switches and shield which provide a minimum of 1500 VRMS isolation between control and signal circuits.
All relays are magnetically shielded.
Unused terminals are omitted.

| PARAMETER | | TEST CONDITIONS | VALUE |
|---|---|---|---|
| Max. Switch Voltage | | DC/Peak AC | 150 Volts |
| Max. Switch Current | | DC/Peak AC Resistive | 500 mA |
| Max. Carry Current | | | 2.0 Amps |
| Max. Contact Rating | | DC Resistive | 10 Watts |
| Life Expectancy | | At Signal Level | 100 x $10^6$ Cyc. |
| | | At Rated Load | 10 x $10^6$ Cyc. |
| Static Contact Resistance (Initial) | | 0.050 Volt, 10 mA Contact Load | 0.100 Ohms Max. |
| Dynamic Contact Resistance (Initial) | | 0.5 Volt, 50 mA Load 100 hz, 1.5 msec after coil energized | 0.200 Ohms Max. |
| Insulation Resistance | | Between all isolated pins @ 100 V, 25 deg. C, 40% relative humidity. | $10^{10}$ ohms min. ($10^{12}$ ohms avail.) |
| Open Contact Capacitance | | Shield Floating | 1.0 pf Typ. |
| | | Shield as Guard | 0.4 pf Typ. |
| Contact to Shield Capacitance | | Contacts Open | 1.5 pf Typ. |
| | | Shield & Coil shorted together | 1.5 pf Typ. |
| Dielectric Strength (Minimum) | Between Contacts | DC/Peak AC Static Conditions | 250 Volts |
| | Contacts to Shield | | 500 Volts |
| | Contacts and Shield to Coil | AC VRMS | 1500 Volts |
| Operating Time (Including Bounce) | | At Nominal Voltage 30 hz Sq. wave | 1.0 msec Typ. |
| Release Time | | Zener Diode Clamp Coil Suppression | 100 μsec Typ. |

### THERMAL EMF

**RATINGS.** The thermal EMF is specified differentially between the two low thermal EMF switches (pins 5-6 and 7-8). This measurement is made by shorting pins 5 and 7 with a copper shunt and connecting a microvolt meter across pins 6 and 8.
The CR-3300 relays are available with maximum differential thermal EMF ratings of either 10 μV, 5 μV, 3 μV or 1 μV. The ratings are determined by 100% testing and sorting according to the thermal EMF's measured after the coil has been energized for 15 minutes at its nominal voltage.

**EFFECT OF AMBIENT TEMPERATURE.** CR-3300 relays are exceptionally stable with ambient temperature changes. For the purpose of rating, the thermal EMF is measured at a nominal 25 degrees C ambient. Slow temperature excursions from 0 degrees C to 50 degrees C should result in no more than a 1 μV thermal EMF variation. External heat sources which create thermal gradients in the relay may cause larger variations and should be avoided.

**COIL POWER AND DUTY CYCLE.** The thermal EMF of the CR-3300 relays is directly proportional to coil power or the square of the applied voltage. When the relays are operated in a scanning mode the thermal EMF will be proportional to the coil duty cycle. Thus a 5 μV relay operated at a 10% duty cycle will normally exhibit less than a 1 μV offset.

**TESTING.** Care must be exercised in testing the thermal EMF of the CR-3300 relays. Large errors in the thermal EMF readings may be introduced by an improperly designed test set up. The connections to the copper switch pins should be made with 4 identical low mass connectors and lead wires. Care should be taken to avoid all external thermal gradients. Pure copper wire and connections should be used throughout. Coto's engineering department will be pleased to assist in recommending thermal EMF test procedures.

### ENVIRONMENTAL RATINGS

Storage Temperature: —50 to +100°C
Operating Temperature: —20 to +70°C
NOTE: (The must operate and must release voltages and the coil resistance are specified at 25 degrees C. These values vary by approximately 0.4%/degrees C as the ambient temperature varies).
Vibration: 20 g's to 2000 hz
Shock: 50 g's

### TESTING AND RELIABILITY

All relays utilize premium quality, contamination free reed switches with rhodium contacts. In order to assure the highest possible reliability each switch and completed relay is subjected to an extensive series of cycling and dynamic testing. In addition each isolated pin is checked against every other pin for insulation resistance at the rated breakdown voltage. Finally a thermal EMF test at the rated voltage is performed.

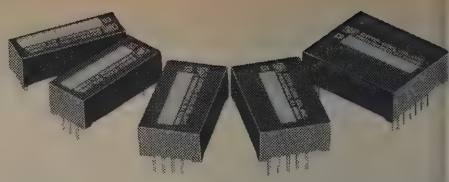
# MINIATURE REED RELAYS

## Series CR-2000 • • 1″ x .100″ Grid



**DESCRIPTION** Coto-Coil's Series CR-2000 is a new family of relays which have a pin termination on the popular 1″ x .100″ grid pattern. They are economical and available with a large variety of options (see reverse side).

The CR-2000 can be completely epoxy-encapsulated in a phenolic shell for maximum environmental protection and high insulation resistance. They are also available in a covered but non-encapsulated form for maximum economy.

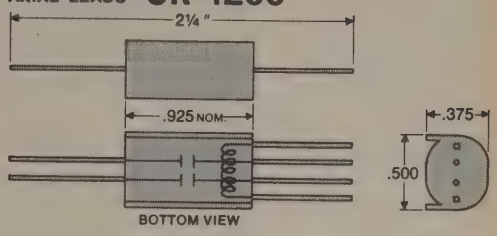
| 1C Standard | CR-4011-5, 6, 12, 24 | .150 | 3 | 28 | .250 | 250 |
| 1A* Mercury Wet | CR-4020-5, 6, 12, 24 | .050 | 28 | 100 | 1.0 | 1000 |
| 1A High Voltage Low Cost | CR-4030-5, 6, 12, 24 | .150 | 10 | 240 VAC | .5 | 600 |
| 1A High Voltage Standard | CR-4031-5, 6, 12, 24 | .150 | 10 | 500 | .5 | 1000 |

*Standard coil only. Mount Hg Wet relay vertically with coil leads down.

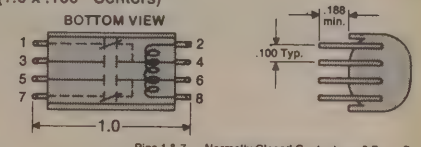
Specifications subject to change without notice.

## CR-4200

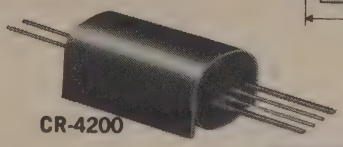
AXIAL LEADS



LEADS BENT and CUT (1.0 x .100" Centers)



Pins 1 & 7 — Normally Closed Contacts on 2 Form C
Pin 1 — Optional Electrostatic Shield Terminal on Form A and Form B Relays
Pin 2 — Positive Coil Terminal to Actuate 1 Form B or to Set Latch Relay
Pins 3 & 4 — 1 Form B or Latch Contact Terminals



| OPERATING PARAMETERS @ 25°C | | | | |
|---|---|---|---|---|
| Nominal Volts | 5 | 6 | 12 | 24 |
| Must Operate Volts | 3.7 | 4.5 | 9.0 | 18.0 |
| Must Release Volts | 0.4 | 0.5 | 1.0 | 2.0 |
| Standard Coil Resistance Ohms | 60 | 100 | 400 | 1600 |
| High Sensitivity Coil Resistance Ohms | 150 | 250 | 1000 | 4000 |

**CR-4200**

Insulation Resistance 10⁹ Ohms min @ 100VDC, 25°C, 40% Rel. Humidity

| Relay Contact Type | Model Number and Coil Voltage | Initial Contact Resist. Ohms Max. | Contact Rating Watts Max. | Switch Volts DC Max. | Switch Amps Max. Resist. | Break-down Volts DC Min. |

| 2A High Voltage Standard | CR-4231-5, 6, 12, 24 | .150 | 10 | 1000 | .5 | 1200 |
| 1B Standard | CR-4240-5 6, 12, 24 | .150 | 10 | 200 | .5 | 300 |
| 1A Latch Single Coil | CR-4245-5, 6, 12, 24 | .200 | 10 | 200 | .5 | 300 |

1. Available with 1000 ohm coil only.
2. External series limiting resistance recommended: 5 or 6V — None 12V — 1000 ohms 24V — 3000 ohms
3. Coil polarity must be reversed to set and reset latch.
4. External coil suppression recommended for proper latch operation.

**ORDERING INFORMATION**

CR — 4XXX — XX — XXXX

- MODEL No.
- COIL VOLTAGE
- "0" — standard coil; "1" — high sen. coil
- "0" — no magnetic shield; "1" — magnetic shield
- "0" — axial leads; "1" — bent and cut leads
- "0" — no electro-static shield; "1" — electro-static shield

If all options are "0" omit last four digits.

Dimensions subject to change without notice.

The above listing of magnetic reed switches does not constitute a complete listing of all switches commercially available to fit Coto Coil reed relay coils. It does indicate the most common types and sizes manufactured by various companies. Coto's sales department will be pleased to assist you in recommending a source for your switch requirements or supplying the complete relay for your application.

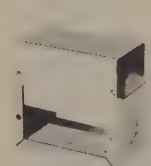
# DELTROL CONTROLS RELAYS

L = 1-7/8
W = 1-1/2
H = 1-9/32

### 100U/101U SERIES

Small general purpose relay for light power load applications such as other relays, solenoids and small motors. Continuous duty operation. 5 amp contacts: 1/8" dia. 10 amp contacts: 3/16" dia. Contact material: Gold-flashed fine silver and silver-cadmium oxide is standard. Mounting: No. 6-32 stud and locating tab. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066). CSA listed (File No. 20690).



L = 4
W = 2-1/4
H = 2-1/4

### B-4 DUST COVER

Sealed knock-out holes for standard conduit fittings. Relay mounts on pre-drilled base. Constructed of Aluminum. Snap action cover release. Accommodates following relay series 100, 100D/100F, 100RF, 100T, 100U/101U, 110, 120 and 130.

**(S/N 20256-80) List $2.65**

**105 SERIES** General purpose plug-in relay for continuous duty operation. Eight and 11-pin plugs for up to 3PDT configuration. Contact material: Gold-flashed fine silver and silver-cadmium oxide is standard. Add $ .40 to list for 105G neoprene gasket version. Plastic Cover. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066).

### 170 SERIES

Medium duty relays for industrial control applications. Molded nylon encapsulated coil is resistant to fungus and moisture. Ratings: (SPST-NO-DM): 25 amp, 1 hp, 120 VAC; Contacts: Silver cadmium oxide, gold flashed. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066).

| Stock No. | Series | Contact Poles | Rating in Amps | Coil Voltage/ Current | Resistance (Ohms) | Nominal Coil Power | List Price |

### 250 SERIES

Miniature general purpose cradle relay. DPDT or 4PDT configuration rated 3 amps @ 28VDC/120VAC. Signal input as low as 10 mW. Contact Resistance: 50 milliohms maximum. Terminals: printed circuit pins or solder type. Coil Treatment: tape wrapped. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066).

### 900 SERIES

Heavy duty power relay for industrial control applications. Particularly suited for motor controls, heater loads, welder loads, and other power switching applications. Molded nylon coil resists fungus and moisture, has a cleaner appearance. Long life, rugged construction. Rating: 25 amps, 1-½ hp, 120/240 VAC. Contacts: 5/16" dia. silver cadmium oxide, gold-flashed. Heavy duty screw-type terminals. Mounting: two 3/16" holes on 1-7/8" centers. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066). CSA listed (File No. 20690).

L = 5
W = 4
H = 3

### B-5 DUST COVER

Sealed knock-out holes for standard conduit fittings. Relay mounts on pre-drilled base. Constructed of Aluminum. Snap action cover release. Accommodates relay series 900.

## C-6 PULL TYPE

Low cost, low power solenoid for applications such as appliances, vending machines, and automobiles. Molded nylon coil for fungus and moisture resistance. Terminals molded into the coil for extra strength, virtually eliminating open coils. Available with optional buzz trimmer that eliminates AC hum.

NOTE: Standard intermittent duty cycle is one (1) minute on and three (3) minutes off.

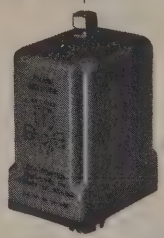
Manufacturers of Solid State Protective Devices for Instrumentation and Control of Electrical Equipment

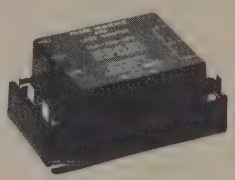
## PHASE MONITOR / RELAYS

### PHASE LOSS, PHASE SEQUENCE & UNDER VOLTAGE

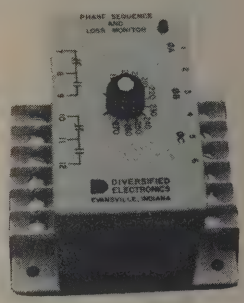
SLA SERIES
Used for protection and control of electrical equipment due to adverse conditions such as Phase Loss (Single Phasing), phase reversal (CBA sequence) and under voltage (brown outs). Relay is energized, and an indicator light glows when a "no fault" condition exists. This is a "fail safe" mode of operation, Four field adjustable model cover standard voltages up to 757 VAC. Factory stock on standard items. Relay contacts capable of switching 24 to 600 VAC control circuits.



STYLE A



STYLE N



STYLE E

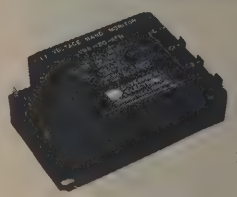
### PHASE UNBALANCE, PHASE SEQUENCE & PHASE LOSS

SLB SERIES
For applications where critical protection is required, the phase unbalance monitor will maintain a condition between all phases, required for satisfactory operation of electrical equipment. The field adjustable trip point operates over a range from 2 to 15% voltage unbalance. An adjustable time delay is incorporated to prevent nuisance tripping. This device also detects phase loss and phase reversal. Any fault condition must last longer than the pre set drop-out time for the relay to de-energize.

## VOLTAGE MONITOR / RELAYS

### UNDER VOLTAGE

UOA SERIES
Offers protection to single phase equipment which is required to operate above a pre selected safe voltage limit. When the voltage falls below the trip point for longer than the drop-out time, the relay drops out. The voltage must rise through a dead band (Hysteresis) before the relay will energize. The fixed time dealy is incorporated to accommodate start up transients and prevent nuisance tripping. Available in various enclosure style for either AC or DC operation.



STYLE N

### VOLTAGE BAND (sinlge & three phase)

VBA SERIES
Are single phase Voltage Band Monitors designed to detect when the monitored voltage goes above or below the pre selected limits. With the trip points being adjustable over wide ranges,very tight voltage tolerances can be obtained. The design incorporates a fixed time delay on drop-out to accommodate start up transients and prevent nuisance tripping. With normal operating voltage applied, the internal relay is energized. Then the voltage goes above or below the preset limits for longer than the drop-out time, the relay de-energizes. Available in various enclosure styles for either AC or DC operation.

STYLE A

PBA SERIES
Offers protection to Three Phase equipment which is required to operate between two voltage limits. The voltage is monitored for a pre selected under and over voltage limit on all phases. The design incorporates a fixed delay on drop-out accommodate start up transients and prevent nuisance tripping due to line fluxuations. With normal operating voltage supplied, the internal relay is energized. When any one of the three (3) phases goes above or below the pre selected limit for longer than the drop-out delay, the internal relay drops out. Field adjustable limits on both over and under voltage allows tight tolerances for critical applications. Available in style "M" enclosure only.

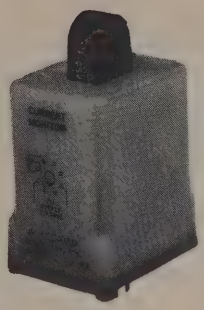
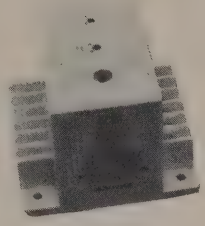
# AC CURRENT MONITOR / RELAYS

STYLE A





STYLE E

CMO SERIES
Over current protection adjustable time delay on pick-up, automatic reset, typically used in motor over current protective applications.

CMU SERIES
Under current protection, adjustable time delay on drop-out, automatic reset, typically used to detect when current goes under some pre-set trip point.

CML SERIES
Over current protective identical to the CMO SERIES except this device has manual lock-out feature. Once tripped, an operator must manually reset the current monitor.

CMB SERIES
Enexpensively designed merely to show a presence or absence of current. Can be used in either the under of over current mode.

CMI SERIES
Over current protection to motor equipment, features adjustable delay on pick-up for by passing inrush currents, adjustable range up to 20 amps AC. Available in style E enclosure only. The unique feature is, the relay will not trip during times of high inrush current. After the initial delay has elasped, the internal relay will drop-out immediately when the current rises above the pre-selected trip point. Typically used for applications such as conveyor jam-up protection. The device must be manually reset after a fault condition has been detected before the system will again become operative.

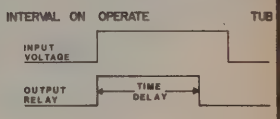
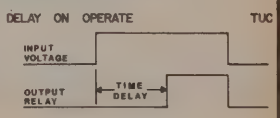
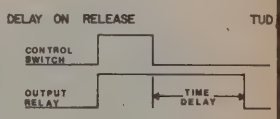
**TIMING ACTION**



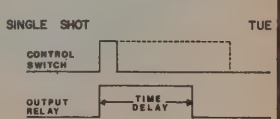
The TUB Series are INTERVAL ON OPERATE timers. Contacts of the internal relay close for an interval of time after input voltage has been applied. If input voltage is removed before the timer has timed out, the relay will de-energize and the time delay will reset.



The TUC Series are DELAY ON OPERATE timers that will not false transfer when power is removed before completion of the timing cycle. When input voltage is applied,the delay period begins. On completion of the time delay period, the internal relay contact close. When voltage is removed, the relay returns to normal. A fast recycle allows accurate high speed continuous operations. Delay on operate timers are used where it is required to delay the start on an event.



The TUD Series are DELAY ON RELEASE TIMERS. Voltage is applied to the input at all times. Upon closure on the control switch the internal relay energizes and the contact immediately transfer. The relay remains energized if no further action is taken. Immediately upon opening the switch, the time delay period begins. If the switch is not reclosed before the end of the delay period, the relay will de-energize. Closure of the switch before time out will reset the timer. Time delay on release is used where it is necessary to delay the end of an event for a period of time.



The TUE Series are SINGLE SHOT TIMERS. Voltage is applied to the input at all times. Upon closure of the control switch (momentarily or maintained), the internal relay energizes. At the end of the delay period, the relay will de-energize. Single shot timers remove any dependence of an operator from the process during the timing period. After closure of the control switch, timing continues until completion, regardless of the control switch position.

**Standard Voltages:**
AC: 120, 24 and 12. 240 (B-20 only).
DC: 48, 24, 12 and 6. 115 (B-20 only).
Voltages available from distributor stock are indicated in screened area of chart.
Other voltages available on request.

**AC Frequency**
60 Hz standard.
50 Hz available on request.

**Coil Temperature:**
These solenoids are designed to give approximately 65°C temperature rise when operated at recommended duty cycle and voltage.

**Duty Cycle:**
Continuous: at 40°C ambient temperature.
Intermittent: 20% on time, 80% off time. On time not to exceed 3 min. at 40°C ambient temperature.

**Coil Insulation:**
Class "A": 105°C max. temperature, standard.
Class "B": 130°C max. temperature available on request.

**Materials and Finish:**
Coil: Polyester tape varnished.
Bobbin: Phenolic
Frame: C.R. steel zinc dichromate plating.
Plunger: C.R. steel zinc chromate plating.
Biasing Spring: Stainless steel.

**Plunger Linkage:**
Link type construction Type "C" standard. Request drawing.
One piece machined construction Type "A" available (B-18).
Type "A" standard (B-19).
Type "B" standard (B-20).
Link Type "C" available (B-19-20).

**Biasing Spring:**
Wire type spring per drawing, standard.

**Coil Termination:**
6″ leads Type #3, standard. Solder lugs Type #1 (B-20 only). Other terminations available.

**Average Total Weight:**
1.2 oz. (B-18); 1.6 oz. (B-19); 2.3 oz. (B-20).

NOTE: DC solenoids do not have the magnetic disc shown in the drawing.

# BOX FRAME SOLENOIDS B-21/B-22/B-24

## GENERAL SPECIFICATIONS

**Standard Voltages:**
AC: 240, 120, 24 and 12.
DC: 115, 48, 24, 12 and 6.
Voltages available from distributor stock are indicated in screened area of chart.
Other voltages available on request.

**AC Frequency:**
60 Hz standard.
50 Hz available on request.

**Coil Temperature:**
These solenoids are designed to give approximately 65°C temperature rise when operated at recommended duty cycle and voltage.

**Duty Cycle:**
Continuous: at 40°C ambient temperature.
Intermittent: 20% on time, 80% off time. On time not to exceed 3 min. at 40°C ambient temperature.

**Coil Insulation:**
Class "A": 105°C max. temperature, standard.
Class "B": 130°C max. temperature available on request (except for B-24).

**Materials and Finish:**
Coil: Polyester tape varnished.
Cotton tape varnished (B-22/B-24).
Bobbin: Phenolic.
Nylon with brass tube (B-24).
Frame: C.R. steel zinc dichromate plating.
Plunger: C.R. steel zinc chromate plating.
Biasing Spring: Stainless steel.

**Biasing Spring:**
Wire type spring per drawing, standard.

**Coil Termination:**
Solder lugs, Type #1 per drawing, standard.
Other terminations available.

**Plunger Linkage:**
Request drawing.
One piece machined construction Type "B" standard.
Link Type "C" available.

**Average Total Weight:**
5.4 oz. (B-21); 7.9 oz. (B-22); 8.1 oz. (8-24).

# SOLENOIDS

## PULL-TYPE TUBULAR SOLENOIDS P-2/P-4/P-6/P-8

**(PATENTS: NOS. 3,303,445 AND 3,400,351)**

### GENERAL SPECIFICATIONS

**Standard Voltages:**
DC: 12 and 24.
All voltages available from distributor.
Other DC voltages available on request.

**Coil Temperature:**
These solenoids are designed to give approximately 65°C temperature rise when operated at recommended duty cycle and voltage.

**Duty Cycles:**
Continuous: at 40°C ambient temperature.:
Intermittent: 20% on time, 80% off time. On time not to exceed 3 min. at 40°C ambient temperature.
Pulse: 10% duty cycle. 90% off time. On time not to exceed 1 sec. at 40°C ambient temperature.

**Coil Insulation:**
Class "A": 105°C max. temperature standard.
Class "F": 155°C max. temperature available on request.

**Material and Finish (Metal Parts):**
Metal Parts: Steel zinc chromate plating.
Plunger: Steel with special corrosion resistant low friction coating.
Plunger Cavity: Stainless steel.
Lock Washer: Spring steel zinc plated.
Plunger Stop Stainless steel; brass (P-8).
Push Pin: Stainless steel.
Plunger Return Spring: Stainless steel.
Plunger Retaining Cap: High temperature plastic.
Plastic Cap Retaining Spring: Music wire zinc plated.

**Materials (Coil):**
Coil Insulation: Polyester.
Leads: #28 GA. P.V.C.
Lead Seal: Epoxy.

**Coil Termination:**
6″ leads standard.
Solder lug termination available.

**Average Total Weight:**
1.0 oz. (P-2); 3.0 oz. (P-4); 6.4 oz. (P-6); 1.1 oz. (P-8).

NOTE: Solenoids include mounting hardware.

## LAMINATED AC SOLENOIDS 1000 (½" STACK) / 1000 (¾" STACK)

### GENERAL SPECIFICATIONS

**Standard Voltages:**
AC: 240, 120, 48 and 24.
Voltages available from distributor stock are indicated in screened area of chart.
Other AC voltages available on request.

**AC Frequency:**
60 Hz standard / 50 Hz available on request.

**Coil Temperature:**
These solenoids are designed to give approximately 65°C temperature rise when operated at recommended duty cycle and voltage.

**Duty Cycle:**
Continuous: at 40°C ambient temperature.
Intermittent: 20% on time, 80% off time. On ime not to exceed 3 min. at 40°C ambient temperature.

**Coil Insulation:**
Class "A": 105°C max. temperature standard.
Class "B": 130°C max. temperature, glass tape wound coil available on request.

**Materials and Finish:**
Coil: Polyester encapsulated (1000 - ½"). Cotton tape varnished (1000 - ¾").
Bobbin: Phenolic.
Frame: Laminated steel zinc dichromate plated.
Plunger: Laminated steel zinc dichromate plated.
Anti-Residual Spring: Stainless steel.
Plunger Stop Spring: Spring steel.
Plunger Guides: Brass.

**Coil Termination:**
Solder lugs Type #1 per drawing standard. Other termination available.

**Plunger Linkage:**
Straight, reinforced and link type available.

**Average Total Weight:**
6.5 oz. (1000 - ½"); 9.2 oz. (1000 - ¾").

## SOLENOIDS

# "C" FRAME SOLENOIDS C-8 / C-9 / C-15

### GENERAL SPECIFICATIONS

**Standard Voltages:**
AC: 240, 120, 24 and 12.
DC: 115, 48, 24, 12 and 6.
Voltages available from distributor stock are indicated in screened area of chart.
Other voltages available on request.

**AC Frequency:**
60 Hz standard.
50 Hz available on request.

**Coil Temperature:**
These solenoids are designed to give approximately 65°C temperature rise when operated at recommended duty cycle and voltage.

**Duty Cycle:**
Continuous: at 40°C ambient temperature.
Intermittent: 20% on time, 80% off time. On time not to exceed 3 min. at 40°C ambient temperature.

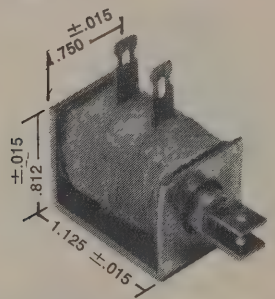
**Coil Insulation:**
Class "A": 105°C max. temperature.

**Materials and Finish:**
Coil: Polyester tape varnished (C-8); cotton tape varnished (C-9/C-15).
Bobbin: Nylon.
Frame: C.R. steel zinc dichromate plating.
Plunger: C.R. steel zinc chromate plating.

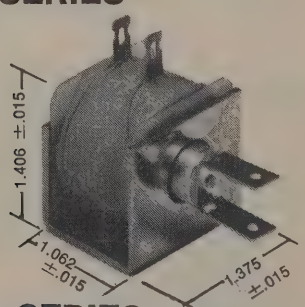
**Biasing Spring:**
Wire type spring available.

**Coil Termination:**
Solder lugs Type #14 per drawing, standard.
Other terminations available.

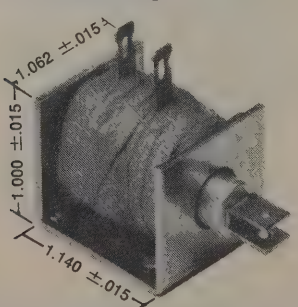
## C-8 SERIES



## C-9 SERIES



## C-15 SERIES



**Plunger Linkage:**
Link type construction; Type "A" standard (C-8/C-15); Type "B" standard (C-9).
One piece machined construction Type "C" available (C-8); Type "D" and Link Type "A" available (C-9); Type "E" available (C-15).

**Residual Spring:**
Leaf type spring available. See page ??. Must be used with link plunger, Type "A".

**Average Total Weight**
1.7 oz. (C-8); 4.7 oz. (C-9); 2.7 oz. (C-15).

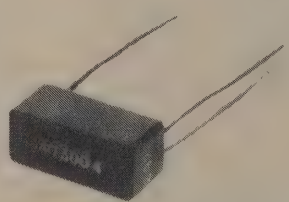
## SPECIAL DESIGNS

### HIGH INSULATION RESISTANCE RELAYS

Two typical designs are shown above:
**A** — A miniature reed relay with a floating lead to maintain high IR.
**B** — This is a relay using Form A and Form B switches timed to provide a Form C (break before make) function with flying leads to maintain $10^{13}$ ohms. Up to 5 Form A contacts are available @ $10^{13}$ ohms.

### PROXIMITY SWITCHES
**FORM B**

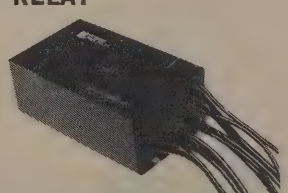
This is a Form B switch and magnet assembly, .7" L x .150" Sq. The normally closed switch opens, when approached by an ⅛" Sq. steel rod.



Epoxy molded switch and magnet assemblies are available in many sizes, contact ratings and terminal arrangements.

### SPECIAL HIGH VOLTAGE RELAY

This relay has three separate coils, each containing a 5,000VDC and a 10,000VDC switch. The package is molded with a flame retardant epoxy and constructed to withstand 15,000VDC between the switches and all other conductors. The relay is 3⅞" L x 2⅜" W x 1½" H.

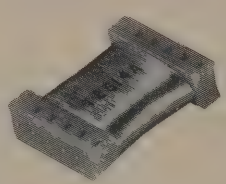


## SPECIAL DESIGNS

Douglas Randall makes custom designed relays to solve difficult problems. A few models are shown below to illustrate the variety of variations available. Special molding techniques make it possible to manufacture unusual sizes, shapes and terminal arrangements with low tooling costs.

The electrical variations possible with Reed Relays are practically limitless.
Douglas Randall will gladly review your applications and offer rapid engineering and prototype service.

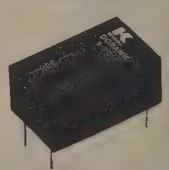
### SNAP-IN RELAYS



This 4 pole relay mounts in Berg-clips, like the Series SI on page 3466. Douglas Randall can now duplicate the following discontinued IBM models:
1 — Position: 766040, 766042, 766059, 766060, 766065, 766068 and 766086
2 — Position: 766043, 766044, 766057, 766067, 766072 and 766087
4 — Position: 766046, 766047, 766066, 766071 and 766079

### HIGH SENSITIVITY RELAYS

The relays shown will operate at 10 MW coil power.



### PLUG-IN RELAYS

Reed relays are easily adapted to standard style headers for socket mounting.

### SPECIAL TERMINALS AND MOUNTING SCREWS

The relay shown has terminals to accept #16 lead wire and mounting screws. Entire package is epoxy encapsulated for mechanical strength.

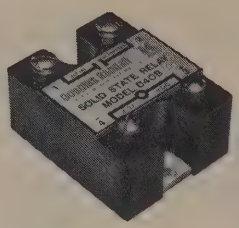
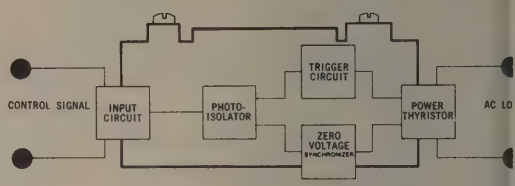
## SOLID STATE RELAYS RATINGS TO 40 AMPS

### AC OUTPUT / DC OR AC CONTROL UL RECOGNIZED / FILE NO. E60556 / C.C. NMFT2





Douglas Randall's line of solid state AC output relays are UL recognized (File E60556 / C.C. NMFT2). Featuring opto-isolation and zero-voltage switching models are available to handle up to 40 Amp. DC or AC control signals can be specified and Form A or B output.

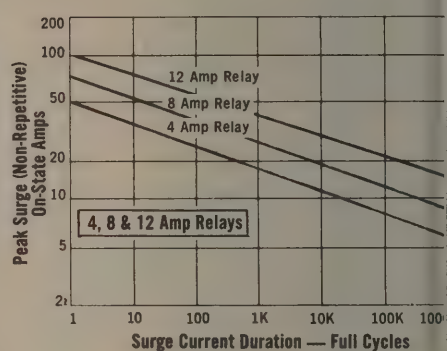
### INPUT SIGNAL DATA (AC OR DC)

| | DC | AC |
|---|---|---|
| Range | 3-32V[5] | 90-240VAC (80-140VDC) |
| Must Operate | 3VDC | 90VDC (80VDC) |
| Must Release | 1VDC | 10VAC (10VDC) |
| Input Impedance | 1000Ω Min., 40KΩ Min. | |
| Isolation | | |
| Signal to Load | 1500V, $10^{10}$Ω DC | |
| Signal to Base | 1500V, $10^{10}$Ω DC | |
| Capacitance | 15 pF Signal to Load | |
| Temperature Range | −30°C to +80°C | |

### MODEL NUMBERS (NOTE 4)

| Output Rating | | DC Signal | AC Signal |
|---|---|---|---|
| 90-140VAC | 4A | D04A | A04A |
| | 8A | D08A | A08A |
| | 12A | D12A | A12A |
| | 25A | D25A | A25A |
| | 40A | D40A | A40A |
| 200-280VAC | 4A | D04B | A04B |
| | 8A | D08B | A08B |
| | 12A | D12B | A12B |
| | 25A | D25B | A25B |
| | 40A | D40B | A40B |

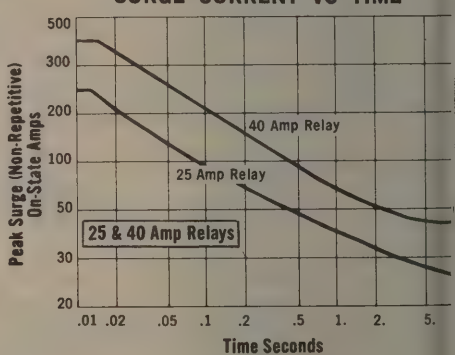
### SURGE CURRENT VS TIME



### OUTPUT DATA (AC OUTPUT)

| Maximum Current | 4A | 8A | 12A | 25A | 40A |
|---|---|---|---|---|---|
| One Cycle Surge Current | 50A | 75A | 100A | 250A | 400A |
| Overload (1 sec., RMS) | 25A | 35A | 40A | 40A | 75A |
| Minimum Current | 10mA Typ. 20mA Max. | 10mA Typ. 20mA Max. | 10mA Typ. 20mA Max. | 10mA Typ. 25mA Max. | 10mA Typ. 25mA Max. |

### SURGE CURRENT VS TIME



**AC Line Voltage:** 90/140V or 200/280V[1] @ 47-63 Hz[2]
**Voltage Drop @ Rated Current:** 1.6V Max.
**Typical Turn-on Voltage:** 5V
**Response Time (DC Signal):** ½ Cycle Max.
**dv/dt[6] Off State:** 5V/μsec
**Commutating:** 100V/μsec

**Off State Leakage Current:**
**90/140VAC** — 4.5mA Typ.
**200/280VAC** — 5.5mA Typ.
**Isolation Output to Base:** 1500V, $10^{10}$Ω DC[3]
**Contact Form:** SPST (NO)[4]

### NOTES AND OPTIONS

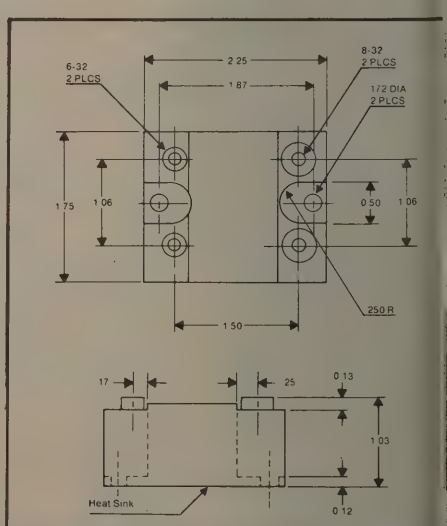
1. Special wide range models can be made which will switch loads from 19V to 140V. These relays can handle either 24VAC or 120VAC loads.
2. Special models are available which switch loads at 400 Hz.
3. 2500VAC isolation can be supplied on request.
4. Form A (SPST-NO) relays are standard. Form B (SPST-NC) switching is optional. Models incorporating this feature are designated by NC. e.g. A40B-NC.
5. All DC models are TTL compatible over the full operating temperature range.
6. All relays incorporate an RC snubber network which prevents false operation from transients up to the dv/dt level shown. More severe transients may require additional external protection. We will review your application and recommend the additional protection needed.

### MECHANICAL SPECIFICATIONS

**Size:** 2¼"L x 1¾"W x 1⅛" maximum.

**Weight:** 4 ounces maximum.

**Termination:** Standard Models — Control Signal: 6-32 screws. Output: 8-32 screws.
Standard Models are furnished with ¼" Quick Connect adapters.
Special Models can be provided with lead wires or other types of termination in OEM quantities. Consult the factory for details.



### SPECIAL DESIGNS

Douglas Randall has designed many special solid state relays, such as a polarized, latching, SPDT unit which will switch 12A at 28VDC. We also have the capability of making special package sizes and terminal arrangements for our solid state relays at moderate tool cost. Your inquiries will be reviewed promptly.

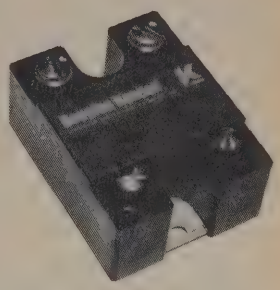
# PROPOSITIONAL CONTROLS

## AC OUTPUT / RESISTOR CONTROL*



Douglas Randall Proportional Control Modules provide a variable AC output voltage to loads up to 15 Amps. They are solid state, full wave SCR phase angle control units, which offer a reliable, compact method of controlling motors, heaters, incandescent lamps, and other AC devices. Standard models vary the output from 0% to 90%.

### INPUT*

Variable Resistor (150,000Ω, 1 watt) — For 120VAC
Variable Resistor (1 Megohm, ½ watt) — For 240VAC

### MODEL NUMBERS

| Output Voltage | 90-130VAC | | | 200-240VAC | | |
|---|---|---|---|---|---|---|
| Model Number | R05A | R10A | R15A | R05B | R10B | R15B |
| Current | 5A | 10A | 15A | 5A | 10A | 15A |

### OUTPUT DATA

| Maximum Current | 5A | 10A | 15A |
|---|---|---|---|
| One Cycle Surge Current | 50A | 75A | 100A |
| Overload (1 sec., RMS) | 25A | 45A | 65A |
| Minimum Current | .040A | .040A | .040A |
| AC Line Voltage | 90/130V or 200/240V @ 47-63Hz | | |

### OPTIONS

**Preset Minimum/Maximum:**
Set internally at the factory to any value in the control range.

**Preset Output:**
Not variable — fixed output is preset internally to any value in the control range.

**Special Ranges, Control Potentiometers and 400 Hz Load Controls are available as special designs.**

**Mechanical Arrangement:**
See AC output relays opposite page.

*Special designs can be driven by DC signals.

## SOLID STATE RELAYS SERIES K
## DC OUTPUT / DC CONTROL SIGNAL

Douglas Randall Series K are SPST (NO) relays which will switch loads of 4, 8 or 12 Amps @ 2-32VDC or 2-55VDC. They provide rapid switching and opto-isolation between input and output. The sensitive inputs are compatible with DTL or TTL logic. Arc free switching makes these relays suitable for hazardous atmospheres.

### MODEL NUMBERS

| Output Voltage* | Current | Model |
|---|---|---|
| 2-32VDC | 4 Amp | K04A |
| | 8 Amp | K08A |
| | 12 Amp | K12A |
| 2-55VDC | 4 Amp | K04B |
| | 8 Amp | K08B |
| | 12 Amp | K12B |

*Inductive loads must be diode suppressed.

### INPUT SIGNAL DATA

| | |
|---|---|
| Range | 3-32VDC |
| Must Operate | 3VDC |
| Must Release | 1VDC |
| Input Impedance | 1000Ω Min. |
| Isolation | |
| Signal to Load | 1500V |
| Signal to Base | 1500V |
| Temperature | −30°C to +80°C |

### MECHANICAL ARRANGEMENT

See AC output relays on page 2144

### OUTPUT DATA

| | |
|---|---|
| Continuous Current | 4A, 8A, or 12A |
| DC Line Voltage | 2-32VDC or 2-55VDC |
| Off State Leakage | 10mA DC |
| Turn On Time | 50 Micro Sec. |
| Turn Off Time | 500 Micro Sec. |
| Voltage Drop @ Rate Current | 1.5VDC Max. |
| Isolation Load to Base | 1500V |

SIZE:
2¼L x 1¾W x 1⅛H Max.

WEIGHT:
4 Ounces Max.

TERMINATION:
Standard Models —

Control Signal:
6-32 Screws

Output:
8-32 Screws

Standard Models are furnished with ¼" Quick Connect adapters.

Special Models can be provided with lead wires or other types of termination in OEM quantities. Consult the factory for details.

See p 3462 for Mechanical Details.

| | | | Logic Supply Cur. | 10mA @ 6VDC |

### AC OUTPUT / DC CONTROL SIGNAL

These relays operate from 5.5VDC (CV-1) or 28VDC (CV-2) signals and switch loads to 3 Amps @ 120/240VAC, 60 Hz. Opto-Isolation provides complete separation of the logic circuit inputs from the AC power loads. Zero-Crossover switching and internal suppression enable the relays to switch AC motors, motor starters, solenoids and lamp loads. Dimension A is 2.00" max.

### DC OUTPUT / DC CONTROL SIGNAL

Operating from 5.5VDC (CV-3) or 28VDC (CV-6) signals, these relays switch loads to 3 Amps @ 55VDC. Opto-Isolation provides complete decoupling of the input signals from the power loads. These relays can switch DC motors, motor starters, solenoids and lamp loads. Dimension A is 2.00" max.

### DC OUTPUT / AC OR DC CONTROL SIGNAL

These relays (sometimes referred to as converters) accept power level signals up to 55VDC (CV-4) or 120VAC (CV-5) and provide an open collector transistor output. When the input terminals are energized, the output transistor switches to the ON state (saturated) providing logic level signals for all standard purposes, including DTL, TTL and CMOS among others. Opto-Isolation provides complete decoupling between the input and output terminals. A ±5VDC power supply is required to operate with these units. Dimension A is 1.25" max.

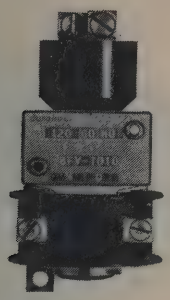
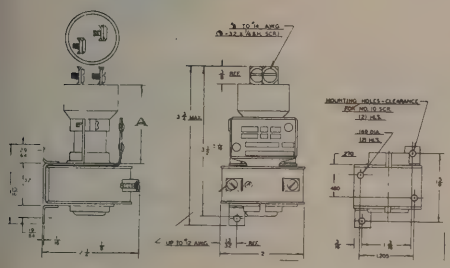
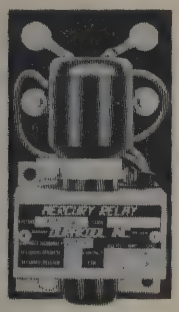
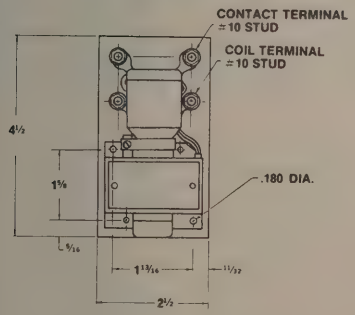
# TIME DELAY RELAYS
## UL









All Durakool time delay relays feature the advantages of mercury to mercury contacts in stainless steel hermetically sealed contact tubes. Release delay functions are performed without the necessity of auxiliary external switches. All catalog numbers shown are U.L. listed bracket mount types; panel mount and cased versions are also available. Virtually hundreds of additional timing ranges and AC/DC operating coil voltages are available.

| Series Timer | Form Contact | Timing Mode of Operation | G.P. Load Ratings AC Amperes | | |

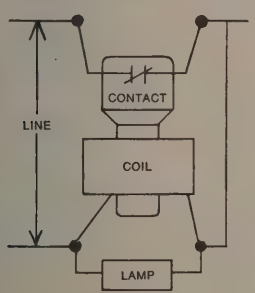
* Typical Timing Tolerances Are ±10%.



## FLASHERS

Durakool BBU Timers function as self-energized recycling flashers when connected as shown above. Flashing cycles can be provided from 15 flashes to 200 flashes per minute in both AC and DC operating coil voltages.

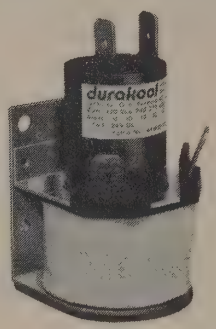
* Flashing Rate Tolerance ±10%.

durakool®

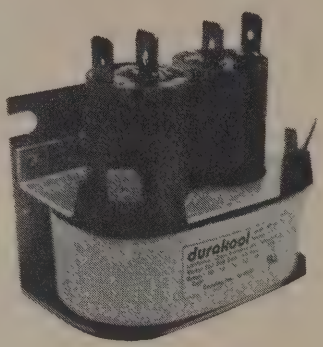
# GENERAL PURPOSE RELAYS—10 AMP—15 AMP—20 AMP

## AFM Series — Normally Open

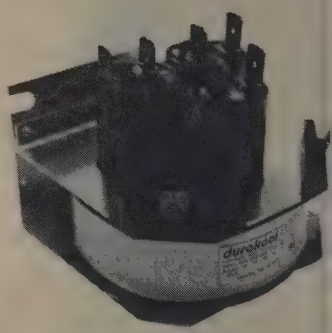
AFM — SINGLE POLE



AFM2 — TWO POLE



AFM3 — THREE POLE



AFM300 Series Single Pole Relays are U.L. Component Rated — General Purpose and Tungsten/U.L. file #35126 and C.S.A. file #22416.

AFM 10, 15 and 20 Amp relays have been tested for 100,000 cycles and meet the criteria of the Underwriter's Laboratory requirements for General Purpose loads and 6000 cycles for Tungsten loads.

At the time of printing, this catalog AFM2 (Two Pole) and AFM3 (Three Pole) series were recently released and had not been submitted to the Underwriter's Laboratories. Please consult the factory for current U.L. status on AFM2 and AFM3 series.

Only popular operating coil voltages are shown, consult the factory for part numbers of other AC and DC coils. Leaded versions are also available. See page 9 for U.L. and non-U.L. contact ratings.

**Typical operating times at normal voltage — operate .04 sec/release .10 sec**

| Contact Rating | Relay Selection Information — Relay Series: One Pole | Two Pole | Three Pole |
|---|---|---|---|
| 10 Amp | AFM10- | AFM210- | AFM310- |
| 15 Amp | AFM15- | AFM215- | AFM315- |
| 20 Amp | AFM20- | AFM220- | AFM320- |

* When ordering, the appropriate operating coil suffix number should follow the selected relay series.

| Coil Voltage Suffix* | AFM SPST — Coil Data — Typical: Coil Voltage | DC Ohms | Steady State Amps | VA | Wattage | Max. Low Pull In Volts |
|---|---|---|---|---|---|---|
| -315 | 6V 60 Hz | 8.8 | .368 | 2.2 | 1.7W | 5.1V |
| -316 | 12V | 35 | .184 | 2.2 | 1.7W | 10.2V |
| -301 | 24V | 140 | .092 | 2.2 | 1.7W | 20.4V |

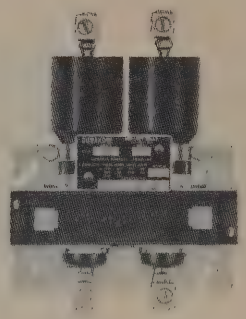
# GENERAL PURPOSE RELAYS—35 AMP—AT 480 VAC

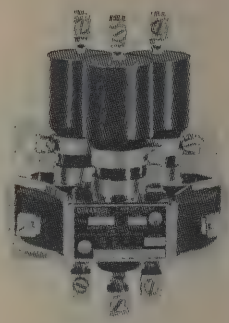
UL CSA

## BFL Series — Normally Open

Model BFL 7000



Model BFL2 7000



Model BFL3 7000

BFL 7000 series devices are U.L. listed under file #E35126 and C.S.A. file #22416. Catalog numbers other than the 7000 series do not carry either U.L. or C.S.A. listings. Contact ratings for this series of relays are shown on page 9. Leaded versions are also available; consult the factory office for part numbers. Many other AC and DC coil voltages are available. Durakool's BF series feature top tube screw type terminations for installations where wire routing requires in and out wiring from the top of the contact tubes. See detailed drawings and data in this catalog.

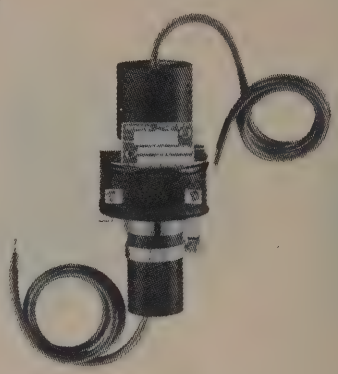
# HIGH VOLTAGE CONTACTORS—2500-3500 V

Durakool High Voltage Units are available in either leaded or industrial field termination types. Operating coil voltages other than part numbers shown are available. Contact factory engineering personnel for special application assistance.



## HIGH VOLTAGE/Leaded Terminations

* Black Rubber Insulation #18 AWG High Voltage Flexible Leads are Rated at 5000 Volt Working Voltage

** Red Polyethylene (Korona-Guard) Insulation #18 AWG High Voltage Leads are Rated at 40,000 DC Working Voltage

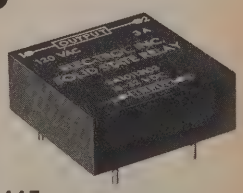
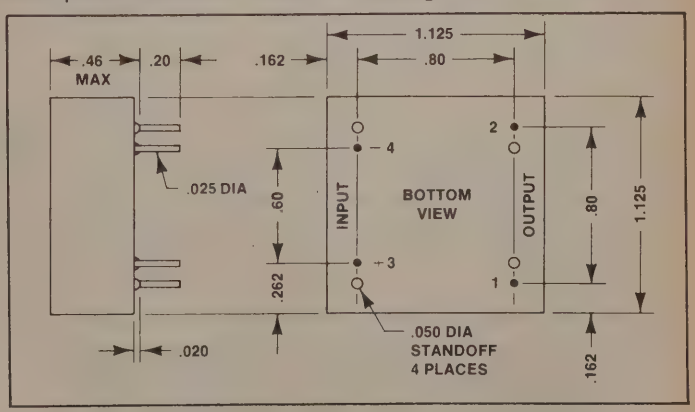
DC input with output switching 120 or 240 VRMS at 1.5 or 3 amps. Mounts directly on printed circuit board, can be driven directly by TTL, has zero crossover switching and photo isolation. **Ask for Catalog 115.**

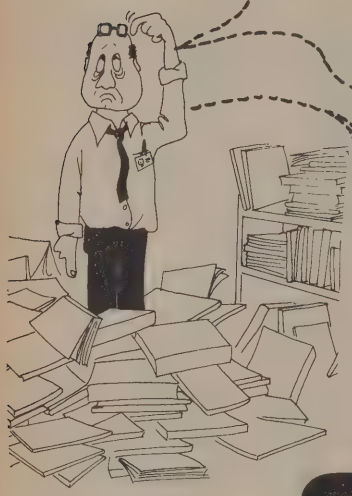




Elec-Trol, Inc., 26477 N. Golden Valley Road, Saugus, CA 91350, (213) 788-7292, (805) 252-8330 TWX 910-336-1556

***What can I use to keep all the manufacturers' product data I receive in order?***

***What system makes filing or retrieving manufacturers' catalogs fast and easy?***



***Which file system have thousands of engineers purchased because they know it works?***

# eem FILE SYSTEM

## THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

**Here's how to order your eem FILE SYSTEM:**

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:
United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

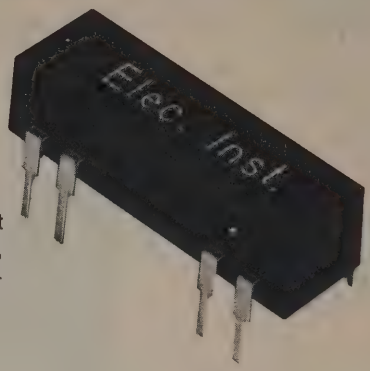
# ELECTRONIC INSTRUMENT & SPECIALTY CORP.

# DIP Reed Relays Epoxy Molded

**Form 1A, 1B, and 1C**

Now high-performance DIP reed relays available in low-cost Lead-Frame configuration. Offering extremely easy access, these superbly engineered relays are made to provide reliable, trouble-free operation at inexpensive prices.



ACTUAL SIZE

- **Low Profile**
- **Automatic Insertion**
- **Improved Accessibility**
- **Driven Directly from TTL & DTL Logic**

Electronic Instrument and Specialty Corporation is a leading producer of reed relays for industrial and commercial applications. EI&S Corp. assures highest quality and superior performance from all reed relays under the most demanding conditions.

For Magnetic Shield, add Suffix H

## CONTACT RATING

**Dry Reed, Form A, B:**
½ amp. max., 200 volts max. with 10 watts power limitation. Initial contact resistance .10 ohm max. Breakdown voltage 300 volts min.

**DRY Reed, Form C:**
¼ amp. max., 28 volts max. with 3 watts power limitation. Initial contact resistance .15 ohm max. Breakdown voltage 250 volts min.

**Mercury Wetted Form A:**
2 amp max., 100 volts max. with 50 watts power limitation. Initial contact resistance .05 ohm max. Breakdown voltage 1000 volts min.

## GENERAL SPECIFICATIONS

| Switching Speed, Typical* | Operate Time | Release Time | Bounce Time |
|---|---|---|---|
| Dry Reed, Form A | .5 ms | .1 ms | .2 ms |
| Dry Reed, Form B | .2 ms | .2 ms | .3 ms |
| Dry Reed, Form C | .5 ms | .1 ms | N.O. .5 ms<br>N.C. 1.5 ms |
| Mercury Wetted, Form A | 2.0 ms | 2.0 ms | .0 ms |

**Insulation Resistance:**
Greater than $1 \times 10^{10}$ ohms, except Form C ($1 \times 10^{9}$) at 100 VDC 40% rel. hum.

**Life Expectancy:**
100 x $10^6$ operations at low level
10 x $10^6$ at rated load
Mercury Wetted 10 X higher

**Operate Temperature:** −30°C to +65°C

**Storage Temperature:** −55°C to +85°C

* Consult factory or local representative for performance details.

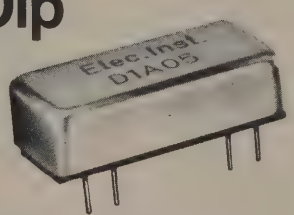
**ORDERING INFORMATION**

To order, specify Catalog Number, Coil Voltage and Optional Electrostatic Shield if required.

**Example:** 2160S (Catalog Number) 12 (Coil Voltage) S (Electrostatic Shield)

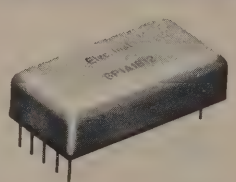
## OTHER STANDARD REED RELAY SERIES

### Dip



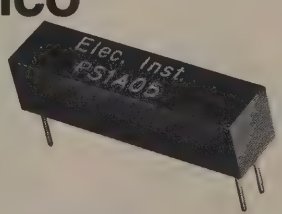
- Contact Form:
  - Dry Reed
    - 1A, 2A, 1B, 1C
  - Mercury Wetted
    - 1A

### Metal Encased



- Contact Form:
  - 1A, 2A, 3A, 4A, 1B, 2B, 1A1B, 1A2B, 2A1B, 2A2B
- .15″ × 1.35″ Grid

### Pico



- Contact Form:
  - 1A, 2A, 1B
- .10″ × .70″ Grid

### Low Thermal Emf

- Contact Form:
  - 1A, 2A
- 3, 5 & 10 Microvolt offsets
- Thermal Offsets Rated at 100% Duty Cycle

**Whenever you need Reed Relays, contact EI&S — the *quality* leader — first.**

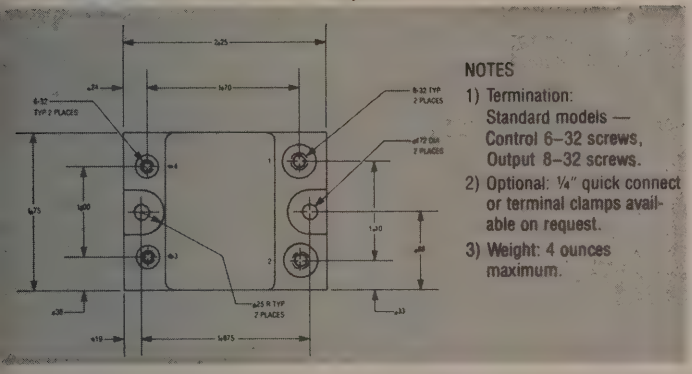
# ELECTRONIC INSTRUMENT & SPECIALTY CORP.

## OPTO-Isolated AC Solid State Relays

- Zero Voltage Turn-on
- 3, 6, 10 and 25 AMP Current Ratings
- Internal Snubber Network
- 120 & 240 VRMS Switching Voltages



NOTES
1) Termination: Standard models — Control 6–32 screws, Output 8–32 screws.
2) Optional: ¼" quick connect or terminal clamps available on request.
3) Weight: 4 ounces maximum.

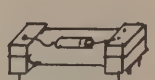
### LR RELAY — Switching and Load Characteristics

The standard switches (Options B and G) are recommended for general use. Low level switching applications require other instrument grade switches (Options C and H) or mercury wetted contacts (Option E).

| Switch Option | Contact Configuration | Description | Maximum Resistive Contact Rating VA | Amps | VDC | Initial Contact Resistance Ohms | Average Minimum Breakdown Voltage VDC | Typical Times in Milliseconds OP | OP Bounce | REL | REL Bounce |
|---|---|---|---|---|---|---|---|---|---|---|---|
| B | Form A Form B | Standard | 10 | .50 | 200 | .100 | 400 / 275 | .45 | .35 | .75 | .35 |
| C | Form A Form B | Instrument Grade (Low Level) | 10 | .50 | 200 | .100 | 300 / 250 | .70 | .35 | .75 | .35 |
| D | Form A | High Voltage Switching | 10 | .50 | 500 | .100 | 1500 / 1350 | .90 | .45 | — | — |
| E | Form A | Mercury Wetted Contacts (Zero Bounce) | 50 | 2.0 | 100 | .050 | 2000 / 1500 | 2.50 | 0.00 | 1.70 | — |
| G | Form C Form B | Standard | 3 | .25 | 28 | .150 | 300 / 250 | .35 | .60 | .30 | 1.40 |
| H | Form C Form B | Instrument Grade (Low Level) | 3 | .25 | 28 | .150 | 300 / 250 | .35 | .60 | .30 | 1.40 |
| K | Form A | Power Switching | 50 | 1.0 | 200 | .200 | 400 / 350 | .70 | .35 | — | — |

### RELAY OPTIONS:

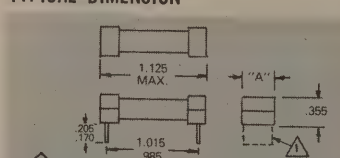
1. Electromagnetic shielding
2. Electrostatic shielding
3. Diode (Top mounted thus: LR1, LR2 mounted internal LR3, LR4, LR5.)



### SWITCH OPTIONS:

| Type | Description |
|---|---|
| 1. B & G | Standard: .5A, 10W, Form A; .25A, 3W, Form C |
| 2. C & H | Low level dry switch, instrument grade |
| 3. E | Mercury wetted contacts |
| 4. D | Hi voltage switching |
| 5. K | Power switching |

### TYPICAL DIMENSION



1 Terminal pin spacing is on .1" grid. Standard terminals are .025 diameter tin coated copper for coil and .022 diameter tin or gold plated "Alloy 52" for switch terminals.

### LR REED RELAY SPECIFICATIONS

**Characteristics:** @ 25°C
**Coil Resistance:** ±10% of nominal.
**Maximum Pull In:** 80% of Nominal Voltage.
**Minimum Drop-Out:** 8% of Nominal Voltage.
**Coil Voltage:** Available in 5, 6 & 24 VDC. See table for nominal resistance values.
**Temperature Range:** Operating: −40°C to +85°C (−40°F to +185°F).
Storage: −40°C to +105°C (−40°F to +220°F).

### DEFINITION OF PART NUMBER

See detail sheets for detail explanation.

**LR 5 2-4A 12-0B ***

- Reed switch type B thru H, K
- Shielding Options:
  - 0 - Basic Relay.
  - 1 - Electromagnetic shielding.
  - 2 - Electrostatic shielding.
  - 3 - Electromagnetic and electrostatic shielding.
- Nominal coil voltage (expressed as two digits).
- Switch configuration.
- Coil terminal location (top view): 1 - Diagonal. 2 - Side. 3 - End.
- Relay width:
  - 1 - .375 Max.
  - 2 - .475 Max.
  - 3 - .575 Max.
  - 4 - .675 Max.
  - 5 - .775 Max.
- Basic Series: 1.25 max. long by .355 max. high.

* D added to the P/N indicates a suppression diode.
* L added to the P/N indicates 390 coil option available on LR1*-1A05-0B or LR1*-1A05-0C.

## LS RELAY — Switching and Load Characteristics

The standard switches (Options B and G) are recommended for general use. Low level switching applications require other instrument grade switches (Options C and H) or mercury wetted contacts (Option E).

| Switch Option | Contact Configuration | Description | Maximum Resistive Contact Rating VA | Amps | VDC | Initial Contact Resistance Ohms | Average Minimum Breakdown Voltage VDC | Typical Times in Milliseconds OP | OP Bounce | REL | REL Bounce |
|---|---|---|---|---|---|---|---|---|---|---|---|
| B | Form A Form B | Standard | 10 | .50 | 200 | .100 | 400 / 275 | .45 | .35 | .75 | .35 |
| C | Form A Form B | Instrument Grade (Low Level) | 10 | .50 | 200 | .100 | 300 / 250 | .70 | .35 | .75 | .35 |
| D | Form A | High Voltage Switching | 10 | .50 | 500 | .100 | 1500 / 1350 | .90 | .45 | — | — |
| E | Form A | Mercury Wetted Contacts (Zero Bounce) | 50 | 2.0 | 100 | .050 | 2000 / 1500 | 2.50 | 0.00 | 1.70 | — |

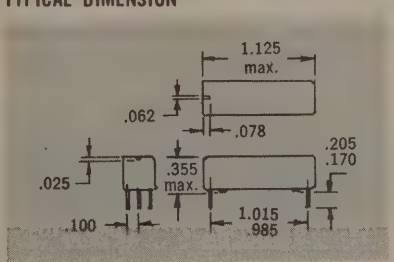
### RELAY OPTIONS:

1. Electromagnetic shielding
2. Electrostatic shielding
3. Diode suppression

### SWITCH OPTIONS:

| Type | Description |
|---|---|
| 1. B & G | Standard: .5A, 10W, Form A; .25A, 3W, Form C |
| 2. C & H | Low level dry switch, instrument grade |
| 3. E | Mercury wetted contacts |
| 4. D | Hi voltage switching |
| 5. K | Power switching |

### TYPICAL DIMENSION



### LS REED RELAY SPECIFICATIONS

**Characteristics:** @ 25°C
**Coil Resistance:** ±10% of nominal.
**Maximum Pull In:** 80% of Nominal Voltage.
**Minimum Drop-Out:** 8% of Nominal Voltage.
**Coil Voltage:** Available in 5, 6 & 24 VDC. See table for nominal resistance values.
**Temperature Range:** Operating: −40°C to +85°C (−40°F to +185°F).
Storage: −40°C to +105°C (−40°F to +220°F).

### DEFINITION OF PART NUMBER

LS 04 1 - 1 - 4A 24 - 0 B

- LS — Basic Series 1.125 max. long x .355 max. high encapsulated reed relay
- 04 — Relay Width and Pin Spacing Indicator: 01 - .375 max. wide* 02 - .475 max. wide* 03 - .575 max. wide* 04 - .675 max. wide*
- 1 — Coil Terminal Location (top view): 0 - Special 1 - Diagonal 2 - Side 3 - End
- 1 — Number of Coils
- 4A — Contact Number and Form
- 24 — Nominal Voltage (expressed as two digits)
- 0 — Options:
  - 0 - Basic relay
  - 1 - Electromagnetic shield
  - 2 - Electrostatic shield
  - 3 - Electromagnetic & electrostatic shield
  - 4 - Diode suppression
  - 5 - Diode suppression w/electromagnetic shield
  - 6 - Diode suppression w/electrostatic shield
  - 7 - Diode suppression w/electromagnetic & electrostatic shield
- B — Switch Option (B, C, D, E, G, H, K)

# CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
# DER PRODUKTKATALOG FÜR ELEKTRONIKER
# ELECTRONIC ENGINEERS CATALOGUE

**The 1978 edition is out...and the response is in...**
**IMMEDIATE AND OVERWHELMING**

**ACCEPTANCE**

The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to—and from—Western Europe.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 product headings & cross-references alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

# THE dB RELAY

## HALF THE PRICE OF OTHER MERCURY RELAYS

## AND IT WORKS IN ALL POSITIONS!

OUR dB RELAYS OFFER EXCEPTIONAL RELIABILITY AT EXTREMELY LOW COST

Self-healing contacts in a welded steel contact chamber have demonstrated a Mean Cycle between Failure of over 2.0 billion operations. This means less down time for your equipment.

Contact resistance is the same regardless of whether the load is a full 20 watts or a bone dry signal of nanowatt level. The resistance of the wet mercury film contacts changes by less than 0.02 ohms over its extended life. Your product may need expensive recalibration.

A patented design keeps the mercury film in place within the contact chamber. Operation is unaffected by mounting position. You have total packaging flexibility without regard for relay orientation.

The dB relay has no contact bounce. There can be no false triggering of sensitive following solid state circuits.

The contact chamber of this relay is built of rugged steel. It is not a fragile glass capsule. Early failures due to stressed or leaking glass switching capsules are eliminated.

Terminal pin and coil resistance options permit the direct replacement of many dry reed and mercury wetted relay models.

The dB relay is not a premium priced product. It sells for about half the price of most mercury relays and less than some dry reed relays.

Why settle for less than optimum performance or suffer with restrictions on equipment orientation when you can use this problem solving product?

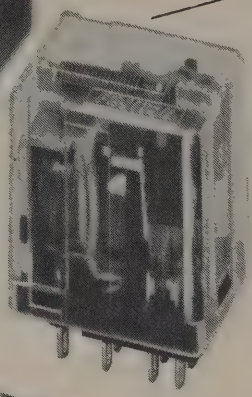
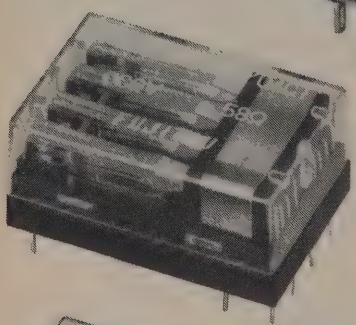
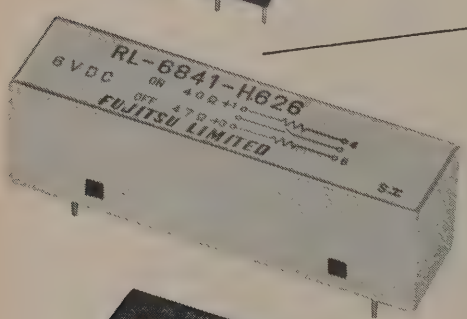
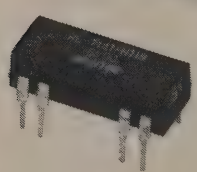
# FUJITSU: RELAYS









### HEAVY DUTY GENERAL PURPOSE RELAYS
### FRL250 SERIES

Designed with particular attention to reliability, cost performance and versatility of application. Offered with three different contact arrangements (SPDT, DPDT and 3PDT), ac and dc coils, and with a selection of mountings that include solder, plug-in, PCB and quick connect terminals. Capable of handling loads up to 10A at 30 Vdc or 10A at 240 Vac, resistive. Available in 6, 12, 24, 48, 100, and 110 Vdc and 12, 24, 48, 100, 120, 200 and 240 Vac. Size: 2.165 x 1.406 x 1.531 inches. Price range for 1000 pieces from $1.81 to $2.60, depending on model. UL recognized (UL File E 63614) and CSA certified (CSA File LR 40304-1). Numerous applications include industrial control equipment, vending and amusement machines, etc.

### MINIATURE GENERAL PURPOSE RELAYS
### FRL260 SERIES

Relays with proven performance, versatility and top quality. Offered in choice of ac or dc coils and with PCB terminals, solder/plug-in or quick connect. Three major types of relays are: DPDT rated up to 10A at 30 Vdc or 120 Vac, resistive; 4PDT rated up to 3A at 30 Vdc or 120 Vac, resistive; 4PST rated up to 3A at 30 Vdc or 120 Vac, resistive. Available in 6, 12, 24, 48 and 100 Vdc, and 6, 12, 24, 48, 100, 120, 200 Vac. Standard case size: 1.291 x .858 x 1.110 inches. Bracket case also available. Price range for 1000 pieces from $1.76 to $2.32, depending on model. UL recognized (UL File E 63614/E 63615) and CSA certified (CSA File LR 40304-2). For wide range of industrial applications. 4PST relay has bifurcated contacts for low level signals and other light loads.

### FLAT PACKAGE RELAYS FOR PC BOARD MOUNTING
### FRL410

Low power consumption relays available in both DPDT and 4PDT (2 Form C and 4 Form C) contact arrangements. Bifurcated contacts assure high reliability for numerous demanding applications, including telecommunications, data processing and controls. Capable of handling 1A at 30 Vdc or 1A at 100 Vac, resistive. Available in 5, 6, 12, 24 and 48 Vdc. Molded base offers flux contamination immunity. Low profile. Stands 1.21 x .82 x .49 inch high. Price range for 1000 pieces from $1.73 to $2.60, depending on model.

### MAGNETIC LATCHING REED RELAYS
### 6800 SERIES

The blades of this relay remain magnetically latched even after the applied magnetic field is removed, making it ideal for applications where the memory function is essential. There is no power dissipation during latching. Available in 1 Form A, 2 Form A and 3 Form A, and in 6, 12, 24, and 48 Vdc. Popular .1" pin spacing. Size: 1.89" long by .47" high. Price range for 1000 pieces from $2.87 to $6.48, depending on model. Typical applications: Memory elements, vending machines, control systems, display devices, measuring and testing instruments.

### DIP REED RELAYS FOR PC BOARD MOUNTING
### RL7100, FRL700, FRL710L SERIES

Compatible with standard 14 pin dual inline IC package and can be driven directly by TTL and DTL's. Epoxy molded and highly sensitive. The variety available from Fujitsu is almost limitless. Take your choice of relays with or without diodes: regular or latching type; with or without magnetic shielding; with or without electrostatic shielding; 1 Form A or 2 Form A; 5, 6 or 12 Vdc. Price range for 1000 pieces from $1.46 to $2.63, depending on model. Whether your application is for data processing, telecommunications, control systems, vending machines or display devices, Fujitsu should have a DIP Reed Relay for you.

AND CAPACITORS AND CONNECTORS AND

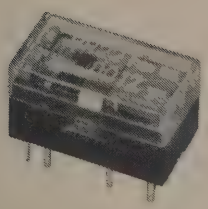
# FUJITSU: RELAYS

### MINIATURE RELAYS FOR PC BOARD MOUNTING
### BR111 SERIES

Low cost SPDT (1 Form C) relay with a load handling capability of 3A at 24 Vdc or 3A at 100 Vac, resistive. Available in 5, 6, 9, 12 and 24 Vdc. Has low coil power dissipation of 360 mW. This sensitive relay is designed to be mounted directly on PC boards and features small, simplified construction. Stands .85 x .67 x .89 inch high. Price depending on model. Ideal for use in numerical control equipment, vending machines, game machines, automotive and other control applications.

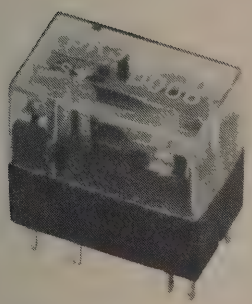
### ULTRA MINIATURE RELAYS FOR PC BOARD MOUNTING
### BR211 SERIES

The ultra small size (only .1 cubic inch) allows high component density for savings in both equipment size and cost. These highly sensitive relays with SPDT (1 Form C) contacts have load handling capabilities of 1A at 24 Vdc or 0.5A at 100 Vac, resistive. Available in 1.5, 3, 5, 6, 9, 12, and 24 Vdc. Molded base offers flux contamination immunity. Has .1" pin spacing for PC board applications and stands only .610 x .413 x .413 inch high. Price range for 1000 pieces from $0.69 to $1.38, depending on model. Ideal for use in audio and radio communications, office and vending machines, automotive and other control applications.



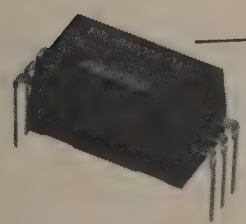
### ULTRA MINIATURE DPDT RELAYS FOR PCB MOUNTING
### BR221 SERIES

Virtually the same reliable relay as above, except for contact form. DPDT (2 Form C) contacts offer more flexibility from relay mounted in equally small area. Stands only .846 x .413 x .465 inch high. Price range for 1000 pieces from $1.17 to $1.38, depending on model.



### MINIATURE RELAYS FOR PC BOARD MOUNTING
### BR321 SERIES

Slightly larger version of the ultra miniature PCB relays featured above. Comes with DPDT (2 Form C) contacts and capable of handling 3A at 24 Vdc or 3A at 100 Vac, resistive. Available in 5, 6, 12, and 24 Vdc. Stands .83 x .53 x .63 inch high. Price range for 1000 pieces from $1.50 to $2.00, depending on model.



### MOLDED MICRO REED RELAYS FOR PCB MOUNTING
### FRL640 SERIES

Epoxy molded, low profile PCB relay has many applicational advantages over others; immersion cleaning safety is one. Solid construction is another. Comes in 1 Form A, 1 Form B, 2 Form A and 2 Form B contacts. Low power consumption, low contact noise and stable contact resistance. Type S for switching under standard load and Type K for switching under heavy load condition. Popular .1" pin spacing. Lengthwise pin spacing .8" or 1.0". Stands only .354" high. Magnetic shielding for isolation offered optionally. Price range for 1000 pieces from $0.92 to $2.06, depending on model. Ideal for audio equipment, data processing, telecommunications, measuring and control equipment applications.

Call or write Fujitsu America, Inc. for literature or more information on any of these products.

DRY REED RELAYS

# 741 & 83 SERIES

## 741 SERIES

## MOLDED-EPOXY SINGLE-IN-LINE PACKAGE (SIP)

- Designed for high density packaging
- Two relays can be mounted in a single DIP socket
- Available in 1A and 1B forms
- Molded epoxy
- Environmental immunity assured
- Logic compatible
- Interface with microprocessor

## 83 SERIES

## MOLDED-EPOXY DUAL-IN-LINE PACKAGE (DIP)

- Standard DIP package fits TO-116 socket
- Available 1A, 1B, 1C and 2A forms
- Molded epoxy for environmental immunity
- Logic compatible

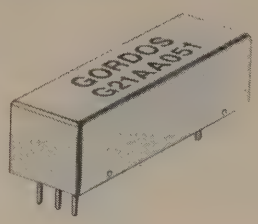
DRY REED RELAYS

# G2 & H SERIES

## G2 SERIES

## MINIATURE OPEN FRAME

- Popular standard .100" x 1.00" PCB mounting
- Available in 1 thru 4 form A, 1 form C, and 1 form B
- Available with 1000V high voltage contact (form 1A)
- Magnetic box shield standard on all G2 relays



## H SERIES

## STANDARD OPEN FRAME

- .200" x 2.400" pin spacing (1A and 2A form)
- 1.0 Ampere switching (1A and 2A form)
- 3.0 Ampere switching (1A form)
- Magnetic box shield standard on all relays
- Available with 50W high power contact

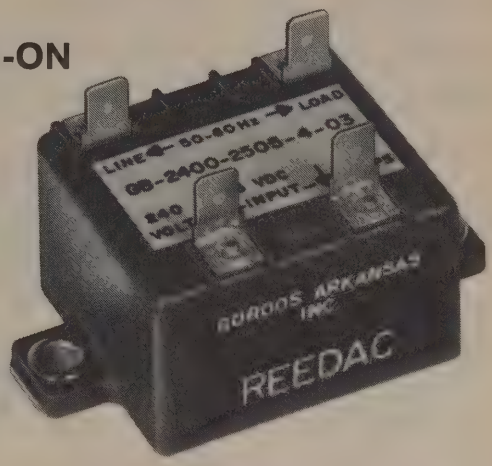
## HYBRID (REED-COUPLED) RANDOM TURN-ON AC POWER SOLID STATE RELAY



- Output rating — 24 to 280 VAC, .05 to 25 amps RMS
- 5 VDC TTL compatible control input
- 1500 VAC isolation
- Standard output RC network
- Standard diode clamp
- U.L. recognized file E46203 and E61991
- CSA certified file 38595

## SPECIFICATIONS AND RATINGS

| CONTROL CIRCUIT (INPUT) | | |
|---|---|---|
| Nominal voltage rating | 5.0 VDC[1] | |
| Must-operate voltage | 4.0 VDC | |
| Must-release voltage | 0.5 VDC | |
| Maximum voltage rating | 7.5 VDC | |
| Nominal current rating | 12.5 ma | |
| **POWER CIRCUIT (OUTPUT)** | | |
| Max. load current | 10.0 a rms | 25.0 a rms |
| Max. 1-cycle surge | 100 a peak | 250 a peak |
| Max. on-state voltage | 1.8 V | |
| Off-state dv/dt[2] | 200 V/$\mu$S | |
| Max. off-state leakage | 15 ma rms | |
| Switching voltage range | 24 to 280 V rms | |
| Minimum load current | .050 a rms | |
| **OPERATING RATING** | | |
| Isolation to ground | 1500 VAC | |
| Isolation input to output | 1500 VAC | |
| Sine wave frequency range | 47 to 63 Hz | |
| Max. turn-on time | 1.5 mS | |
| Max. turn-off time | ½ AC cycle | |
| Operating temperature range | −25 to +80°C | |
| Storage temperature range | −40 to +100°C | |

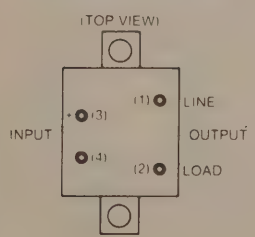
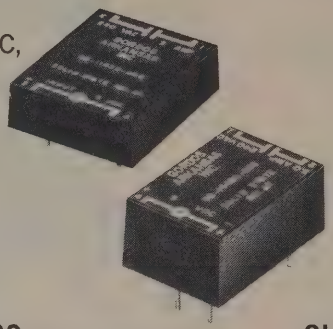
## CONNECTIONS



# 11000 & 14000 & 15000 SERIES

## ALL-SOLID-STATE PHOTO-COUPLED ZERO VOLTAGE TURN-ON AC POWER SOLID STATE RELAY

### 11000 & 14000 SERIES



- Output rating — 24 to 270 VAC, .05 to 3.0 amps RMS
- 5 or 12 VDC control (TTL compatible)
- 2500 VAC isolation
- Standard output RC network
- U.L. recognized file E46203
- CSA certified file 38595

### 15000 SERIES

- Output rating — 24 to 280 VAC, .05 to 40 amps RMS
- 3 to 32 VDC TTL compatible control output
- 2500 VAC isolation
- Standard output RC network
- Reverse polarity protected
- U.L. recognized file E46203 and E61991
- CSA certified file 38595

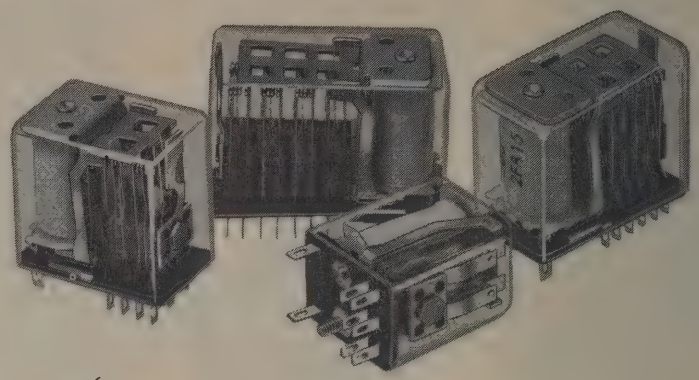
# Allied Control Relays

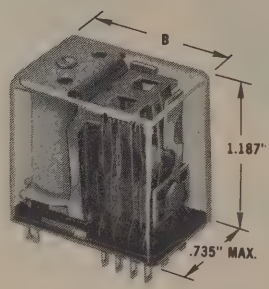
## General Purpose Relays

### CRADLE® SERIES T154/163

### DC Relays — Current and Voltage Adjusted

### AC Relays — Voltage Adjusted





| DIMENSION B | |
|---|---|
| 2C | .937 |
| 4C | 1.172 |
| 6C | 1.391 |
| 8C | 1.594 |

## FEATURES

- **T154 Single-Point Contacts**
- **T163 Bifurcated Contacts**
- **Proven Cradle® reliability**
- **100 million mechanical operations**
- **Contact selection to match application**
- **Contact configuration:**
  DC Voltage: up to 8 Form C
  AC Voltage: up to 4 Form C
- **Input voltages:**
  DC Voltage: from 3 VDC to 115 VDC
  AC Voltage: from 6 VAC to 220 VAC
  50/60 Hz
- **Sensitivity as low as 20 MW/pole** (DC Voltage only)
- **Low-priced relays**
- **Versatile mounting configurations**
- **High density packaging**
- **UL File E20604 / CSA File 34171**

## TYPICAL OPERATING CONDITIONS @ 25°C

### ELECTRICAL

**Minimum drop-out** (DC voltage):
10% of maximum pick-up value (5% for single and double-pole relays)

**Dielectric Strength:**
1000 VRMS coil to contacts and between gaps
500 VRMS between contact gaps on ultrasensitive relays

**Insulation resistance:**
10,000 megohms minimum

**Capacitance, DC Voltage:**
Closed contacts to frame 3.0 pf
Open contacts to frame 3.0 pf
Between open contacts 3.0 pf
(energized or de-energized)

**Capacitance, AC Voltage:**
Contact to contact 3.0 pf
Coil to contact 3.0 pf
Coil to frame 30 pf

**Operate time, DC Voltage:**
15 MS max. at nominal voltage

**Operate time, AC Voltage:** 25 MS

**Release time, DC Voltage:**
8 MS max. at nominal voltage

**Release time, AC Voltage:** 25 MS

### ENVIRONMENTAL

**Ambient temperature:** −55°C to 71°C

**NOTES:**

1. Single-point contacts shown as standard; for bifurcated contacts, substitute "163" for "154".
2. Solder lug terminals shown as standard; for printed circuit mounts, add "P" after "T", "TS" or "TSS".
   **Note:** Solder Lug terminals not supplied on printed circuit mount relays.
3. Form C contact arrangement shown as standard; for Form A, B or D, substitute appropriate letter.
4. 5-amp and 10-amp contacts are also available for Standard DC and AC single-point-contact relays; if desired, add "F" after "T" for 5-amp; and add "Y" after "T" for 10-amp.

## Midget Power Relays

**NEW!**
**GH SERIES — 10 AMPS**
**GY SERIES — 3 AMPS**

### FEATURES

- **Low contact resistance**
- **UL and CSA listed**
- **GH Series:** Smallest 10 amp relay

### SPECIFICATIONS

**SERIES GH**

**Contact resist.:** 100 milliohms max.

**Operate time:**
SPDT, DPDT: 20 ms max.
4PDT: 25 ms max.

**Release time:**
SPDT, DPDT: 20 ms max.
4PDT: 25 ms max.

**Power consumption:**
SPDT, AC: app. 1 VA (60 Hz)
SPDT, DC: app. 0.8W
DPDT, AC: app. 1.2 VA (60 Hz)
SPDT, DC: app. 0.9W
4PDT, AC: app. 2 VA (60 Hz)
4PDT, DC: app. 1.5W

**SERIES GY**

**Contact resist.:** 100 milliohms max.

**Operate time:** 20 ms max.

**Release time:** 20 ms max.

**Power consumption:**
DPDT, AC: app. 1 VA (60 Hz)
DPDT, DC: app. 0.8W
4PDT, AC: app. 1.2 VA (60 Hz)
4PDT, DC: app. 0.9W

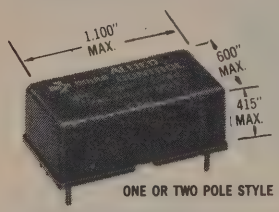
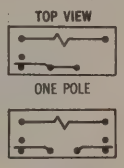
# Allied Control Relays

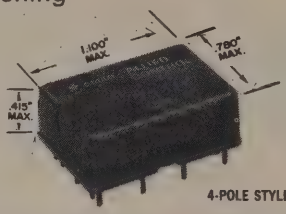
## Low Profile Relays

**SERIES MPC** — Miniature PC, Standard
**SERIES MPCS** — Miniature PC, Sensitive
**SERIES MPCL** — Miniature PC, Latching



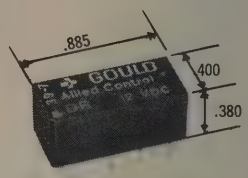
ONE OR TWO POLE STYLE





4-POLE STYLE

**SERIES DR** — DIP



ACTUAL SIZE

### FEATURES

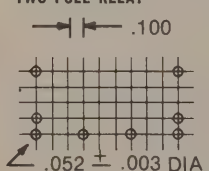
- **MPC:** Smallest 4-pole
- **DIP:** Lowest profile
- **Low cost**
- **Long life with high reliability**
- **Sensitive coil operation:**
  1 amp @ 28 VDC (DR) 2 amp @ 28 VDC (MPC's)
- **Sealed construction available**
  **Wave solder and cleanable**

### SERIES MPC — STANDARD VERSION

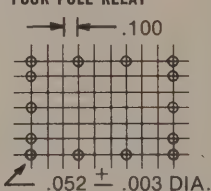
| Catalog No. | Coil Res. | Input | Pull-in | Drop-out | Pick-up Power | Contact Rating |
|---|---|---|---|---|---|---|
| **DPDT[1]** | | | | | | |
| MPC-2C-5VDC | 35Ω | 5V | 3.7V | 0.37V | 400mW | 2 Amp |
| MPC-2C-6VDC | 50Ω | 6V | 4.5V | 0.45V | 400mW | 2 Amp |
| MPC-2C-12VDC | 200Ω | 12V | 9.0V | 0.9V | 400mW | 2 Amp |
| MPC-2C-20VDC | 550Ω | 20V | 15.0V | 1.5V | 400mW | 2 Amp |
| MPC-2C-24VDC | 800Ω | 24V | 18.0V | 1.8V | 400mW | 2 Amp |
| MPC-2C-48VDC | 3,200Ω | 48V | 36.0V | 3.6V | 400mW | 2 Amp |
| **4PDT[2]** | | | | | | |
| MPC-4C-5VDC | 26Ω | 5V | 3.7V | 0.37V | 550mW | 2 Amp |
| MPC-4C-6VDC | 38Ω | 6V | 4.5V | 0.45V | 550mW | 2 Amp |
| MPC-4C-12VDC | 150Ω | 12V | 9.0V | 0.9V | 550mW | 2 Amp |
| MPC-4C-20VDC | 400Ω | 20V | 15.0V | 1.5V | 550mW | 2 Amp |
| MPC-4C-24VDC | 600Ω | 24V | 18.0V | 1.8V | 550mW | 2 Amp |
| MPC-4C-48VDC | 2,400Ω | 48V | 36.0V | 3.6V | 550mW | 2 Amp |

**NOTES:**
1. For SPDT, substitute "1C" for "2C" (i.e., MPC-1C-5VDC).
2. For a 3PDT, substitute "3C" for "4C."

**TWO POLE RELAY**



**FOUR POLE RELAY**



**Note:** Consult factory for dual source footprint layout.

### SERIES MPCS — SENSITIVE VERSION

Operates from TTL — Driver Circuits

| Catalog No. | Coil Res. | Input | Pull-in | Drop-out | Pick-up Power | Contact Rating |
|---|---|---|---|---|---|---|
| **DPDT[1]** | | | | | | |
| MPCS-2C-5VDC | 80Ω | 5V | 46mA | 5mA | 160mW | 2 Amp |
| MPCS-2C-6VDC | 125Ω | 6V | 4.5V | 0.45V | 160mW | 2 Amp |
| MPCS-2C-12VDC | 500Ω | 12V | 9.0V | 0.9V | 160mW | 2 Amp |
| MPCS-2C-24VDC | 2,000Ω | 24V | 18.0V | 1.8V | 160mW | 2 Amp |
| MPCS-2C-48VDC | 8,000Ω | 48V | 36.0V | 3.6V | 160mW | 2 Amp |

**NOTE:**
1. For SPDT, substitute "1C" for "2C" (i.e., MPCS-1C-5VDC).

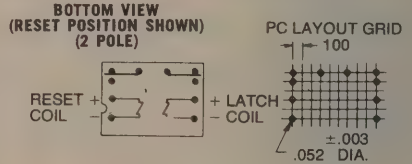
### NEW! SERIES MPCL — LATCHING VERSION

Series MPCL — Latching Version

Two completely isolated coils; no need for protection due to continuous application of coil voltage.

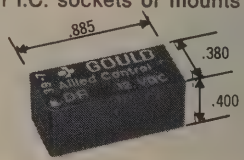
| Catalog No. | Coil Res. | Input | Latch or Reset Voltage | Power | Contact Rating |
|---|---|---|---|---|---|
| **DPDT[1]** | | | | | |
| MPCL-2C-5VDC | 28Ω | 5V | 3.7V | 500mW | 2 Amp |
| MPCL-2C-6VDC | 40Ω | 6V | 4.5V | 500mW | 2 Amp |
| MPCL-2C-12VDC | 160Ω | 12V | 9.0V | 500mW | 2 Amp |
| MPCL-2C-24VDC | 640Ω | 24V | 18.0V | 500mW | 2 Amp |
| MPCL-2C-48VDC | 2,500Ω | 48V | 36.0V | 500mW | 2 Amp |

**NOTE:**
1. For SPDT, substitute "1C" for "2C" (i.e., MPCL-1C-5VDC).



### NEW! SERIES DR — DUAL-IN-LINE

Fits standard 16 pin I.C. sockets or mounts directly on PC board.



| Catalog No. | Coil Res. | Input | Pull-in | Drop-out | Pick-up Power | Contact Rating |
|---|---|---|---|---|---|---|
| **DPDT** | | | | | | |
| DR-2C-3VDC | 25Ω | 3V | 2.3V | 0.12V | 200mW | 1 Amp |
| DR-2C-5VDC | 63Ω | 5V | 3.7V | 0.19V | 200mW | 1 Amp |
| DR-2C-6VDC | 100Ω | 6V | 4.5V | 0.23V | 200mW | 1 Amp |
| DR-2C-9VDC | 250Ω | 9V | 6.8V | 0.34V | 200mW | 1 Amp |
| DR-2C-12VDC | 400Ω | 12V | 9.0V | 0.45V | 200mW | 1 Amp |
| DR-2C-18VDC | 1,000Ω | 18V | 13.5V | 0.70V | 200mW | 1 Amp |
| DR-2C-24VDC | 1,600Ω | 24V | 18.0V | 0.90V | 200mW | 1 Amp |
| DR-2C-36VDC | 4,000Ω | 36V | 27.0V | 1.4V | 200mW | 1 Amp |
| DR-2C-48VDC | 6,400Ω | 48V | 36.0V | 1.8V | 200mW | 1 Amp |

### MINIATURE ROUND CAN RELAYS

Series MH/MHB/MHJ — DC Relays — 5 amps

| Catalog No. | Contact Arrangement | Coil Res. | Input | Temp. Range | Contact Rating |
|---|---|---|---|---|---|
| **SERIES MH — DC RELAYS** | | | | | |
| MH-6D-12VDC | DPDT | 82Ω | 12.0V | | 5 Amp |
| MH-6D-26.5VDC | DPDT | 400Ω | 26.5V | | 5 Amp |
| MH-6D-115VDC | DPDT | 6,500Ω | 115.0V | | 5 Amp |
| MH-12D-12VDC | 4PDT | 60Ω | 12.0V | −55°C | 5 Amp |
| MH-12D-26.5VDC | 4PDT | 300Ω | 26.5V | to | 5 Amp |
| MH-12D-115VDC | 4PDT | 5,000Ω | 115.0V | +85°C | 5 Amp |
| MH-18D-12VDC | 6PDT | 48Ω | 12.0V | | 5 Amp |
| MH-18D-26.5VDC | 6PDT | 240Ω | 26.5V | | 5 Amp |
| MH-18D-115VDC | 6PDT | 3,500Ω | 115.0V | | 5 Amp |
| **SERIES MHB — DC RELAYS** | | | | | |
| MHB-6D-12VDC | DPDT | 65Ω | 12.0V | | 5 Amp |
| MHB-6D-26.5VDC | DPDT | 325Ω | 26.5V | | 5 Amp |
| MHB-6D-115VDC | DPDT | 6,000Ω | 115.0V | | 5 Amp |
| MHB-12D-12VDC | 4PDT | 50Ω | 12.0V | −65°C | 5 Amp |
| MHB-12D-26.5VDC | 4PDT | 250Ω | 26.5V | to | 5 Amp |
| MHB-12D-115VDC | 4PDT | 5,000Ω | 115.0V | +125°C | 5 Amp |
| MHB-18D-12VDC | 6PDT | 40Ω | 12.0V | | 5 Amp |
| MHB-18D-26.5VDC | 6PDT | 200Ω | 26.5V | | 5 Amp |
| MHB-18D-115VDC | 6PDT | 3,500Ω | 115.0V | | 5 Amp |
| **SERIES MHJ — DC RELAYS** | | | | | |
| MHJ-12D-12VDC | 4PDT | 50Ω | 12.0V | | 5 Amp |
| MHJ-12D-26.5VDC | 4PDT | 250Ω | 26.5V | −65°C | 5 Amp |
| MHJ-12D-115VDC | 4PDT | 5,000Ω | 115.0V | to | 5 Amp |
| MHJ-18D-12VDC | 6PDT | 40Ω | 12.0V | +125°C | 5 Amp |
| MHJ-18D-26.5VDC | 6PDT | 200Ω | 26.5V | | 5 Amp |
| MHJ-18D-115VDC | 6PDT | 3,500Ω | 115.0V | | 5 Amp |

(MHJ capabilities 20G to 2000 Hz)

| | | | | | |
|---|---|---|---|---|---|
| **SERIES MHB-MHJ — AC RELAYS** | | | | | |
| MHB-6A-115VAC | DPDT | 4215/4215 | 115.0V | −65°C to +125°C | 5 Amp |
| MHJ-12A-115VAC | 4PDT | 2765/2765 | 115.0V | | 5 Amp |
| MHJ-18A-115VAC | 6PDT | 2635/2635 | 115.0V | | 5 Amp |

(MHJ capabilities 20G to 2000 Hz)

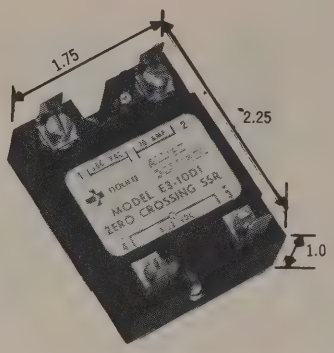
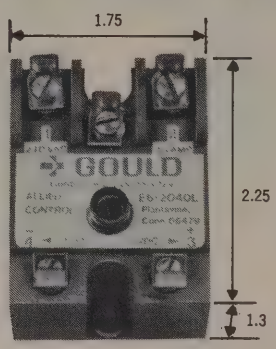
GOULD

# Allied Control Relays

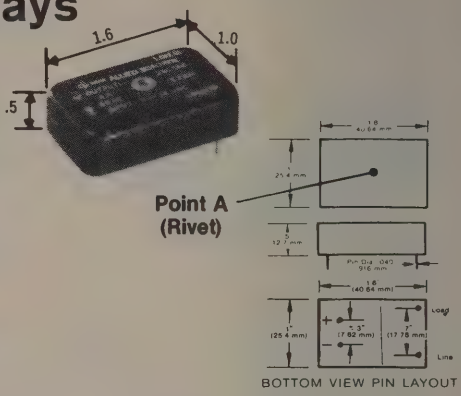
## Solid State Relays



**SERIES E3** — Optically isolated, zero crossing.



**SERIES E6** — Optically isolated, zero crossing, "integral cycling," optional output light.



**SERIES E22** — Optically isolated, miniature full-wave power switching pc mounting.

## FEATURES

- Bounceless switching
- Long life
- Integrated circuit compatibility
- High noise immunity
- Photo isolated

**Note: Consult factory for technical data on heat sink and special applications:**

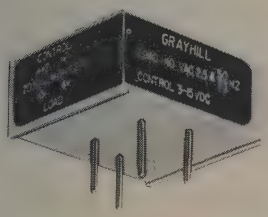
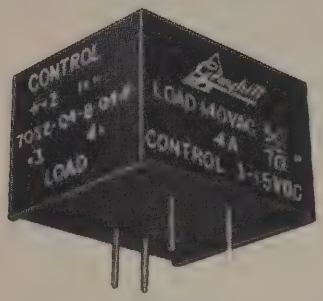
# SOLID STATE RELAYS

## SWITCH HIGH POWER AC LOADS FROM LOGIC CIRCUITS WITH SOLID STATE RELIABILITY THAT VIRTUALLY ELIMINATES REPLACEMENT

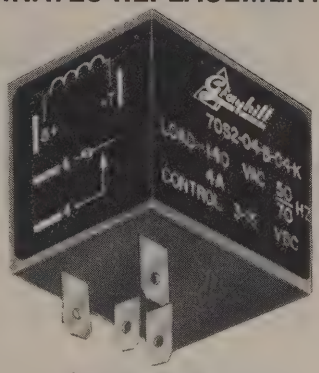
## THE INTERMEDIATE SIZE SPACE SAVERS



MICROCUBE
PC MOUNT — PACKAGE STYLE H
1.2" x 1.0" x 0.475" HIGH



MINICUBE
PC MOUNT — PACKAGE STYLE F
1.2" x 1.0" x 0.850" HIGH



MINICUBE — PLUG IN
FITS STANDARD SOCKET — PACKAGE STYLE K
1.2" x 1.0" x 1.0" ABOVE SOCKET

### DESIGN FEATURES

- LOGIC COMPATIBLE, OPTICALLY COUPLED
- INCLUDES ZERO VOLTAGE TURN-ON CIRCUIT
- TRANSIENT PROTECTED
- HIGH DV / DT AND BLOCKING VOLTAGE
- DESIGNED TO SWITCH INDUCTIVE LOADS

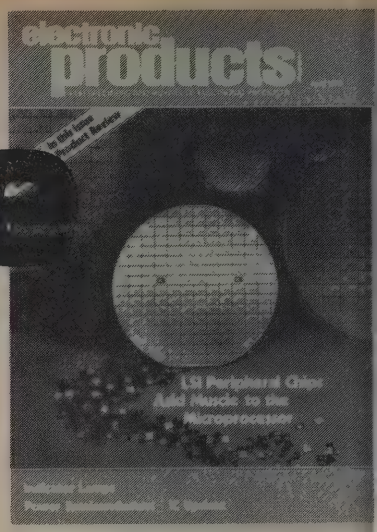
# stay up to date



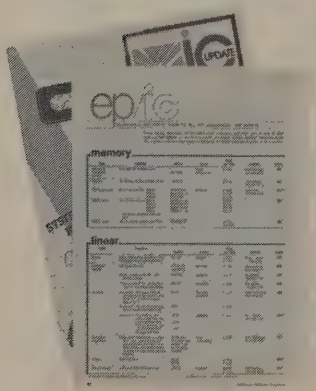
**SUBSCRIBE TO ELECTRONIC PRODUCTS MAGAZINE. IT'S YOUR *COMPLETE* GUIDE TO EVERYTHING THAT'S NEW IN THE FAST-CHANGING WORLD OF ELECTRONIC PRODUCTS AND SYSTEMS.**

**FEATURE STORIES** every month on electronic products, applications and availability.

**FORUMS**—Reports on meetings of manufacturers, users and distributors. Get the very latest news on a wide variety of products.

**NEW PRODUCT NEWS**—Hundreds of new products are introduced each month. You'll get the facts on not only what the new product is, but also where to get it, basic prices and current delivery.

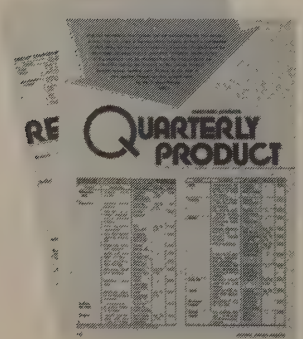
**EP/IC UPDATE**—Exclusive in ELECTRONIC PRODUCTS. A monthly report on *everything* that's new in the fast-moving world of integrated circuits.



**QUARTERLY PRODUCT REVIEW**—Another exclusive in ELECTRONIC PRODUCTS. A complete report of *every* new electronic product introduced in the previous quarter. This feature is in the January, April, July and October issues.

**QUARTERLY PRODUCT PLANNING DIRECTORY**—A compilation of the latest catalogs of a wide variety of electronic products and systems.

**OUTLOOK**—Important industry news affecting electronic products and systems.



**COMPONENT CAPERS**—A humorous look at the strange and wonderful world of electronics.

**MINI-GLOSSARIES,** Quizzes and more—Each and every month for over twenty years the readers of ELECTRONIC PRODUCTS learn something new about the products they work with and specify.

# GUARDIAN® SOLENOIDS

**NEW UNI-GUARD® II LEADS**

Lead wire adapters specifically designed for use with Guardian's new Uni-Guard® II coil construction which features QC lug termination. Each of these leads has a minimum overall length of 6" and is made of 22 gauge wire (U/L style 1015 with temperature rating of 105°). Termination at one end is in a choice of .187" or .110" insulated female QC lug which mates with corresponding lug on the solenoid. Wire at opposite end is stripped ¼" minimum. Two lead wire adapters are required for easy conversion of each Uni-Guard® II solenoid from QC to lead termination.

| Guardian No. | Lug Size | Package of 50 | Package of 100 |
|---|---|---|---|
| LW-22-187 | .187" | $4.20 | $8.38 |
| LW-22-110 | .110" | 4.20 | 8.38 |

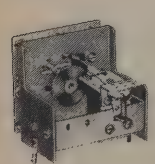
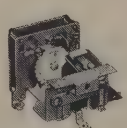
## CONTINUOUS ROTATION



L 3 7/16"/ W 3 3/8"/ H 3 1/32"



L 3 3/8"/ W 2 15/16"/ H 2 3/16"

The circuit selection wiper on Continuous Rotation Steppers moves in one direction only, upon energization of the step coil. This type of stepper is available in standard 24 point (MC) or 40 point (PC). The 24 bridging contact deck is evenly divisible by eight possible sequences. The PC stepper features self-stepping speeds up to 30 steps per second and mechanical life expectancy of over 4,000,000 steps.

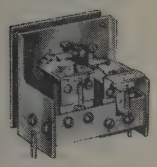
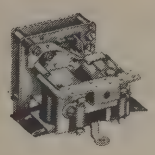
## ELECTRICAL RESET



L 3⅜" / W 3⅝₆" / H 2⅜₆"



L 3¼₆" / W 3⅜" / H 3½₂"

**Type MER.** A direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Assures positive reset on as short a pulse as one-hundredth of a second. By interconnecting two or more steppers, count can be increased to any desired total, counting by tens, or any convenient multiple. Will control a sequence of operation and then automatically reset to starting position. The circuit selecting wiper on Electrical Reset Steppers can be reset to zero or home from any desired position, by energization of the reset magnet.

**Type PER.** Operation same as MER but with up to 52 active contacts.

| Guardian No. | Watts | Volt Amperes | No. of Points | No. of Active Contacts | Max. Steps per Second | Shipping Weight Ounces | Net ea. 1-24 |

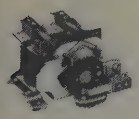
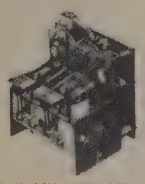
## ADD AND SUBTRACT



L 3⅛" / W 3¼" / H 1¹⁵⁄₁₆"



L 3⅜₆" / W 3½" / H 3½"

Add and subtract steppers are basically continuous rotation types with the added feature of being able to reverse the movement of the selecting wiper when required.

**Type MAS.** A midget add and subtract stepper incorporating a cam actuated switch which operates at zero position. Used primarily to indicate a zero balance between pulses supplied to the "add" coil as compared to pulses received by the "subtract" coil.

**Type PAS.** Bi-directional steppers whereby the selector wiper moves either direction depending on which of the coils is energized. Supplied with .058" dia. AMP quick-connect terminals arranged in circle on deck, and also includes a form "C" cam switch.

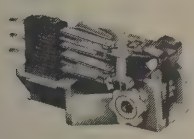
## SERIES 660 - 665 SEQUENCE



L 3¹⁄₁₆" / W 2¼" Max. / H 2³⁄₁₆" Max.

Intended to perform switching operations in a repetitive transfer sequence. Each electrical impulse moves the switch contacts to the opposite position in the sequence. Contacts rated up to 15 amps at 120V, 60 Hz, non-inductive load. Shipping weight, 8 oz. Mounting: 4 holes 8-32 (NC-2B).

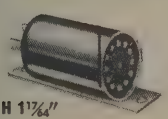
## ROTOMITE STEPPER SERIES 705



L 3" / D 1¹³⁄₆₄" / H 1¹⁷⁄₆₄"

An entirely new concept in stepper design, the Guardian "Rotomite" is first with maximum stepper control in minimum space. Offering high contact rating of 3 amps resistive, 1 amp inductive (50% PF). Featuring continuous duty operation with life well in excess of one million steps, the completely enclosed Rotomite is geared for continuous rotation of 12 positions.

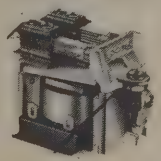
## SERIES 840LS - 845LS ON/OFF RELAY

**SINGLE COIL IMPULSE OPERATED MECHANICAL LATCHING RELAY**



L 2¼" / W ³⁵⁄₆₄" / H 2³⁄₁₆" Max.

Compact AC or DC Latching Relay for positive on/off SPDT, DPDT or 4PDT contact combinations. Impulse as short as 20 MS energizes coil to reverse position of switches. Holds last position of switch with coil de-energized. Contacts rated for 10 amps at 120 VAC, 60 Hz non-inductive. Power requirement: 22 volt-amperes. Solder lug terminals for coils and contacts. Shipping weight, 5.2 oz. Mounting: Single mounting hole tapped 8-32 (NC-2B).

| 845LS-4C-24D | 24DC | 4PDT | 13.44 |

NOTES: All steppers except Series 705 are intermittent duty. All are direct drive units with switching operation completed upon energization. All contact points are rated 1½ amps resistive at 120V, 60 Hz. Coil Voltage* are 120 VAC, 60 Hz and 24 DC.

* Steppers will operate satisfactorily at 15% below or 10% above rated voltage. † Includes Zero (0) position. ¶ Listings are for stepping coil and reset coil, respectively. ‡ Zero (0) position switch only.

## SERIES 220

**HEAVY DUTY INDUSTRIAL AC RELAY — 20 AMPERE**

L 3" / W 1¾" / H 1⅞"

This rugged unit makes and breaks up to 20 amps, at 240 volts. Armature is equipped with phenolic contact mounting block carrying ¾" dual contacts. Phenolic is tested at 1500 volts breakdown to ground. Contacts are silver alloy. Relay is available in dual SPST, normally open contact combination only. Contact rating 20 amps at 60 Hz, 240 VAC non-inductive load. Mounting: Mounting holes — clearance for 8-32 with 2³⁄₃₂" centers Shipping weight, 5.5 oz.

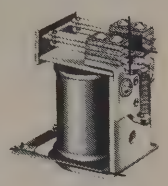
## SERIES 625 PLATE CIRCUIT DC RELAY — 10 AMPERE



L 2"/W 1⅛"/H 2⅛"

Adaptable to voltage operation as well as sensitive plate circuit control installations. Coil impregnated for reliability and longer life. Average power requirement, 0.2 watt. Contacts, fine silver. Contact ratings, 10 amps. Mounting: One 8-32 (NC-2) center hole. Shipping weight, 5.5 oz.

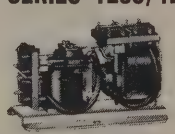
## INTERLOCK RELAYS
## SERIES 1200/1200 / SERIES 1200/1200UB



L 2⅞"/W 1¾"/H 1⅞"

Two interlocking AC relays. Used to maintain circuits continuously without coil power consumption. Units are electrically pulse operated with mechanical hold and electrical release. Contacts rated for 10 amps, at 60 Hz, 120 VAC, non-inductive load. Coil resistance is 1,100 ohms. Shipping weight, 5.5 oz.

# GUARDIAN® OPEN RELAYS

## SERIES 2600U - 2605U

**25 AMPERE POWER RELAY / REPLACES SERIES 2100-2105 AND SERIES 2300-2305**

Power relays with double pole double throw contacts rated at 25 amps. Inverted coil construction protects armature and contacts from inadvertent mechanical damage or electrical shorting. Series 2600U-DPDT AC coils are rated for continuous duty. Operating power requirements are 9 volt amps AC and 3.6 watts DC. Series 2600U and 2605U have easily accessible screw type terminals as pictured; also available are ¼ AMP QC as pictured on Series 2620U and 2625U. (Purchase 2600-QC terminal kit for easy "do-it-yourself" conversion.) "Press to Test" armature lever makes for convenient manual circuit testing. Recessed SPDT auxiliary switch as illustrated is not included but is simple to mount and may be purchased separately if needed; auxiliary switch has solder lug blade tails and is rated for 10 amp operation. These new 25 amp power relays are very compact with a shipping weight of only 8 oz. For mounting there are two .196" diameter holes in the base; these are located on 1⅞" centers.

## SERIES 2620U - 2625U

**25 AMPERE POWER RELAY / REPLACES SERIES 2110-2115**

Compatible line of power relays with double pole single throw contacts (normally open). Same inverted coil construction as for 2600U and 2605U. Important note: Series 2620U and 2625U are manufactured with the easily accessible screw type terminals as pictured on Series 2600U and 2605U. The ¼ AMP QC terminals pictured here are available in the 2600U-QC terminal kit for easy "do-it-yourself" installation. Same "Press to Test" armature lever as for 2600U and 2605U. Auxiliary switch may be added if desired. Overall dimensions, shipping weight and mounting provisions are identical to the compatible DPDT units of the 2600U and 2605U Series.

(5 amps only)

Recognized under the Component Program of Underwriters' Laboratories, Inc.

## SERIES 1220 AC - 1225 DC

Series use the terminal panel itself as the male plug. "UNI-GUARD" continuous-loop moving blades eliminates soldered connections. Cover snap-locks in place with flush fit that guards against shorting. Universal terminals function as solder-lug, .110" quick connect, or socket plug-in. Mounting bracket for above chassis installation included with each relay. Contacts will safely switch 10 amps at 120 VAC non-inductive in most applications and are U/L approved at 7 amps.

## SERIES 1220M AC - 1225M DC MANUAL RESET RELAY

Series 1220 AC and 1225 DC are obtainable off-the-shelf in a manual reset version. Unit is built to meet U/L requirements. Double pole double throw contacts transfer when coil is energized, locking in the transferred position without further coil energy. Lock is released and contacts re-transfer only when manual reset button is pressed.

## SERIES 1565 RELAY — MINIATURE 3 AMP RELAYS IN CHOICE OF SPDT OR SPST-NO

Terminals mount directly to PC board. Mechanical life: 20,000,000 operations. Electrical life: 200,000 operations at rated load. Molded nylon dust cover. Rated 3 amp at 250V, 60 Hz or 30 VDC resistive. Silver cadmium oxide contacts. Weight: 12 grams.

## SERIES 1575 RELAY — OUR LOWEST COST MINIATURE 3 AMP ENCLOSED RELAY, SPDT, DC

Terminals mount directly to PC board. Cover and base are sealed together. Expected mechanical life: 1 million operations. Electrical life: 100,000 operations minimum at rated load. Contacts are silver cadmium oxide flashed with gold. Rating is 3 amps at 30 VDC or 120 VAC resistive. Weight: 14 grams.

## MINI DIP SWITCH — MINI DIP SWITCHES FOR PC BOARDS IN 4-POLE, 6-POLE AND 8-POLE

Mount directly to PC boards to switch circuits. Adaptable to any kind of PC board because of same package dimensions as most IC's. Gold plated terminals and heat resistant plastic material for molded parts. Rated 5 VDC, 100 mA without switching; 5 VDC, 100 mA with switching; 25 VDC, 25 mA with switching. Contact resistance less than 50M at 2 VDC, 10 mA. Electrical life: More than 10,000 switching.

# GUARDIAN®/CALIFORNIA SOLID STATE CONTROLS

On the pages that follow are solid state controls produced by Guardian Electric Manufacturing Company of California, Inc., 4030 West Spencer Street, Torrance, California 90503. Like all Guardian products, these are immediately available from any franchised Guardian Distributor. For additional data, call your Guardian Distributor . . . or Guardian/California at (213) 542-8651.

## PROTECTIVE SENSORS

3-phase (IR-AV2), Close Differential (IR-VS3), Over-Voltage (IR-VS1), Under-Voltage (IR-VS2), 4 wire Phase Sequence (IR-PR1), Adjustable Frequency (IR-FS1) and AC Current Sensors (CS1 Sensor with CT1 XFormer). The relay is 3PDT 10 amps resistive with 24 VDC, 24 VAC or 120 VAC, available. Mounting is by socket, chassis mount or directly into a printed circuit (110). Temperature range is from 0°C to +50°C. Life is 100,000 operations minimum and protection for transient voltage is to 600 volts for the 3 phase model, 2500 volts for all others.

## TMP AND TMT SERIES TIMING MODULES

Series TMP/TMT Time Delay Modules are available in "on operate" and "on release" configurations with two time delays and three standard input voltage ranges. Time delay is externally adjustable within two ranges from ½ to 100 seconds and 100 to 300 seconds. Repeatability is ±1% under normal conditions. Life expectancy is one million cycles. Standard input voltages are 24 VAC, 120 VAC and 24 VDC, TMP is terminated in an octal plug for quick mounting and remote control of relay and other switching devices. The TMT "Flat Pack" package. was designed to accept Guardian relays mounted to it, or to allow stacking of modules for extension of timing periods, or direct installation into a printed circuit board.

Recognized under the Component Program of Underwriters' Laboratories, Inc.

## TAP SERIES TIME DELAY

Hybrid time delay incorporating a solid state control circuit with relay contact output. Delay on operate. Contacts transfer at conclusion of timing period initiated upon application of control voltage. Delay adjustment controlled by knob located on top of relay housing. Enclosed in tubular plastic housing terminating in a radio style octal plug. Output contacts rated 5 amp resistive at 120 VAC. Standard operating temperature range is 0° to to 55°C.

## VOLTAGE LEVEL DETECTORS

Voltage Level Detector molded modules incorporate circuits comprised of silicon semiconductor devices to form a peak detecting voltage differential amplifier, signal amplifier and a solid state output switch suitable for driving a number of Guardian relays. The unit's sense level is adjustable (either fixed or variable) over ranges of 85-135 VAC, 50-60 Hz, 20-30 VAC, 50-60 Hz, 20-30 VDC, 180-250 VAC, 50-60 Hz by external resistance. This broad adjustment range permits operation as either an under or over level detector. Transient suppressed, they will withstand 2500V peak (short duration) without damage or malfunction. On DC units, transient protection is 600 volts.

## HSSR SERIES HYBRID SOLID STATE RELAY

Combines best characteristics of electromechanical and solid state to achieve isolated control with the long life of a triac output switch. Housed in rugged nylon cover with isolated metal mounting base with .250" QC terminals. Completely encapsulated. AC reactive load switching takes place regardless of power factor and arcing of the back EMF is eliminated in inductive loads as the triac turns off at zero current.

## SSRT SERIES SOLID STATE TIME DELAY RELAY

Housed in a rugged nylon cover with isolated metal mounting base. Mounts easily and terminates in .250" QC terminals. Control input is logic levels compatible or 24 VDC. Optically coupled for sensitivity and high isolation (1500 VAC min.), this relay features a line synchronized triac output which eliminates arcing and reduces RFI and EMI to a minimum. The synchronous feature reduces in-rush current by as much as 60%, greatly increasing life of tungsten lamps. AC reactive load switching takes place regardless of power factor and arcing of the back EMF is eliminated on inductive loads because the triac turns off at zero current.

## SSR SERIES SOLID STATE TIME DELAY RELAY

Combines a time delayed DC input stage optically coupled into a line synchronized triac output. Housed in rugged nylon cover with isolated metal base. Mounts easily and terminates in .250" QC terminals. Time delay is adjustable by external resistance. Virtually noise immune and premature timeouts are eliminated. Both EMI and RFI reduced to a minimum while giving extra life to tungsten lamp loads. AC reactive loads are switched regardless of power factor. Arcing of the back EMI eliminated because the triac turns off at zero current.

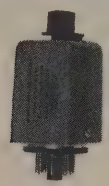
## BD2 AND BD4 SERIES TIME DELAY RELAYS

The BD2 Series are delay on operate and the BD3 Series is the popular 3 wire delay on release. They terminate in octal plugs with 8 and 11 pins respectively. Three standard timing ranges are offered in both series, covering 1-100 seconds in AC and DC input ranges. The output rating is a full 5 amp resistive and 2PDT is the standard configuration.



| Guardian No. | Voltage | Delay Range (Sec.) | Net ea. |

BD2 = Delay on operate; BD3 = Delay on release

## MET SERIES—TIME DELAY ON OPERATE OR ON RELEASE

Designed for on-operate and on-release, with a range of .5 to 300 seconds. Time Delays provide a DPDT relay output of 10 amp resistive, 120 VAC, 50-60 Hz and operate on inputs of 120 VAC, 50-60 Hz, 24 VDC, 50-60 Hz or 24 VDC, polarity protected. Time Delays feature accuracy of ±10% of nominal setting over voltage and temperature range, repeatability to 1% within fixed conditions, a single turn potentiometer and time delays of .5 to 15, .5 to 100 and 100 to 300 seconds over a temperature of 0° to 55°C.

L 2.90"/W 2.40"
Max./H 1.90" Max.

| Guardian No. | Volts | Delay Range (Sec.) | Net ea. |
|---|---|---|---|
| MET-0-100-24A | 24VAC | .5 to 100 | $25.67 |
| MET-0-300-24A | 24VAC | 100 to 300 | 26.76 |
| MET-0-015-120A | 120VAC | .5 to 15 | 25.00 |
| MET-0-100-120A | 120VAC | .5 to 100 | 25.67 |
| MET-0-300-120A | 120VAC | 100 to 300 | 26.76 |
| MET-0-100-240A | 240AC | .5 to 100 | 49.39 |
| MET-0-015-24D | 24VDC | .5 to 15 | 24.60 |
| MET-0-100-24D | 24VDC | .5 to 100 | 25.08 |
| MET-0-300-24D | 24VDC | 100 to 300 | 25.98 |
| MET-R-100-24A | 24VAC | .5 to 300 | 34.63 |
| MET-R-300-24A | 24VAC | 100 to 300 | 35.56 |
| MET-R-015-120A | 120VAC | .5 to 15 | 33.99 |
| MET-R-100-120A | 120VAC | .5 to 100 | 34.63 |
| MET-R-300-120A | 120VAC | 100 to 300 | 35.56 |
| MET-R-015-24D | 24VDC | .5 to 15 | 33.54 |
| MET-R-100-24D | 24VDC | .5 to 100 | 34.03 |
| MET-R-300-24D | 24VDC | 100 to 300 | 34.94 |

O in part number indicates delay on operate, R delay on release.

## TAF, TAS, THF AND THS SERIES TIME DELAY RELAYS

Hybrid time delays incorporating a solid state control circuit with relay contact output. Delay on operate. Contacts transfer at conclusion of timing period initiated upon application of control voltage. Time delay (on adjustable models) is set by external resistance connected across plug pins #3 and #4. Timer enclosed in tubular plastic housing terminating in radio style octal plug. Output contacts rated 5 amp resistive to 120 VAC.

| Guardian No. | Input Voltage | Time Delay (Sec.) | Net ea. |
|---|---|---|---|
| TAF-01 | 24VDC/120VAC | 1 | $15.62 |
| TAF-02 | 24VDC/120VAC | 2 | 15.62 |
| TAF-03 | 24VDC/120VAC | 3 | 15.62 |
| TAF-04 | 24VDC/120VAC | 4 | 15.62 |
| TAF-05 | 24VDC/120VAC | 5 | 15.62 |
| TAF-10 | 24VDC/120VAC | 10 | 15.62 |
| TAF-15 | 24VDC/120VAC | 15 | 15.62 |
| TAF-20 | 24VDC/120VAC | 20 | 15.62 |
| TAS-10 | 24VDC/120VAC | 1-10 | 15.62 |
| TAS-50 | 24VDC/120VAC | 5-50 | 16.40 |
| TAS-100 | 24VDC/120VAC | 10-100 | 16.40 |
| THF-01 | 24VDC/120VAC | 1 | 14.36 |
| THF-02 | 24VDC/120VAC | 2 | 14.36 |
| THF-03 | 24VDC/120VAC | 3 | 14.36 |
| THF-05 | 24VDC/120VAC | 5 | 14.36 |
| THF-10 | 24VDC/120VAC | 10 | 14.36 |
| THF-15 | 24VDC/120VAC | 15 | 14.36 |
| THF-20 | 24VDC/120VAC | 20 | 14.36 |
| THS-10 | 24VDC/120VAC | 1-10 | 14.36 |
| THS-50 | 24VDC/120VAC | 5-50 | 15.16 |
| THS-100 | 24VDC/120VAC | 10-100 | 15.16 |

Series TAF and THF are fixed time delays.
Series TAS and THS are externally adjustable thru header.
Series TAF and TAS repeatability = ±10%.
Series THF and THS repeatability = ±30% depending on recycle time.

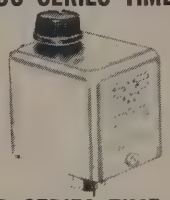
## TAE AND THE SERIES TIME DELAY RELAYS

Hybrid time delays incorporating a solid state control circuit with relay contact output. Delay on operate. Contacts transfer at conclusion of timing period initiated upon application of control voltage. Time delay adjusted by external resistance connected across screw terminals on top of relay housing. Timer enclosed in tubular plastic housing, terminating in a radio style octal plug.

| Guardian No. | Input Voltage | Time Delay (Sec.) | Net ea. |
|---|---|---|---|
| TAE-10 | 24VDC/120VAC | 1-10 | $17.12 |
| TAE-50 | 24VDC/120VAC | 5-50 | 17.92 |
| TAE-100 | 24VDC/120VAC | 10-100 | 17.92 |
| THE-10 | 24VDC/120VAC | 1-10 | 15.38 |
| THE-50 | 24VDC/120VAC | 5-50 | 16.18 |
| THE-100 | 24VDC/120VAC | 10-100 | 16.18 |

Series TAE repeatability = ±10%.
Series THE repeatability = ±30% depending on recycle time.

## TDO SERIES TIME DELAY



Contacts rated at 5 amps, DPDT, 120 VAC with adjustable delay of 0.5 to 30 seconds on attract with a ten turn potentiometer. Repeatability is within 5% after a line interruption of 100 milliseconds. Standard unit available is 120 VAC.

| Guardian No. | Volts | Delay Range (Sec.) | Net ea. |
|---|---|---|---|
| TDO-62C30-120A | 120VAC | 5 to 30 | $29.27 |

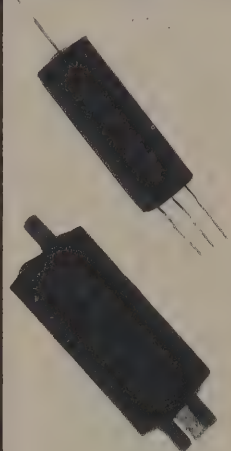
## TD SERIES TIME DELAY

Adjustable delays from 1 to 180 seconds. 15 turn potentiometer provides high adjustment resolution. Accurate to 5% of nominal setting over complete temp. and voltage range. Repeatability, 2% after line interruption of 100 MS. Delays on attract. 9PDT contacts rated at 10 amps resistive.

| Guardian No. | Volts | Delay Range (Sec.) | Net ea. |
|---|---|---|---|
| TD-33C15-24D | 24VDC | 1 to 15 | $27.48 |
| TD-33C60-24D | 24VDC | 10 to 60 | 28.60 |
| TD-33C180-24D | 24VDC | 50 to 180 | 36.43 |
| TD-63C15-120A | 120VAC | 1 to 15 | 33.72 |
| TD-63C60-120A | 120VAC | 10 to 60 | 34.13 |
| TD-63C180-120A | 120VAC | 50 to 180, | 41.84 |

## SERIES 6425 AND 6435 INLINE TIME DELAY

### REPLACES SERIES GU INLINE TIME DELAY



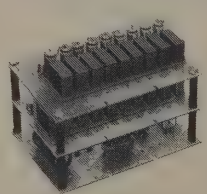
Totally solid state Inline Time Delay. Available in low (12 to 48 VDC) and high (90 to 130 VDC) voltage versions in your choice of three externally-adjustable time ranges: .1 to 10 seconds, 5 to 120 seconds and 10 to 300 seconds. Accuracy and repeatability after first time out: Accuracy, ±10% of setting for combined variations of ambient temperature and power supply regulation: Repeatability, ±2% for fixed line input. Operating temperature range of −20°C to +55°C. Minimum operations $10^7$. Termination in your choice of 3/16" quick connect or solid lead. Delay on operate. Adjustment by 1 meg. ohm potentiometer.

| Guardian No. | Volts | Time Range (Sec.) | Net ea. |
|---|---|---|---|
| 6425-2L-10 | 12 to 48VDC | .1 to 10 | $10.00 |
| 6435-2L-10 | 12 to 48VDC | .1 to 10 | 10.10 |
| 6424-2H-10 | 90 to 130VDC | .1 to 10 | 10.00 |
| 6435-2H-10 | 90 to 130VDC | .1 to 10 | 10.10 |
| 6425-2L-120 | 12 to 48VDC | 5 to 120 | 10.10 |
| 6435-2L-120 | 12 to 48VDC | 5 to 120 | 10.19 |
| 6425-2H-120 | 90 to 130VDC | 5 to 120 | 10.10 |
| 6435-2H-120 | 90 to 130VDC | 5 to 120 | 10.19 |
| 6425-2L-300 | 12 to 48VDC | 10 to 300 | 11.85 |
| 6435-2L-300 | 12 to 48VDC | 10 to 300 | 12.52 |
| 6425-2H-300 | 90 to 130VDC | 10 to 300 | 11.85 |
| 6435-2H-300 | 90 to 130VDC | 10 to 300 | 12.52 |

6425 part number = solid lead termination.
6435 part number = 3/16" QC termination.

## SLS SOLID STATE LOGIC STEPPER

The SLS 100 Series Solid State Steppers are the only power solid state steppers to accept either high level or logic level inputs with high noise immunity for industrial applications. The output of each step is a 120 VAC 2½ amp switch. Units can be cascaded or paralleled to perform complex switching and control functions. Guardian Steppers are built for operation on input power of 120 VAC, 50-60 Hz or 400 Hz and 24 VDC. All solid state construction offers the advantages of mechanical noise-free operation.



| Guardian No. | Volts | Steps | Net ea. |
|---|---|---|---|
| SLS-110-2A111* | 120VAC | 10 | $143.62 |
| SLS-110-1A211* | 24VDC | 10 | 123.97 |
| SLS-120-2A111* | 120VAC | 20 | 249.04 |
| SLS-120-1A211* | 24VDC | 20 | 208.43 |
| SLS-110-25111† | 120VAC | 10 | 151.80 |
| SLS-110-15211† | 24VDC | 10 | 132.15 |
| SLS-120-25111† | 120VAC | 20 | 257.30 |
| SLS-120-15211† | 24VDC | 20 | 218.37 |
| SLS Connector Kit | | | 1.10 |

* Step advance by either mechanical switch closure or DC Pulse.
† Self-stepping.

# UNITED PRICING REPORTS

## the single source that speeds up invoicing, pricing, quoting, purchasing and estimating

Electronic component prices change so fast, you'd need a team of people just to keep up.

United Pricing Reports is the better way. When you subscribe to Pricing Reports you receive 1500 pricing sheets (3000 pages) of the latest prices, as of the date we ship them to you.

This gives you, in a single source, up-to-the minute selling prices on more than 500,000 electronic components.

United Pricing Reports gives you accurate resale prices at the exact moment you need them. Not hours or days later. So it helps you eliminate frantic phone calls, letter writing and catalog scanning to check on prices when you write an invoice or type a purchase order.

## Twice weekly price updates.

One week after you receive your Pricing Reports source book (1500 pricing sheets) you begin receiving twice weekly price updates. You simply take these new price pages and replace the now obsolete pages with them.

The whole process is simple. All information is organized alphabetically by manufacturer. And each manufacturer's price schedule is listed by part number in numerical/alphabetical sequence.

One more thing. When we promise twice weekly updates, we deliver. 52 weeks a year, consistently. Not monthly or every other month. We have a tradition of delivery on our promises, and we're certainly not going to stop now.

# OPTO-ISOLATED SOLID-STATE RELAYS 2 to 40 AMPS

Solid-state relays ready for your circuit design. PCB or surface mounted units designed to switch inductive, capacitive or resistive loads up to 40 amps.

**Special features:**

- Optically coupled
- Zero voltage synchronous switching
- 1500 VAC isolation
- 2 to 40 ampere rating
- PCB mount or lug terminals
- Epoxy encapsulation
- 120 or 240 VAC switching capability.

# HYBRID SOLID-STATE RELAYS 1½ to 6 amps

PCB or surface mounted units capable of controlling inductive, capacitive, high-inrush or resistive loads.

**Special features:**

- 1500 VAC isolation
- On/off switching
- 1½ — 6 amps rating
- PCB mounting or lug terminals
- Epoxy encapsulation
- 120 or 240 VAC switching capability

Switching forms. Others available, consult factory.

### 400 SERIES — MINIATURE — HE (1" x .100" or 1" x .150" Grid)

Industry standard open frame package with the widest range of switches and options in the industry. From economy version to mercury wet, to hi-voltage, to power switch, one package will handle all of your switching needs. Up to 5 form A or 4 form C, with choice of .100" or .150" pin spacing. Options include: plastic or drawn metal cover, special schematics and a wide variety of switches.

### 400 SERIES — STANDARD SIZE — HS (2.4" x .200" Grid)

This long established standard size relay on 2.4" centers, built for large switching loads, higher breakdown voltage. Available in a choice of schematics, range of switch values from 15W to 100W, 500V to 1500V, 1 amp to 3 amp, with and without metal cover.

### 400 SERIES — MICRO-MINIATURE — HX (.700" x .100" Grid)

Miniature high density package, standard magnetic shield, choice of 5 to 12 volt input, 1 or 2 form A, with or without electrostatic shield.

| Relay Part Number | Coil Voltage | Coil Resistance | Switch Type | Form | Switch Voltage | Switch Current | Switch Rating | Min. Voltage Hold-Off | IR | CR |

All above available in 12, 24 volt input, with diode, with electrostatic shield.

### 800 SERIES — DIL — Dual in-line (1" x .100" Grid)

An alternate design to DIP, allows for greater package flexibility than DIP at a cost saving to the user. Available in 1A, 2A, 1B, 1C, 2C, in various switches, i.e. Mercury Wet, Mercury Wet all position and High Voltage hold-off (600 VDC across contacts).

| Relay Part Number | Coil Voltage [V] | Coil Resistance [Ω] (±10%) | Operate Current [A] | Must Operate Voltage V Max. | Must Release Voltage V Min. | Operate Time [ms] | Release Time* [ms] | Switch Type | Contact Form | Switch Voltage Max. # DESIGN ENGINEERS SOLENOID KIT

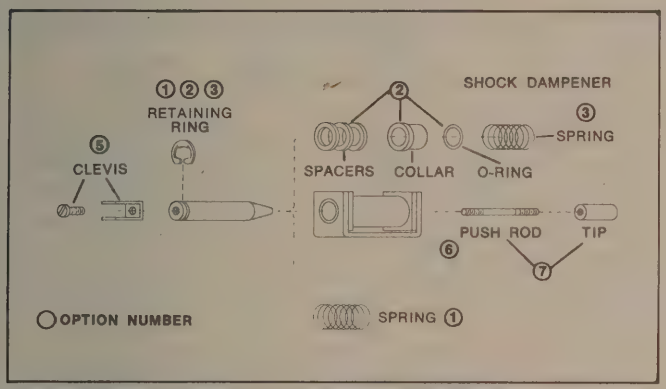
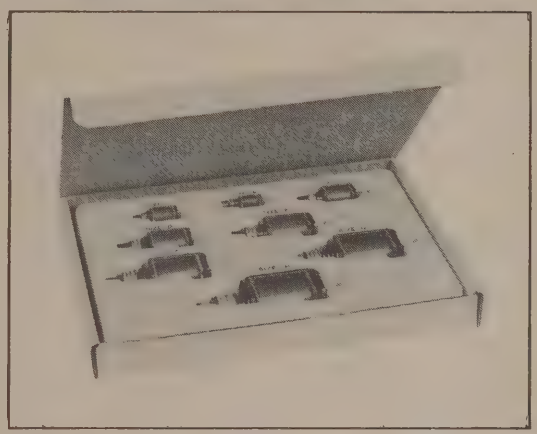
**A MAGNETEC INNOVATION . . .** A unique C-frame Solenoid Kit which the design engineer will find indispensable. The **192 combinations** of Series 'S' Solenoids included in the kit allow the engineer to go from initial design concept to final specification by simply tailoring his own . . . right on the spot! The Kit includes:

- 8 solenoid sizes
- 6 linkage options
- 4 action options
- 24VDC coils
- force range of 8 oz. to 14 lbs.
- all options assembled



**EXPLODED VIEW OF TYPICAL SOLENOID IN KIT**

**MODEL SK-2**
**A $48.00 VALUE FOR $24.95**



**REFER TO SERIES "S" C-FRAME SOLENOIDS FOR PERFORMANCE DATA**

## ABOUT MAGNETEC

Magnetec Corporation specializes in the design and manufacture of D.C. linear solenoids. Available styles include C-frame, D-frame, and tubulars. All styles are available with already designed numerous additional features, including spring returns, shock dampeners, push rods with or without plastic tips, and various clevis configurations. Coil windings may be tailored to the application for optimized solenoid performance. Merely provide us with the actual duty cycle, your force and stroke requirements, and your preferred coil voltage.

## CUSTOM SOLENOIDS

Solenoid technology has become highly specialized and we take pride in our engineering capability. Our custom designed solenoids are used in applications, including dot matrix impact printers, camera shutter actuators, electrical shut-off devices in diesel fuel injection pumps for automobiles, valves for adaptive braking systems for trucks, and ground fault interrupters. We are serving industries, including data communications, business equipment, photography, appliance, safety equipment, medical equipment, audio equipment, banking and vending equipment, aircraft, instrumentation, and automotive.

Whether your need is for an industry standard solenoid or a customized solenoid, our applications engineers would be pleased to offer their assistance and make their technical recommendations. Our detailed catalog literature is available upon request.

## GENERAL SPECIFICATIONS

### CONTACT CAPABILITIES

**RATING**
10,000,000 operations at low level. 1,000,000 operations at 0.5 amp, 28V d-c resistive load. 100,000 operations at 1.0 amp, 28V d-c resistive load.

**CONTACT RESISTANCE**
0.1 ohm maximum before life (measured ⅛" from header). 0.15 ohm maximum after life at maximum rated current (measured ⅛" from header).

**CONTACT BOUNCE**
1.5 milliseconds maximum

**OVERLOAD**
2 amps at 28V d-c for 100 operations minimum

**INSULATION RESISTANCE**
10,000 megohms minimum between mutually insulated terminals

**ENCLOSURE**
Hermetically sealed. All welded.

### ENVIRONMENTAL CHARACTERISTICS

**TEMPERATURE RANGE**
— 65°C to + 125°C. (Higher temperature ratings on special order)

**VIBRATION**
.06" DA or 30G, 10-3000 cps.

**SHOCK**
75 G's

### MILITARY SPECIFICATIONS

All Hi-G MA and MS Series relays are manufactured in accordance with Military Specification MIL-R-39016 and its applicable detail specification. Level "L" or "M" Qualification available.

HI-G CO., INC. Relay Division, 580 Spring Street, Windsor Locks, Conn. 06096 / Phone (203) 623-2481 / TWX: 710-420-0592

**Qualified**

**Sensitivity:**
130 milliwatts

**Operate Time:**
2.5 milliseconds maximum at nom. coil voltage over temperature range.

**Release Time:**
1.5 milliseconds maximum at nom. coil voltage over temperature range.
With diode suppression 4.0 millisec.

**Dielectric Strength:**
500V RMS 60 cycles at sea level
125V RMS 60 cycles at 70,000 feet

**Weight:**
0.07 ounce with leads trimmed to ⅛", add 0.02 ounce for leads

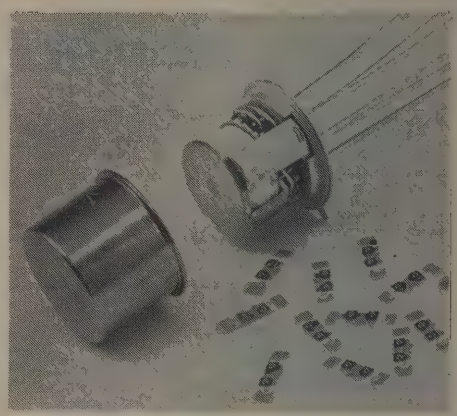
# TO5 HYBRID RELAYS

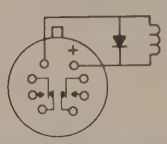
## GENERAL SPECIFICATIONS

**RATING:** 10,000,000 operations at low level. 1,000,000 operations at 0.5 amp, 28V d-c resistive load. 100,000 operations at 1.0 amp, 28V d-c resistive load.
**CONTACT RESISTANCE:** 0.1 ohm maximum before life (measured ⅛" from header). 0.2 ohm maximum after life at maximum rated current (measured ⅛" from header).
**CONTACT BOUNCE:** 1.5 milliseconds maximum.
**OVERLOAD:** 2 amps at 28V d-c for 100 operations minimum.
**INSULATION RESISTANCE:** 10,000 megohms minimum between mutually insulated terminals.
**ENCLOSURE:** Hermetically sealed. All welded.
**TEMPERATURE RANGE:** −65°C to +125°C.
**VIBRATION:** .06" DA or 30G, 10-3000 cps.
**SHOCK:** 80G's for 11 milliseconds.
**DIODE CHARACTERISTICS 25°C:** PIV 100V min.
**MAXIMUM COIL TRANSIENT:**
Transistor Coil Drive: 1.0V Suppression: 2.0V
**TRANSISTOR CHARACTERISTICS 25°C:**
Emitter-Base Voltage: 6V max.
Collector-Base Breakdown Voltage: 80V min. @ 100 μa.



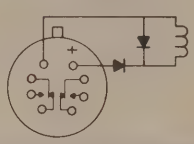
### SUPPRESSION
Each of Hi-G's relays are available with an integrated coil suppression diode to provide inhibition of the inductive arc voltage produced by the coil.

TYPE "D"



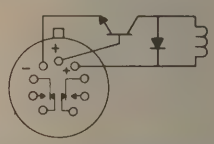
### SUPPRESSION/STEERING
The addition of a series diode to the suppressed coil circuit provides the added advantage of polarity reversal protection and the elimination of diode damage.

TYPE "DD"



### TRANSISTOR DRIVEN
The addition of an internal transistor coil drive provides increased operating sensitivity, high isolation while retaining the high level switching capability of the contacts.

TYPE "T"



## ORDERING INFORMATION

MAW D — 26

Series
D — Diode Suppression
DD — Supression/Steering
T — Transistor Driven
Coil Voltage

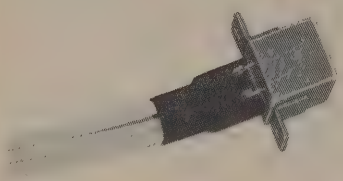
## DICE CUBE RADIO FREQUENCY RELAY — SERIES RFC PRODUCT BULLETIN 159



**Operate Power 150 mW**

| | |
|---|---|
| **Relay Type** | RFC |
| **Size** | 0.5-inch cube |
| **Contact Rating** | 200 watts RF cold switching<br>75 watts RF hot switching |
| **Maximum Weight** | 0.3 ounce (without terminations) |

Housing details on p. 3540 and 3541.

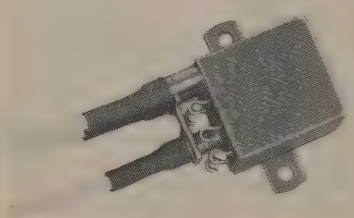
## HALF SIZE CRYSTAL-CAN RADIO FREQUENCY RELAY— SERIES RFK PRODUCT BULLETIN 156

**Operate Power 250 mW**

| | |
|---|---|
| **Relay Type** | RFK |
| **Size** | .4 x .8 x .4 inch |
| **Contact Rating** | 200 watts RF cold switching<br>75 watts RF hot switching |
| **Maximum Weight** | 0.37 ounce (without terminations) |

NOTE: Electrical characteristics & housing same as series K p. 3535.
Housing details on p. 3540 and 3541.

## CRYSTAL-CAN RADIO FREQUENCY RELAY — SERIES RFB PRODUCT BULLETIN 157

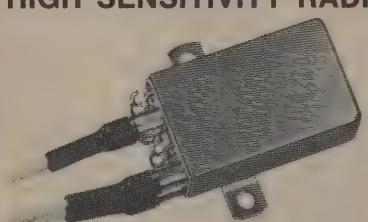


**Operate Power 250 mW**

| | |
|---|---|
| **Relay Type** | RFB |
| **Size** | .875 x .800 x .400 inch |
| **Contact Rating** | 200 watts RF cold switching<br>75 watts RF hot switching |
| **Maximum Weight** | 0.95 ounce (without terminations) |

NOTE: Electrical characteristics & housing same as series B p. 3536.
Housing details on p. 3540 and 3541.

## HIGH SENSITIVITY RADIO FREQUENCY RELAY — SERIES RFBC PRODUCT BULLETIN 158



**Operate Power 40 mW**

| | |
|---|---|
| **Relay Type** | RFBC |
| **Size** | 1.275 x .800 x .400 inch |
| **Contact Rating** | 200 watts RF cold switching<br>75 watts RF hot switching |
| **Maximum Weight** | 1.0 ounce (without terminations) |

NOTE: Electrical characteristics & housing same as series BC p. 3536.
Housing details on p. 3540 and 3541.

**ENVIRONMENTAL CHARACTERISTICS FOR STANDARD CRYSTAL CAN SERIES**

**Life:** 100,000 operations at 125°C and rated load.
**Temperature:** −65°C to +125°C, operating.
**Vibration:** 10 to 2000 Hz, 20G min.
**Shock:** 100 G
**Sealing:** Hermetic, to 80,000′

**Insulation Resistance:** 1000 megohms min., except coil-to-case at high temperature 500 megohms min.

**Dielectric Strength:** Contacts-to-case: 1000 volts rms, 60 Hz, mutually insulated terminals: 500 volts rms standard.

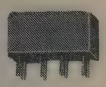
# CRYSTAL CAN RELAYS

## .150 GRID RELAY — SERIES G

Product Bulletin 95

Qualified



### CONTACT RATING

- 1 ampere resistive at 30 volts DC max.
- 0.125 amperes resistive at 115 volts RMS, 400 Hz, case grounded.
- Low level 0 to 0.1 ampere at 50 mV DC or AC.
- 2 ampere resistive at 30 volts DC max. (50,000 operations min.).

**VIBRATION:** 0.5″ DA from 5-34 Hz, 30G from 34-3000 Hz, 10$\mu$s max. contact opening.

| Voltage Code | Coil Voltage (VDC) | | DC Coil Resistance | Max. Pull-in Voltage (VDC) | | Min. Drop-out Voltage (VDC) | |
|---|---|---|---|---|---|---|---|
| | Nom. | Max. | (Ohm ±10% @ 25°C) | 25°C | 125°C | 25°C | −65°C |
| 105 | 5 | 7 | 44 | 2.4 | 3.3 | 0.26 | 0.16 |

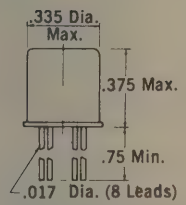
## CSW SERIES DPDT



| Relay Part No. | CSW-5 | CSW-6 | CSW-9 | CSW-12 | CSW-18 | CSW-26 |
|---|---|---|---|---|---|---|
| Coil Nominal | 5VDC | 6VDC | 9VDC | 12VDC | 18VDC | 26.5VDC |
| Coil Resistance ±10% | 100 | 200 | 400 | 850 | 1600 | 3300 |
| Pull-in (max.) VDC | 3.0 | 4.3 | 6.0 | 8.5 | 12.8 | 17.0 |

The Hi-G CA & CS Series relays are manufactured to the same exacting standards as its Military counterpart. Each relay boasts an all welded construction to afford hermeticity of seal and insurance of chamber cleanliness. This low price TO5 type relay will comply to all of your switching requirements between dry circuit and 1.0 ampere.

### GENERAL SPECIFICATIONS

**OPERATE POWER:** CA Series, 185mw; CS Series, 90mw.
**OPERATE TIME:** CA, 4.0ms; CS, 6.0ms @ nominal volt.
**RELEASE TIME:** CA, 3.0ms; CS, 3.0ms.
**DIELECTRIC STRENGTH:** 350VRMS 60 Hz.
**INSULATION RESISTANCE:** 1,000 Megohms min.
**VIBRATION:** .06" DA 10-55 Hz, 10G to 500 Hz.
**SHOCK:** 30G Mil-Std 202 Method 213.
**TEMPERATURE** −55° to +71°C.
**LIFE:** 10,000,000 ops, mechanical,
1,000,000 ops, 0.5A 28VDC
100,000 ops, 1.0A 28VDC
**WEIGHT:** CA-0.08 oz., CS-0.15 oz.

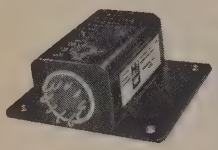
## AC AND DC VOLTAGE 1300 SERIES



### FEATURES

#### DC SENSOR — SERIES 1310

The Hi-G 1310 Series DC Voltage Sensor is essentially a voltage monitoring device operating a snap-action transistor circuit with low drift and inherent temperature compensation. This device will either open or close a circuit when a predetermined voltage is present at the input. By using a Hi-G electro-mechanical relay as the output of the voltage sensor, a positive switching action can be achieved with very close difference between pull-in and drop-out voltages.

#### AC SENSOR — SERIES 1350

The Hi-G 1350 Series AC Voltage Sensor energizes a relay when the monitored power line voltage reaches a predetermined level. This rugged unit with reliable solid state design, provides precise, repeatable operation over a wide temperature range.

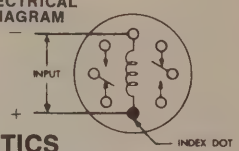
The input voltage is fed into a temperature compensated comparator circuit. When the input reaches the pre-set level, transistor amplifiers switch the output relay. This output may control any external devices, process, or warning system to protect expensive equipment.

The units for both series are potted and hermetically sealed and are designed to meet the environmental requirements of airborne applications. The following are available for both the 1310 and 1350:

### STANDARD OPTIONS

1. Solid-State Output.
2. Two Stage Sensing (Voltage Band).
3. Up to 10 Amp Relay Output.
4. 3 Phase AC Version Available.
5. Controlled Drop-out Differential.
6. Operate with Auxiliary Control Voltage.

ELECTRICAL DIAGRAM



### PART TYPE CHARACTERISTICS

| Specification | Part Number 1310 | Part Number 1350 |
|---|---|---|
| Pull-in Voltage | 5 to 150 VDC | 5 to 440 VAC |
| Smallest Increment | 0.1 Volt | 50, 60 or 400 Hz |
| Drop-out Voltage (Rel. to Pull-in) | –0, +0.5 Volts | 1.0 Volt +0, –3.0 Volts |
| Current Drain @ 25°C | 15 ma Max. | 100 ma Max. |

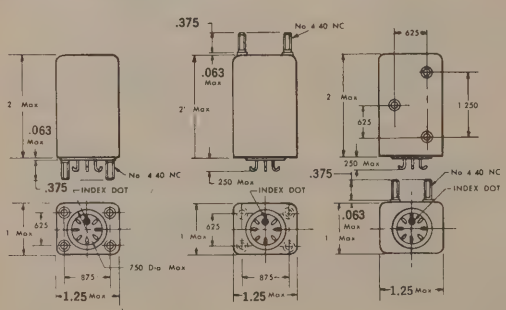
### ELECTRICAL SPECIFICATIONS

**ACCURACY:** ±2½% of set point over temperature range.
**MAXIMUM ALLOWABLE APPLIED VOLTAGE:** 150% of specified pull-in voltage.
**AUXILIARY VOTAGE:** None required.
**OPERATE AND RELEASE TIMES:** 50 milliseconds maximum over the temperature range.
**LIFE:** 100,000 operations minimum.
**CONTACT ARRANGEMENTS:** 2PDT.
**CONTACT RATING:** 2 amperes resistive at 30 volts DC; 0.3 amperes resistive at 115 volts RMS, 400 Hz.

### ENVIRONMENTAL CHARACTERISTICS

**TEMPERATURE:** –55°C to +125°C.
**VIBRATION:** 20 G's, 10 to 2000 Hz.
**SHOCK:** 50 G's, 11 ±1 milliseconds duration.
**INSULATION RESISTANCE:** 1000 megohms minimum at 500 volts DC, all terminals to case.
**DIELECTRIC STRENGTH:** 1000 volts RMS, 60 Hz at sea level, all terminals to case.
**SEALING:** Hermetic, 1.3 inches of mercury.

### MOUNTING STYLES — 1310 AND 1350



DIMENSIONS ARE IN INCHES

**HOW TO ORDER**

1310 (Type) – 2 (2PDT) – A (Mounting Style) – 24.5 (Pull-in Voltage)

## PHASE SENSOR 1400 SERIES

### TWO STANDARD TYPES

#### P TYPE FOR STATIC LOAD

With line voltages and frequency within operating limits, P-Type units will energize only when output phase are in sequence A - B - C. They will de-energize only when power is removed. The P-Type unit is best suited to applications where static loads are used and where regenerated voltage will not be present if a phase opens.

#### Q TYPE FOR MOTOR LOADS

Q-Type units perform the same function as the P-Type since they will energize only when input phases are in sequence A - B - C. In addition, the units will de-energize when any phase is disconnected or grounded provided the voltage input to the unit is below 50% of the nominal phase-to-phase voltage input. Q-Type units are suitable for motor loads where a regenerated voltage is produced.

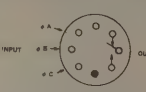
#### NO NEUTRAL CONNECTION

**Neither P- or Q-Type units require connection to neutral leg.**
For high-current applications, phase sensors are used with slave relays having heavy duty contact ratings.
For applications having special requirements as to voltage, frequency, contact arrangements, and ratings, consult the factory.

### ENVIRONMENTAL CHARACTERISTICS

**TEMPERATURE:** –55°C to +85°C.
**VIBRATION:** 200 G's, 10 to 2000 Hz.
**SHOCK:** 50 G's, 11 ±1 millisecond.
**INSULATION RESISTANCE:** 1000 megohms minimum at 500 volts DC, all terminals to case.
**DIELECTRIC STRENGTH:** 1000 volts RMS, 60 Hz, at sea level, all terminals to case.

### ELECTRICAL SPECIFICATIONS



**OPERATE TIME:** 50 milliseconds maximum.
**RELEASE TIME:** 100 milliseconds maximum.
**CONTACTS:** 1PDT.
**CONTACT RATING:** 2 amperes resistive at 30 volts DC. 0.5 ampere inductive at 30 volts DC. 0.25 ampere resistive or inductive at 115 volts, 60 or 400 Hz.

### STANDARD MODELS

| Basic Model No. | Load Type | Line to Line Voltage ±10% | Frequency ±10% | Max. Power Required | Mounting Style |
|---|---|---|---|---|---|
| 1407 | P | 115 V | 60 Hz | 4 Watts | Similar to 4 Amp. 1600 Series Catalog Type |
| 1408 | P | 115 V | 400 Hz | 4 Watts | |
| 1409 | P | 208 V | 60 Hz | 6 Watts | |
| 1410 | P | 208 V | 400 Hz | 6 Watts | |
| 1437 | Q | 115 V | 60 Hz | 6 Watts | Similar to 10 Amp. 1600 Series Catalog Type |
| 1438 | Q | 115 V | 400 Hz | 6 Watts | |
| 1439 | Q | 208 V | 60 Hz | 9 Watts | |
| 1440 | Q | 208 V | 400 Hz | 9 Watts | |

| Contact Configuration | 1, 2 Poles, double-throw | 1-, 2-, 3- and 4-pole, double throw |
| Current Drain at 25°C at 28 Volts DC | 135 ma maximum | 1-pole: 100 ma maximum;<br>2-pole: 150 ma maximum;<br>3 and 4 pole: 200 ma max. |

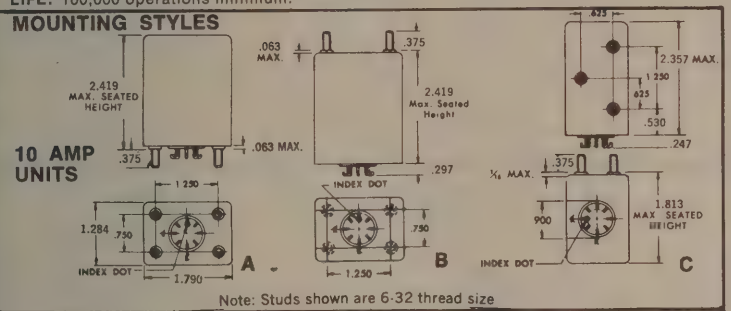
#### ELECTRICAL SPECIFICATIONS

**INPUT VOLTAGES:** Refer to above chart.
**DELAY TIMES:** 50 milliseconds to 240 seconds adjustable, 600 seconds fixed. Delays to 2 hours available.
**FUNCTION:** Delay on operate.
**TIMING TOLERANCE:** ±10% or 10 milliseconds standard. ±5% available.
**RECYCLE TIME:** 10 msec. (DC), 50 msec. (AC).
**RECOVERY TIME:** 10 msec. (DC), 50 msec. (AC).
**RESET TIME:** 10 milliseconds maximum for DC units and 40 milliseconds maximum for AC units.

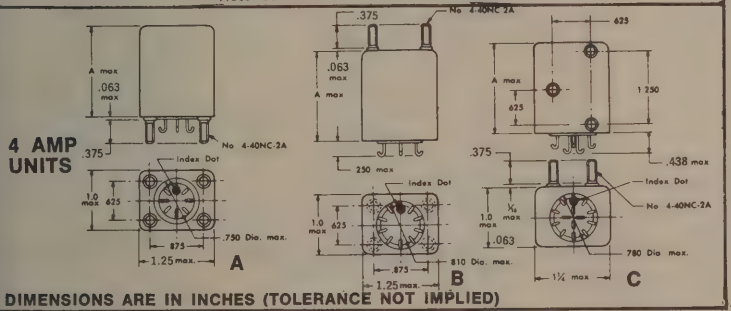
#### ENVIRONMENTAL CHARACTERISTICS

**TEMPERATURE RANGE:** −55°C to +85°C or −55°C to +125°C.
**VIBRATION:** 20 G's; 10 to 2000 Hz.
**SHOCK:** 50 G's, 11 ±1 millisecond duration.
**INSULATION RESISTANCE:** 1000 megohms at 500 volts DC, all terminals to case.
**DIELECTRIC STRENGTH:** 1000 volts RMS, 60 Hz, all terminals to case.
**SEALING:** Hermetic, 1.3 inches mercury.
**LIFE:** 100,000 operations minimum.

#### MOUNTING STYLES



Note: Studs shown are 6-32 thread size



DIMENSIONS ARE IN INCHES (TOLERANCE NOT IMPLIED)

#### ADJUSTABLE TIMING FORMULA

The resistance required to obtain timing within this range is determined by using the formula:

Rx = 400K (T/T max.) −40K
Rx = External Res. in OHMS

T = Desired time in seconds
T max. = Maximum time (code)

A high quality deposited carbon ±1%, .1w (min.) resistor is recommended for external resistance.

### FIXED SERIES 1600

#### 10 AMPERE MODULE SERIES NUMBER — TABLE

| Series | Function | Contact Arrangement |
|---|---|---|

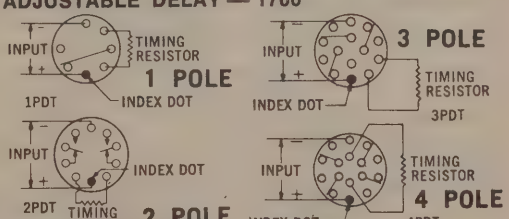
#### ADJUSTABLE DELAY — 1700



### DETERMINATION OF MODULE PART NUMBER — ORDERING INFORMATION

Hi-G Adjustable Time Delay Modules cover one decade, e.g., 62 milliseconds to 620 milliseconds; you may select any decade that best suits your application within the range of 50 milliseconds to 240 seconds. (Of course, longer ranges are available on special order.) The upper decade limit is $T_{max.}$ in the timing formula and is the timing code number in the part number described in the following paragraph.

The part number for a Hi-G Time Delay Module consists of three elements: The series number (from the Table), a letter signifying mounting style, and the timing code number. The timing code number consists of four digits and gives the time in milliseconds. The first three digits are the significant figures and the last digit is the number of zeroes following the significant figures; thus, 50 milliseconds would be coded 0500, 1.1 seconds would read 1101, and 1 minute (60 seconds) would be 6002.

A typical part number for an adjustable timing module is 1722-C-1102; this is a DC unit in the −55°C to +125°C temperature range with a 2PDT contact arrangement, in a Style C mounting, and with a time delay range of 1.1 to 11 seconds.

## TDP SERIES FIELD PROGRAMMABLE

Each TDP Model in this series performs in two (2) Delay modes, operates on multiple input voltages and functions on several time delay ranges. All these selections are easily accomplished in the field.

These versatile CMOS Digital Timers, programmed as required, will replace a multiplicity of conventional units selected by specific operating voltage, functional mode and time delay range. In addition to obvious R&D uses, production products designed with the TDP Series devices will benefit by providing component standardization, permit low inventory levels and at the same time enhance spare parts availability.

| Model | Delay Range | Operating Voltages ±10% |
|---|---|---|
| TDP-5 | A | 12 Vdc and 24 Vdc |
| TDP-1 | A | 24 Vac, 24 Vdc and 120 Vac |
| TDP-2 | A | 120 Vac and 240 Vac |
| TDP-6 | B | 12 Vdc and 24 Vdc |
| TDP-3 | B | 24 Vac, 24 Vdc and 120 Vac |
| TDP-4 | B | 120 Vac and 240 Vac |

**Range A** — 0.3 to 10, 3 to 80 and 10 to 300 seconds.

**Range B** — 1 to 15, 2 to 30, 4 to 60 and 8 to 120 minutes.

## STANDARD CHARACTERISTICS

**Contacts:** DPDT, 10 amp resistive @ 120 Vac
5 amp resistive @ 240 Vac

**Accuracy:** ±10% over voltage and temperature range

**Repeatability:** ±2%

**Recycle Time:** 300 milliseconds max. AC input
100 milliseconds max. DC input

**Reset Time:** Less than 100 milliseconds

**Current Drain:** Less than 150 milliamps

**Temperature Range:** Operational −10°C to +55°C
Storage −40°C to +85°C

**Transient Protection:** Twice input voltage for 1 millisecond standard
Optional protection up to 2500 Vac available at extra cost

# TIME DELAY RELAYS, INDUSTRIAL

## SERIES TDF REPEAT CYCLE TIMER
## SERIES TDI DELAYED INTERVAL TIMER

**TDF**

Application of power automatically initiates continuous OFF-ON Cycling of the output relay. Applications include flashing of lights, warning horns, periodic lubrication and other continuing alternate action requirements.

**TDI**

Designed to provide a single OFF-ON-OFF output cycle for each initiation. A new cycle is started by either a momentary or maintained external contact closure. Input power is to be applied continuously. This device combines the functions of separate Delay-On-Make and Interval Type timers in one package.

- **INPUT:** 24 Vac or 24 Vdc or 120 Vac.
- **TEMPERATURE RANGE:** −10°C to +55°C.
- **ACCURACY:** ±10% over temp./volt range.
- **REPEATABILITY:** ±2%.
- **CURRENT DRAIN:** 150 milliamps maximum.
- **TIME RANGES:**
  Range 1 - 0.3 to 10 seconds.
  Range 2 - 3 to 80 seconds.
  Range 3 - 10 to 300 seconds.

# SOLID STATE CONTROL 10 AMP AC

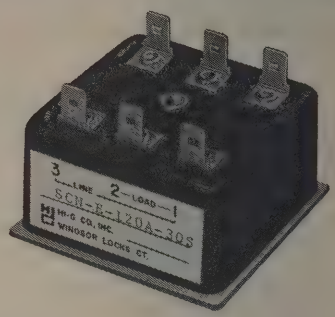
## SERIES SC

- **10 Amp AC**
- **Solid State Output**
- **Digital Timing Circuit**

All innovation in solid state control which offers:
Three operating modes • Fixed or Externally Adjustable Time Ranges • CMOS Digital Circuitry • External Control Switch Operation • Small Size • Low Cost • Simple Mounting & Wiring • Low Power Consumption • Built-in Transient Protection • Can Be Used In Delay-On-Release Mode.

NEW

This self contained power switching unit has the capability to control industrial loads such as Relays, Motors, Contactors, Motor Starters and Solenoids.



## OPERATION:

**Delay-On-Operate:** Input voltage starts timing cycle; at end of cycle output switch latches on.
**Interval Timing:** Input voltage starts timing cycle and switches output on. Upon completion of timing cycle output switch latches off.
**Repeat Cycle:** Input voltage causes output switch to cycle on and off continuously.

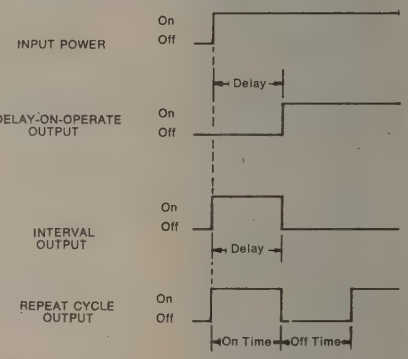
## SPECIFICATIONS

- **Input Voltage:** 24VAC or 120VAC ±10% 50/60Hz.
- **Output Current:** SPNO, 10 AMP @ 120VAC (see temperature derating curve).
- **Surge Current:** 10 times temperature derated steady-state current for milliseconds, repeated every 5 seconds maximum.
- **Timing Range:** 0.1 sec. to 2 hours (fixed or adjustable).
- **Timing Accuracy:** ±10% over temperature & voltage ranges.
- **Recycle Time:** 200 milliseconds maximum.
- **Repeatability:** ±1% at fixed temperature & voltage.
- **Power Consumption:** 3 watts maximum.
- **Temperature Range:** −10°C to +55°C.
- **Transient Protection:** 1000 volts for 100 microseconds.

## OPTIONS

- AC inputs other than 24VAC, 120VAC.
- Accuracy ±5%
- Special Timing Ranges

## LOGIC DIAGRAMS

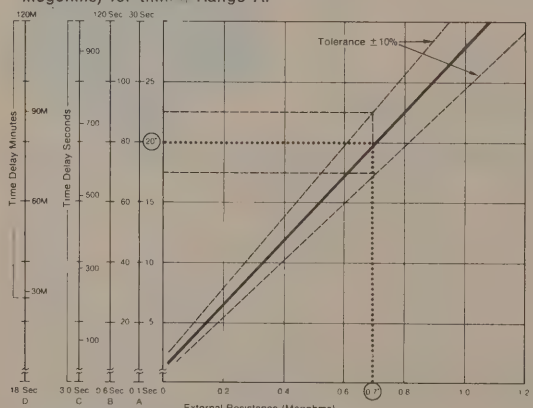


## CHARACTERISTICS

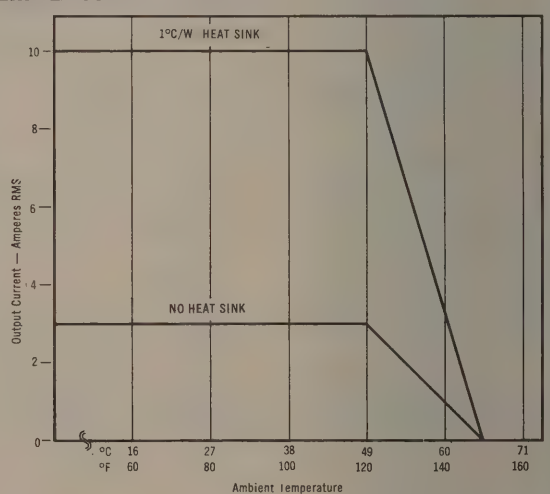
| Stock Delay Ranges | | | |
|---|---|---|---|
| Fixed | | Adjustable | Ranges |
| Seconds | Minutes | | |
| 10 | 1 | | |
| 30 | 1.5 | 0.1 Second to 30 Seconds | A |
| 60 | 3 | 0.6 Second to 120 Seconds | B |
| 120 | 6 | 3 Seconds to 900 Seconds | C |
| 180 | 9 | 18 Seconds to 120 Minutes | D |
| 300 | 12 | | |

## TIMING CURVE (Adjustable Models Only)

Timing can be field adjusted by selecting a Range, then a resistor or potentiometer value from the chart below.
Example * R external for T = 20 seconds is approximately 700 K (0.7 megohms) for timing Range A.



## TEMPERATURE DERATING CURVE



## ORDERING INFORMATION

SCO — F — 120 — 300S

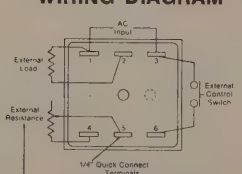
Series — O — Delay-On-Operate; N — Interval Timer; F — Repeat Cycle

F — Fixed Timing; E — Externally Adjustable

120 — 120VAC; /024 — 24VAC

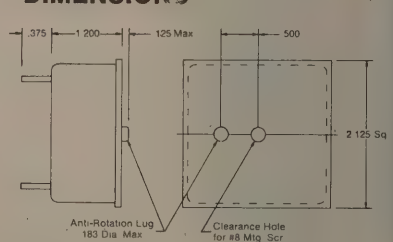
S — Seconds; M — Minutes; H — Hours

## WIRING DIAGRAM



For **externally adjustable** units see timing curve. For **fixed** units, only terminals 1, 2 and 3 are used.

## DIMENSIONS



# vacuum relays

ITT Jennings manufactures Vacuum and Gas Relays to exacting standards for use in transferring high voltage circuits. They are available in voltage ranges up to 30 KVAC, with up to 75 A. current ratings, and with operating frequencies through the VHF band. These relays are widely used in airborne, mobile and marine communications where their characteristics are particularly desirable. They have high operating speeds, withstand high voltages and carry heavy currents with high reliability ... without developing high contact resistance or generating electrical noise. The majority of applications for these relays includes the switching of antennas, frequency bands, transmit/receive modes, power circuits and elements in pulse forming networks.

*Engineering information on the use of vacuum relays for DC, AC, and RF switching as well as special capacitive circuits in included in this 16-page catalog. Specifications on various relays are organized for ease in selecting the best unit for your applications.*

# vacuum coaxial relays

ITT Jennings manufactures a broad line of coaxial relays for use where circuit currents must be contained completely within a coax system. Vacuum coaxial relays have high power handling capabilities at frequencies up to 600 MHz. Inert gas filled switches offer advantages where power levels are low and maximum system flexibility demands modular, stackable configurations.

These relays and switches have characteristics that are well suited to airborne, marine and mobile communication systems, as well as fixed installations. These characteristics include: • Low insertion loss and VSWR • High RF power capability • High isolation • Fast operation • Low, stable contact resistance • No noise generation or IM distortion • Extreme high reliability combined with ruggedness for high altitude or heavy vibration environments • Small size and lightweight for their power handling capacity • Wide bandpass characteristics. Typical applications for these units might include multiple antenna-transmit switching systems such as high speed switching from omnidirectional to directional antennas, transmit-receive switching, and where tunable elements are to be switched in transmitter and receivers. Other applications include crossbar matrices and switching trees, CCTV, CATV, and microwave telemetry and data acquisition links, as well as general coaxial instrumentation.

*This 16-page catalog describes in detail the complete line of vacuum coaxial relays, including crossover types designed for use in HF and VHF matrix crossbar systems. Also listed are a variety of fittings for assembling crossbar networks using 1-5/8, 3-1/8 and 6-1/8" lines. Typical crossbar switching matrices are described.*

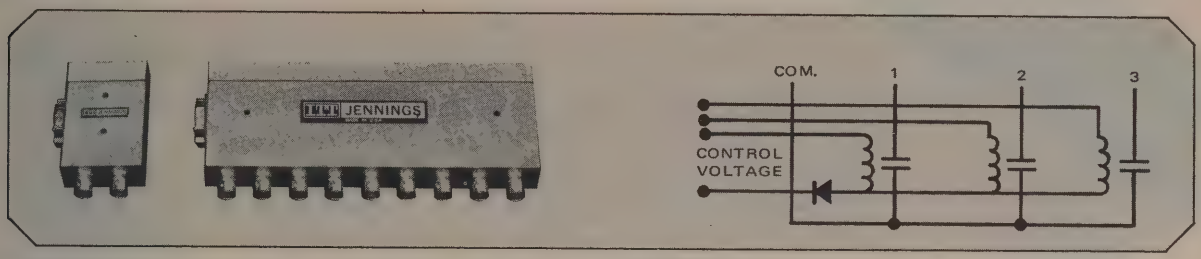
# coaxial switch modules

## RC1100 SERIES



### APPLICATIONS

- Electrically controlled switching of wideband signals, DC — 300 MHz.
- Design of complex switching circuits such as SP42T, 9P3T and other unusual switching trees.
- CATV and CCTV distribution switching.
- Telemetry and data handling networks.
- Satellite communications.
- Microwave trunks (base band and IFF frequency).
- Automatic switching of computer controlled measuring systems.
- Network analyzing digital pulse information.

### FEATURES

- One to eight throws.
- Sealed RF contacts for long life, stable contact resistance.
- Designed for over 1800 switchings/day for 30 years.
- Special contact material prevents "sticking" due to feedback currents or dry circuit operation.
- DC coils are diode protected against effects of transient voltages or use of wrong polarity.
- All-aluminum flatpack housing is easily stacked to provide multi-pole, multi-throw operation.
- Low RF leakage input and output assured up to 300 MHz.

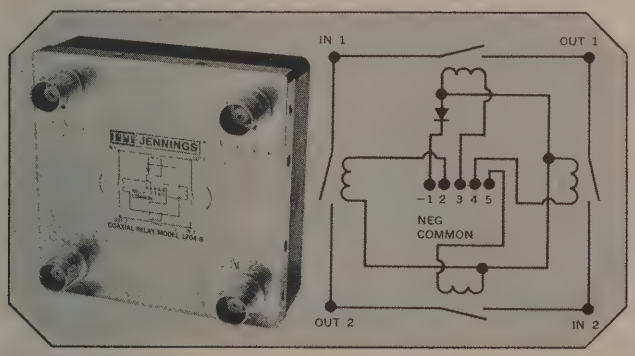
# 2 x 2 high isolation coaxial switches

## RC1204 SERIES



### APPLICATIONS

- Switch wideband signals, DC — 300 MHz.
- Electrically controlled switching in circuits requiring high isolation (such as IF video circuits) or very high isolation (such as RF video circuits).
- CATV and CCTV.
- Computer controlled measuring systems.
- Non-duplication switching in RF head-end networks.
- Communications Systems.

### FEATURES

- Minimum open circuit leakage over entire frequency range.
- Broadband frequency response — DC to 300 MHz range.
- Universal mounting design for panels, railings or brackets.
- Control connector adaptable to flexible ribbon for stripline or PC board interface.
- Rugged two-part housing — aluminum die casting and molded polycarbonate cover.
- Silver-plated signal paths shielded for maximum EMI protection.
- Reed switch elements hermetically sealed in nitrogen atmosphere.
- Rhodium-plated contacts prevent "sticking" due to feedback currents or dry circuit operation.
- DC coils are diode protected against effects of transients or use of wrong polarity.
- DC coils can be independently controlled or sequenced in pairs.

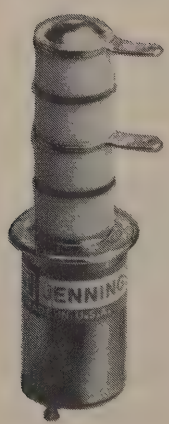
introducing
# A NEW SERIES

ITT Jennings offers the RF 40, 50 and 60 Series of Vacuum Relays which combine both high and stable voltage and current capabilities in a very small package.

These relays are ideal in applications where space is limited, weight critical, and high reliability of primary concern whether airborne, backpack, unattended or remote operations.

Rugged ceramic and copper construction allows use in high G shock and vibration environments. Voltage ratings to 7 kV, current ratings to 10A RMS, and operating frequencies from DC to 76 MHz.



## TYPICAL APPLICATIONS INCLUDE:

—Digitally-tuned RF amplifiers
—RF antenna couplers, tuners and matrices
—TWT cathode power supplies
—Heart defibrillator bleeder relays

# vacuum relays

## VACUUM DIELECTRIC

A vacuum provides the ideal dielectric for relay contacts for the following reasons:

1) The vacuum in a typical vacuum relay is below $10^{-7}$ Torr. This gives extremely high voltage breakdown characteristics as well as a fast dielectric recovery rate, as great as 10 KV per microsecond. The high dielectric strength permits close contact spacing on the order of 1000 volts per mil, and this, coupled with low mass actuators, allows quick operating speeds.

2) The vacuum provides an absolutely inert and non-reactive environment for the contacts of the relay, so contact surfaces stay clean and assure LOW contact resistance that stays low throughout the useful long life of the relay.

3) Contacts sealed in a vacuum make a relay especially suitable for use in corrosive or explosive atmospheres and they are unaffected by changes in barometric pressure, temperature or humidity, permitting trouble-free use in almost any extreme environment.

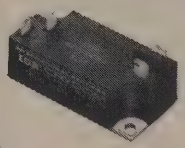
# PHOTO ISOLATED SOLID STATE POWER RELAYS AND INPUT & OUTPUT SWITCHES

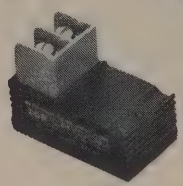
SERIES 1

SERIES 2



SERIES 30

SERIES 3/37



SERIES 4

- Ultra-Long Cyclic Life
- Minimum RFI
- Zero Voltage Crossover
- Photo Isolated
- Fast Response
- Silent Operation
- Logic Compatible Inputs
- Reverse Polarity Protected
- Integral Snubbers on Most AC Types
- Output Transient Suppression on Most DC Types
- UL Recognized and CSA Approved on Most Models
- Computer-Compatible

Photo-isolated, solid state power relay performs general purpose switching of AC loads from 2 to 40 amperes at line voltage from 90 to 480 VAC. Have normally open power contacts. Feature zero voltage switching, logic level inputs with 1500 VAC signal isolation by a unique photo-isolator. 2500 VAC and 3750 VAC also available on most models.

Generally used in applications for control of motors, lamps, solenoids, power contactors, and resistance heaters.

These relays do not contain transformers, coils or reed relays. This advanced method of input isolation provides excellent dielectric strength and transient-free de-coupling of sensitive inputs from the AC load power. All switching functions are performed by long-life, solid state semiconductor circuitry. Zero-voltage switching assures transient-free operation. Eliminates radio frequency interference, transient surges and electrical noise generated by arcing contacts or high rate-of-rise inrush current. Computer-compatible, the DC input models operate directly from low-level digital signals.

AC input models operate over a wide signal range of 90-140 VAC. Excellent surge and power-factor capabilities eliminate need for derating because of inductive or tungsten lamp loads. Almost all models contain an internal RC snubber network.

## SERIES 1 AC OUTPUT PANEL MOUNT HEAVY DUTY RELAYS
### 2.5 TO 40 AMPS, 120, 240, 480 VAC

These heavy duty panel mount solid state relays make it possible to switch AC power loads up to ten kilowatts. The output circuit is an inverse-parallel arrangement of dual SCR's to meet the most demanding requirements. Screw type terminals provide maximum connection flexibility. This series of Crydom relays has been the "standard of the industry" in heater, motor control, solenoid lamp and other load controls.

All specified maximum load ratings are based on adequate heat sink mounting of the relay base. See technical data sheets for derating and heat-sink requirements.

### GENERAL SPECIFICATIONS

Isolation Voltage: 1500 VAC Std., 2500 VAC and 3750 VAC available
Temperature Range: −30°C to +80°C
Size: 1.75″W x 2.25″D x 0.875″H
Case Style: 1

### LOW-COST TRIAC MODELS

The TD1210 and TD2410 solid-state relays are a lower cost triac output unit for applications that do not require the features of the above dual SCR output types. A glass passivated triac with unique thermal management construction provides reliable and long life operation. They have the same DC input control range and characteristics as the D1210 and D2410 models.
Control Signal Range: 3-32 VDC
Must Operate: 3 VDC
Must Release: 1 VDC
Input Impedance: 1.4 KΩ
RC Snubber Network: Included

| Model No. | Line VAC (47-63 Hz) | Max. Load Current, Amps | One-Cycle Surge, Amps | 1 Sec. Surge, Amps |
|---|---|---|---|---|
| TD1210 | 12-140 | 10 | 80 | 24 |
| TD2410 | 48-280 | 10 | 80 | 24 |

Note: For 2500 VAC isolation add suffix -1. Example: TD1210-1.

### 400 HERTZ RELAYS

High power, photo isolated solid-state relays are also available in 400 Hz versions for avionic and ground support equipment. Comparable models to the Series 1 DC input and AC input types are available for 120 and 240 VAC loads. For 400 Hz types add prefix 4, ie. 4D2410. Applies to models D12 and D24 only.

### DC INPUT MODELS

2.5 to 40 Amps. 120, 240, and 480 VAC.
Control Signal Range: 3-32 VDC
Must Operate: 3 VDC Max.
Must Release: 1 VDC Min.
Input Impedance: 1.5 KΩ
Snubber: Internal

| Model No. | Line VAC (47-63 Hz) | Max. Load Current, Amps | One-Cycle Surge, Amps | 1 Sec. Surge, Amps |
|---|---|---|---|---|
| D1202 | 100-140 | 2.5 | 15 | 5 |
| D1210 | 100-140 | 10 | 80 | 24 |
| D1225 | 100-140 | 25 | 175 | 40 |
| D1240 | 100-140 | 40 | 450 | 80 |
| D2402 | 200-280 | 2.5 | 15 | 5 |
| D2410 | 200-280 | 10 | 80 | 24 |
| D2425 | 200-280 | 25 | 175 | 40 |
| D2440 | 200-280 | 40 | 450 | 80 |
| D4808* | 340-480 | 8 | 50 | 17 |
| D4812* | 340-480 | 12 | 60 | 20 |
| D4825* | 340-480 | 25 | 175 | 40 |

*Control signal range, 3-20 VDC; input impedance, 500 ohms, min.
Note: For 2500 VAC isolation add suffix -1. Example: D2410-1.

### AC INPUT MODELS

2.5 to 40 Amps. 120, 240, and 480 VAC.
Control Signal Range: 90-280 VAC. 80 to 140 VDC
Must Operate: 90 VAC or 80 VDC
Must Release: 10 VAC or 10 VDC
Input Impedance: 40 KΩ
Snubber: Internal

| Model No. | Line VAC (47-63 Hz) | Max. Load Current, Amps | One-Cycle Surge, Amps | 1 Sec. Surge, Amps |
|---|---|---|---|---|
| A1202 | 100-140 | 2.5 | 15 | 5 |
| A1210 | 100-140 | 10 | 80 | 24 |
| A1225 | 100-140 | 25 | 175 | 40 |
| A1240 | 100-140 | 40 | 450 | 80 |
| A2402 | 200-280 | 2.5 | 15 | 5 |
| A2410 | 200-280 | 10 | 80 | 24 |
| A2425 | 200-280 | 25 | 175 | 40 |
| A2440 | 200-280 | 40 | 450 | 80 |
| A4808* | 340-480 | 8 | 50 | 17 |
| A4812* | 340-480 | 12 | 60 | 20 |
| A4825* | 340-480 | 25 | 175 | 40 |

*Control signal range, 90-120 VAC; input impedance, 12K ohms, min.
Note: For 2500 VAC isolation add suffix -1. Example: A1240-1.

IOR

# SERIES 2 AC OUTPUT PANEL MOUNT RELAYS
## 8 AND 15 AMPS, 120 AND 240 VAC

The Crydom Series 2 Solid State Relays combine small size and high current rating in a package designed for heat sink or panel mounting. Standard 0.187" push-on terminals allow quick connection and are positioned to provide maximum isolation between signal and power circuits. They are controlled directly by logic level DC signals and turn on and off within one-half cycle. Most models are U.L. recognized and CSA approved.

These units have 8 and 15 ampere ratings when heat sink mounted and contain an internal snubber, yet occupy less than 1.0 cubic inch. For heat-sink requirements and derating see technical data sheets.

### GENERAL SPECIFICATIONS

Control Signal Range: 3.5-8 VDC
Must Operate +3.5 VDC Max.
Must Release 1 VDC Min.
Must Operate Current: 12 mA Max.
Isolation Voltage: 1500 VAC. Also available with 2500 VAC
Temperature Range: —30°C to +80°C
Snubber: Internal
Case Style: 2

| Model No. | Line VAC (47-63 Hz) | Max. Load Cur. @ 40°C (Amps RMS) | One-Cycle Surge (Amps PK) | 1 Sec. Surge (Amps PK) |
|---|---|---|---|---|
| S218 | 20-140 | 8 | 120 | 42 |
| S228 | 40-280 | 8 | 120 | 42 |
| S2115 | 20-140 | 15 | 240 | 66 |
| S2215 | 40-280 | 15 | 240 | 66 |

Note: For 2500 VAC isolation add suffix -1. Example: S218-1.

# SERIES 3 AC OUTPUT P.C. BOARD MOUNT RELAYS
## 2 AND 4 AMPS, 120 AND 240 VAC. INTEGRAL HEAT RADIATOR S3714, S3724

Series 3 combines small size, maximum current rating and minimum off-state leakage in a package designed for solder connection into printed circuit boards. The units are 0.4 cubic inch in volume and consume only 1.0 square inch of PCB mounting space. An overall height of 0.4", on most models, allows PCB spacing on ½" centers. The square rigid pins are also suitable for wire wrap or push-on connectors. The S3714 and S3724 provide a P.C. mount unit with the greatest available output, (4A because of its unique integral heat radiator). All relays are rated at 40°C ambient temperature. For derating at high ambient see technical data sheets. All except the S310, S320, S312 and S322 have internal snubbers (resistor capacitor transient suppression networks).

### GENERAL SPECIFICATIONS

Control Signal Range: 3.5-8 VDC
Must Operate: +3.5 VDC
Must Release: 1.0 VDC, Min.
Must Operate Current: 12 mA
Isolation Voltage: 1500 VAC. Also available with 2500 VAC
Temperature Range: —30°C to 80°C
Snubbers: Intergral, except S312, S322

| Size | Model | Case Style |
|---|---|---|
| .60"W, 1.2"D, .63"H | S312 and S322 | 3 |
| .60"W, 1.45"D, .63"H | S3012 and S3022 | 30 |
| .80"W, 1.45"D, 1.10"H | S3714 and S3724 | 37 |

| Model No. | Line VAC (47-63 Hz) | Max. Load Current @ 40°C Amps (RMS) | One-Cycle Surge, Peak (Amps) PK | 1 Sec. Surge (Amps) PK | Internal Snubbers |
|---|---|---|---|---|---|
| S310 | 20-140 | 0.3 | 4.0 | 2.5 | No |

| S3724 | 40-280 | 4 | 80 | 18 | Yes |

# SERIES 30 DC OUTPUT SOLID STATE RELAYS
## 0.5 AMP, 200 VDC LOAD. P.C. BOARD MOUNT

The B3020 DC Relays are available in two models: the low cost model B3020R5, without internal transient suppression, and the model B3020R5A, with internal suppression. Both models provide features of fast response, photo isolation, input and output reverse voltage protection, and direct control by digital logic circuits. Applications include replacement of discrete component solid state switches for control of solenoids, valves, motors and lamps. The package size and termination are similar to relay S3012.

### GENERAL SPECIFICATIONS

Control Signal Range: 3-8V
Must Operate: 3V, Max.
Must Release: 1V, Min.
Input Impedance @ 5 VDC: 10 mA DC, Max.
Isolation Voltage: 1500 VAC RMS
Temperature Range: —30°C to + 80°C
Size: 0.8"W, 1.45"D, 0.63"H
Case Style: 30

| Model No. | Line VDC | Max. Load Current @ 50°C (Amps) | One-Cycle Surge (Amps) | 50 mSec. Surge (Amps) | Transient Suppression |
|---|---|---|---|---|---|
| B3020R5 | 10-200 | 0.5 | 240 | 3 | No |
| B3020R5A | 10-200 | 0.5 | 240 | 3 | Yes |

# SERIES 4 AC AND DC INPUT AND OUTPUT SWITCHES
## UP TO 4 AMPS OUTPUT RATING

The Crydom Series 4 Input/Output switches offer a complete and highly flexible set of AC and DC devices that provide isolated interfaces between programmable controllers, microprocessors, computerized machine controls, and the outside field elements including solenoids, valves, heaters, motors, etc.

Each switch contains a clearly visible, but recessed for protection, LED status indicator associated with the control condition of the device for easy program set up and testing.

Output units can deliver 2.75A at 70°C and 4A at 40°C — power levels necessary for high reliability industrial applications. Lower load-rated switches are also available.

The Series 4 Output switches are essentially four terminal solid-state relays which accept logic level control signals and switch a DC or AC power load. The input switches accept power level potential controls and convert them to an isolated logic level (TTL, CMOS, etc.) signal. The entire set of Crydom Input/Output switches provides an electrically clean, isolated, and noise-free interface between "smart" circuitry and external power-operated load functions. The output units have wide compatibility with resistive and inductive loads through the inclusion of internal transient suppression on the DC models and internal snubber networks on the AC models.

### GENERAL SPECIFICATIONS

***Logic Load For All Input Switches**
Supply Voltage: 4.5 VDC/18 VDC, Max.
Supply Current: 7 mA, Max.
Isolation Voltage: 1500 VAC
Temperature Range: —30°C to +80°C
Case Style: Style 4
Color Coding: AC Field — Red Terminal Block
DC Field — Blue Terminal Block
Input Unit — White Case
Output Unit — Black Case

****Logic Control For All Output Switches**
Control Range: 4-8 VDC
Control Current: 16 mA, Max.
Must Operate Voltage: 4 VDC
Must Release Voltage: 0.8 VDC

| Switch Type | Part No. | Control Voltage | Max. Load Voltage | Max. Load Current |
|---|---|---|---|---|

# HEAT SINKS FOR SERIES 1 AND 2 RELAYS

These aluminum alloy heat sinks provide excellent heat dissipation and allow maximum power to be handled by the solid state relays. Note: All current ratings are based upon the use of a suitable thermally-conductive component (e.g.) silicone grease between the SSR mounting base and the mounting surface.

| Model No. | Current Rating (Use for) | Use for Series |
|---|---|---|
| HS-1 | Below 10 Amps | 1 and 2 |
| HS-2 | 5 to 20 Amps | 1 and 2 |
| HE-54 | Above 20 Amps | 1 |

# CALL US BY OUR FIRST NAME

At ITT Components Group we are proud of our worldwide resources. 2,000 people . . . one million square feet of manufacturing space . . . throughout seven countries. We manufacture and market the most modern and most reliable relays and they are available to you from one location.

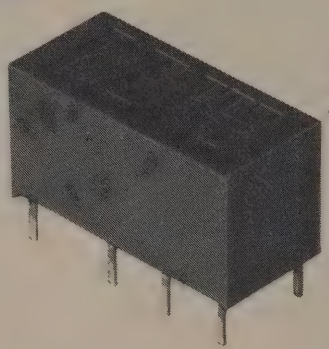
The ITT name — known the globe over — sets our very high standards. Our R&D facilities provide the latest in materials and switching techniques assuring the highest reliability at the most economical cost.

On this page and the five following. we present some highlights from our relay line. First two pages: specifications of our subminiature PCB relays. Next two pages: printed-circuit, low-profile PZ relays designed especially for high speed switching applications in logic, control, and communications equipment. Last two pages: Type 24/25/26 cradle relays which are available in single, bifurcated, and heavy duty versions.

## RZ
## 1A DUAL-IN-LINE RELAYS

**$1.85***

- **2 Form C Crossbar Contacts**
- **Dual-In-Line Configuration**
- **Low Profile, Printed Circuit or DIP Socket**
- **Molded Construction Ideal for Flow-Solder**
- **Automated Assembly and Test**

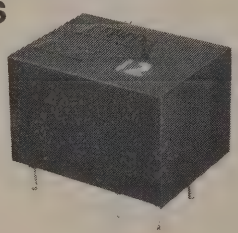


ITT Components Group is a powerhouse of relay resources. And here is our smallest powerhouse — the RZ relay. This subminiature dual-in-line printed circuit board relay, a significant advancement in relay state-of-the-art, has a unique symmetrical layout in a DIP package and a 2 Form C (DPDT) design with single silver cross--bar contacts which provides switching characteristics of 1A, 30W, or 50VA. Size? The RZ stands only 0.433 inches above the board.

That's a lot of power in a little package.

## LZ
## 5A SUB-MINIATURE PRINTED CIRCUIT RELAYS

**$1.30***

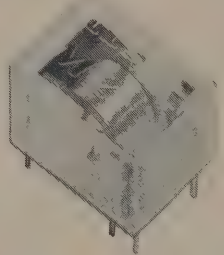


- **Low Cost, Low Profile**
- **Vibration and Shock Resistant**
- **Printed Circuit Mounting (0.1 in.)**
- **Sub-miniature Size**
- **Designed to Satisfy UL and CSA Requirements**
- **Dust-Free Enclosure**
- **Low Level to 5A**

The LZ miniature printed circuit relays are specifically designed to withstand high shock and vibration conditions. These 5A, 1 Form C relays, have been designed for mounting on standard printed circuit boards and are sealed to help prevent soldering and cleaning problems.

## MZ
## 1A SUB-MINIATURE PRINTED CIRCUIT RELAYS

**$1.25***

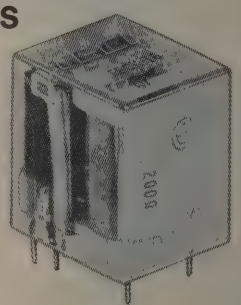


- **1 Form C General Purpose**
- **Dual-In-Line Configuration**
- **Gold Contacts for Low-Level Loads GS Contacts for Normal Loads**
- **Improved Shock and Vibration Characteristics**
- **Miniature Size — 0.4″ Height**
- **Dust-Free Enclosure**
- **Economical/Low Cost**

The MZ series of sub-miniature dual-in-line relays are ideal for current cost conscious engineers for design of low profile printed circuit equipment requiring speed, reliability and repeatability. They are available with 1 Form C (SPDT) crossbar contacts either low level or standard 1A (for 2 Form C see TECK specifications). Efficient design for shock and vibration applications. They are provided with a dust-free enclosure.

## TECK
## 0.5A MINIATURE PRINTED CIRCUIT RELAYS

**$1.60***



- **Miniature 2 Form C**
- **Rugged Construction**
- **High Reliability**
- **Low Cost**
- **Dust-Free Enclosure**

The TECK series printed circuit relays are ideally suited for applications where space is at a premium. Their small size, reliability, ruggedness and low cost make them a unique series of relays. They are available in a variety of contact configurations with SPDT and DPDT bifurcated contacts standard, and all types come standard with a dust-free enclosure.

*1000 piece price.

# SUB-MINIATURE PRINTED CIRCUIT BOARD RELAYS

## 1A SUB-MINIATURE PRINTED CIRCUIT RELAYS — MZ*

**Standard Coil and Contact Combinations (20°C)**

| Nominal Voltage | Pull-In Voltage* | Maximum Continuous Voltage | Coil Resistance ±10% Ohms | Ordering Code Au Overlay Ag Pd Base |
|---|---|---|---|---|
| 1.5 | 1.05 | 1.65 | 5 | MZ1.5HG |
| 3 | 2.1 | 3.3 | 20 | MZ3HG |
| 5 | 3.5 | 5.5 | 56 | M5ZHG |
| 6 | 4.2 | 6.6 | 80 | MZ6HG |
| 9 | 6.3 | 9.9 | 180 | MZ9HG |
| 12 | 8.4 | 13.2 | 320 | MZ12HG |
| 24 | 16.8 | 26.4 | 1280 | MZ24HG |
| **Ultra Sensitive Types** | | | | |
| 1.5 | 1.05 | 1.65 | 12 | MZ1.5HS |
| 3 | 2.1 | 3.3 | 45 | MZ3HS |
| 5 | 3.5 | 5.5 | 120 | MZ5HS |
| 6 | 4.2 | 6.6 | 180 | MZ6HS |
| 9 | 6.3 | 9.9 | 400 | MZ9HS |
| 12 | 8.4 | 13.2 | 700 | MZ12HS |
| 24 | 16.8 | 26.4 | 2800 | MZ24HS |

Must release voltage is 10% of nominal.

### CONTACT DATA

**LOAD — Switched power:** 25W, 100VA. **Switched current:** 1A. **Switched voltage:** 24VDC, 100VAC.

**LIFE — Electrical expectancy:** $1x10^6$ operations @ 80mVDC, 50μA-MZHG series. $5x10^5$ operations @ 24VDC, 1A-MZH series. **Mechanical expectancy:** $10x10^6$ operations minimum.

**CONTACT RESISTANCE** — 100mΩ.

**OPERATE AND RELEASE TIME — Operate time (approximate):** 3ms. **Release time (approximate):** 2ms.

**INSULATION RESISTANCE** — >5MΩ.

**CONTACT MATERIAL — 50μA type:** Gold overlay, silver palladium. **0.5A-1A Type:** Silver 90%, Gold 10%.

**CONTACT FORM:** 1 Form C.

### COIL DATA

**POWER CONSUMPTION @ 20°C — Coils at nominal voltage:** 0.45W.

**CONTINUOUS COIL POWER — Maximum allowable @ 20°C:** 1W. **@ 50°C:** 0.48W.

## 1A DUAL-IN-LINE RELAYS — RZ*

**Standard Coil and Contact Combinations (20°C)**

| Nominal Voltage | Pull-In Voltage* | Maximum Continuous Voltage | Coil Resistance ±10% Ohms | Ordering Code |
|---|---|---|---|---|
| 5 | 3.2 | 6.9 | 45 | RZ-4.5 |
| 6 | 4.3 | 8.9 | 60 | RZ-6 |
| 12 | 8.4 | 19.2 | 280 | RZ-12 |
| 24 | 17.3 | 36.6 | 1070 | RZ-24 |
| 48 | 36.0 | 72.0 | 4000 | RZ-48 |

Must release voltage is 10% of nominal.

### CONTACT DATA

**LOAD — Switched power:** 50VA. **Switched current:** 1A. **Switched voltage:** 125VAC, 150VDC.

**LIFE — Electrical expectancy:** 60VDC/20W: $1x10^6$ operations. 60VAC/20W: $1.5x10^6$ operations. **Mechanical expectancy:** $1x10^7$ operations.

**CONTACT RESISTANCE** — ≤50mΩ.

**OPERATE AND RELEASE TIME — Operate time:** ≤6ms. **Release time:** ≤3ms.

**INSULATION RESISTANCE** — 100MΩ.

**CONTACT MATERIAL** — Crossbar - silver.

**CONTACT FORM** — 2 Form C.

### COIL DATA

**POWER CONSUMPTION — Coils at nominal voltage:** 515 to 600mW.

**CONTINUOUS COIL POWER — Maximum allowable @ 20°C:** 1050mW. **@ 40°C:** 840mW. **@ 55°C:** 680mW.

## 5A SUB-MINIATURE PRINTED CIRCUIT RELAYS — LZ*

**Standard Coil and Contact Combinations (20°C)**

| Nominal Voltage | Pull-In Voltage | Maximum Continuous Voltage | Coil Resistance ±10% Ohms | Ordering Code* |
|---|---|---|---|---|
| **Standard Types — 3A** | | | | |
| 5 | 4.0 | 5.5 | 56 | LZ-5 |
| 6 | 4.8 | 6.6 | 80 | LZ-6 |
| 9 | 7.2 | 9.9 | 180 | LZ-9 |
| 12 | 9.6 | 13.2 | 320 | LZ-12 |
| 24 | 19.2 | 26.4 | 1280 | LZ-24 |
| 48 | 38.4 | 52.8 | 3800 | LZ-48 |
| **Power Types — 5A** | | | | |
| 5 | 4.0 | 5.5 | 56 | LZ-5H |
| 6 | 4.8 | 6.6 | 80 | LZ-6H |
| 9 | 7.2 | 9.9 | 180 | LZ-9H |
| 12 | 9.6 | 13.2 | 320 | LZ-12H |
| 24 | 19.2 | 26.4 | 1280 | LZ-24H |
| 48 | 38.4 | 52.8 | 3800 | LZ-48H |
| **High Sensitive Types** | | | | |
| 5 | 4.0 | 5.5 | 80 | LZ-5S |
| 6 | 4.8 | 6.6 | 110 | LZ-6S |
| 9 | 7.2 | 9.9 | 250 | LZ-9S |
| 12 | 9.6 | 13.2 | 440 | LZ-12S |
| 24 | 19.2 | 26.4 | 1780 | LZ-24S |

For bifurcated contacts (Silver Palladium Gold Overlay) add "W" to ordering code.

### CONTACT DATA

**LOAD — Switched power:** 90W, 300VA. **Switched current:** 3A. **Switched voltage:** 24VDC, 100VAC.

**LIFE — Electrical expectancy:** $1x10^5$ operations at 3A, 100VAC. $5 \times 10^5$ operations at 3A, 24VDC. **Mechanical expectancy:** $20x10^6$ operations.

**CONTACT RESISTANCE** — 100mΩ.

**OPERATE AND RELEASE TIME — Operate time:** 5ms typical. **Release time:** 3ms typical.

**INSULATION RESISTANCE** — 250MΩ.

**CONTACT MATERIAL — Single:** Silver/Gold overlay. **Bifurcated:** Silver Palladium Gold overlay.

**CONTACT FORM** — 1 Form C (for 2 Form C see TECK specifications).

### COIL DATA

**POWER CONSUMPTION — Coils at nominal voltage @ 20°C:** 450mW for standard type. 330mW for high sensitive type.

**CONTINUOUS COIL POWER — Maximum allowable @ 20°C:** 1.5W.

## 0.5A MINIATURE PRINTED CIRCUIT RELAYS — TECK

**Standard Coil and Contact Combinations (20°C)**

| Nominal Voltage | Pull-In Voltage | Maximum Continuous Voltage | Coil Resistance ±10% Ohms | Ordering Code |
|---|---|---|---|---|
| **SPDT** | | | | |
| 1.5 | .85 | 1.65 | 12 | TECK-T1.5 |
| 3 | 1.7 | 3.3 | 50 | TECK-T3 |
| 6 | 3.5 | 6.6 | 200 | TECK-T6 |
| 9 | 5.0 | 9.9 | 400 | TECK-T9 |
| 12 | 7.5 | 13.0 | 800 | TECK-T12 |
| 24 | 14.0 | 27.0 | 2500 | TECK-T24 |
| **DPDT** | | | | |
| 1.5 | .91 | 1.65 | 8 | TECK-TT1.5 |
| 3 | 1.7 | 3.3 | 30 | TECK-TT3 |
| 6 | 3.6 | 6.6 | 125 | TECK-TT6 |
| 9 | 5.2 | 9.9 | 250 | TECK-TT9 |
| 12 | 7.5 | 13.0 | 500 | TECK-TT12 |
| 24 | 13.8 | 27.0 | 1500 | TECK-TT24 |

Flow solder, submergible versions are available for use in normal cleaning solutions. Add the letter "P" after voltage.

### CONTACT DATA

**LOAD — Switched power:** 50VA. **Switched current:** .5A. **Switched voltage:** 100V.

**LIFE — Electrical expectancy:** $20x10^6$ operations. **Mechanical expectancy:** $50x10^6$ operations.

**CONTACT RESISTANCE** — 50mΩ (typical).

**OPERATE AND RELEASE TIME — Operate time:** 7ms. **Release time:** 3ms.

**INSULATION RESISTANCE** — >50MΩ.

**CONTACT MATERIAL** — Gold/silver, PGS and Pt contacts available.

**CONTACT FORM — TECK-T:** SPDT. **TECK-TT:** DPDT.

### COIL DATA

**POWER CONSUMPTION — Coils at nominal voltage:** 0.15W.

**CONTINUOUS COIL POWER — Maximum allowable:** 1.75W.

# PRINTED CIRCUIT MINIATURE RELAYS

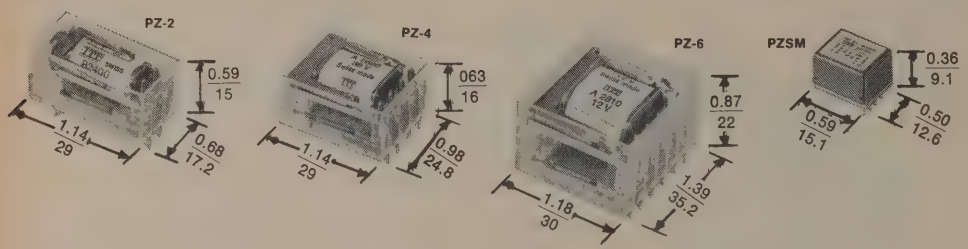
PZ

## PZ-2 PZ-4 PZ-6

These low profile relays were designed especially for printed circuit applications utilizing standard pulse communication techniques. They are also available in latching versions as well as in sub-miniature packages. Contacts are gold and silver alloys to insure specified contact resistance over full life. Totally automated production eliminates human error and guarantees all parameters. Their polycarbonate case is designed to be used with or without top cover. There are more than 70 standard types. All are UL Recognized (File E57102).

## PZSM

- 15 Years Proven Telecommunications Experience
- Switch 1A in 1.7 Cubic Centimeter
- Subminiature Size — Height 0.36″
- High Reliability
- 2 Form C in 0.1 Cubic Inch
- Operates From IC Logic and Standard DC Voltages
- 0.1 Inch Grid Spacing
- Printed Circuit Board Application
- Less Than 0.3in² on PC Board
- Standard Flow-Solder Techniques
- Sealed Enclosure Immune to Washing Process



ALL DIMENSIONS IN INCHES / MM

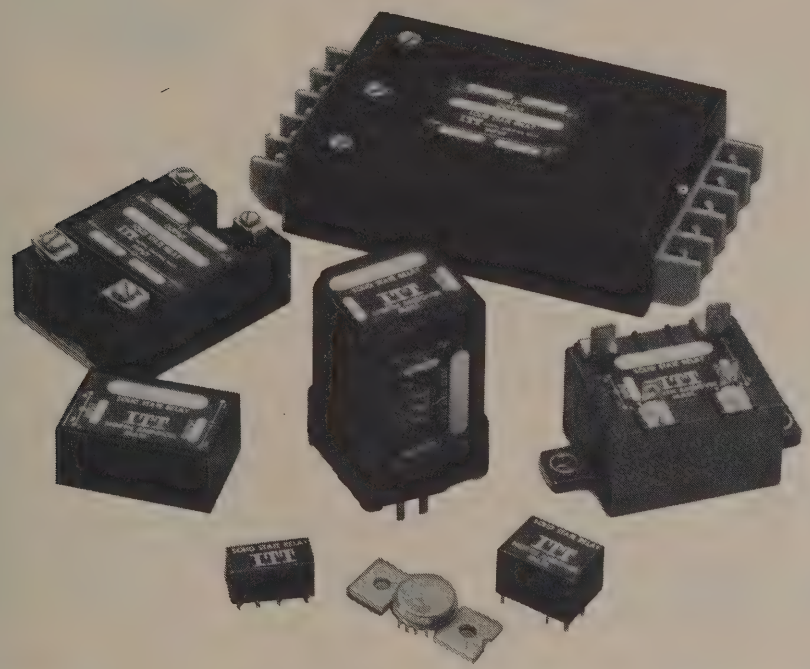
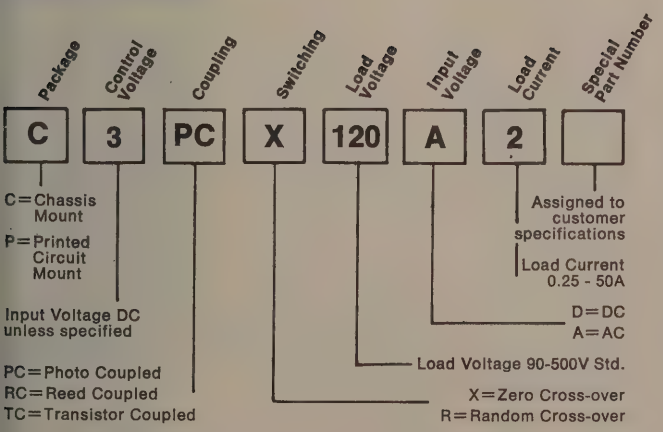
# SOLID STATE RELAYS

- 70 Models in 12 Package Styles
- 1A to 40A in AC and DC Versions
- All Internal Triacs and SCRs Are Triple Tested and Selected
- Smallest Packages Consistent With Thermal Considerations

It takes an EMR expert, like ITT Components Group, to translate your switching and isolation needs into solid state technology. We offer built-in snubbers, unique heat dissipation systems for high surge capability, and true zero cross-over circuitry. You can choose from photo, transistor and reed coupling. And you can build your own part number from the chart below and order a solid state relay customized to your own requirements. Or choose a standard ITT solid state relay from any of the types listed in the Basic Cross Reference chart. Either way you get the reliability and long life which makes our SSRs an excellent alternative to electromechanical relays.



## Ordering Codes



**Example:** **C12PCX120A2**

The above code signifies a chassis mount, photo coupled SSR with input voltage of 3 VDC, load voltage of 120VAC, designed for zero cross-over in an AC application. Load current is 2A.

## Basic Cross Reference Chart

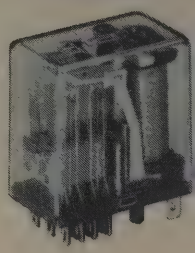
Consult factory for other combinations of package, voltage, current, etc.

# MINIATURE RELAYS

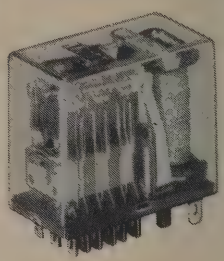
- **One Piece Core and Yoke** giving improved magnetic efficiency and stability
- **One Piece Bobbin and Terminal** gives rigid coil terminations
- **Polycarbonate Insulation** — negligible moisture absorption ensuring stability of spring-set adjustment
- **Underwriters Laboratories Recognized (#E57102)**
- **CSA Approved (LR38310-1)**

Type 24

Type 25



Type 26



ITT Type 24/25/26 miniature relays are fully interchangeable in form fit and function with all well known cradle types. 2, 4 & 6 Form C is standard; 2, 4 or 6 Form A or B is available on request. A variety of contact materials is available in single and twin light duty. Heavy duty single contacts are available; these are listed in the Load and Life Data table. Several options are available to meet different load requirements. Single silver contacts are excellent for loads up to 2A. Twin (bifurcated) contacts should be used for carrying low loads, 100mA and lower (dry circuits). Heavy duty single cadminum oxide contacts give 5A ratings. Twin contacts are available in gold alloy or fine silver.

## Load and Life Data

| | Single and Bifurcated Contact Materials | | | Heavy Duty Contact Materials | |
|---|---|---|---|---|---|
| | A<br>Silver | B<br>Gold Nickel Alloy 95%:5% | C<br>Silver/ Palladium Alloy 40%:60% | D<br>Large Diameter Heavy Duty Silver | E<br>Silver/ Cadmium-Oxide for Inductive Loads |
| Max. switched power<br>a.c. (VA)<br>d.c. (W) | <br>60<br>30 | <br>40<br>20 | <br>100<br>50 | <br>250<br>100 | <br>500<br>100 |

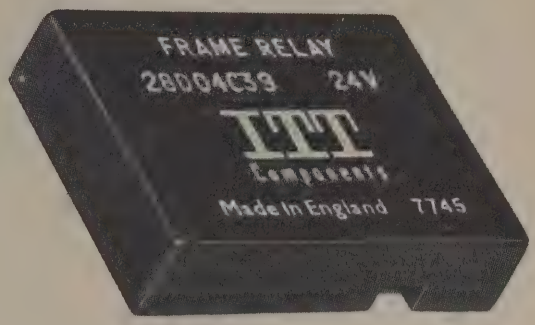
# LOW PROFILE FRAME RELAYS

# TYPE 28

- **ITT'S TYPE 28 'LO-PAC' FRAME RELAY — A NEW APPROACH TO LOW PROFILE PRINTED CIRCUIT RELAYS.**
- **Use of well proven springset from the ITT Cradle/25 relay gives an assurance of quality backed by years of user experience.**
- **A variety of contact materials available in Single, Twin and Heavy Duty types.**
- **Direct PC board mounting on 2.54mm spacing.**
- **Height above PC board of 10.5mm conforms to IEC recommendations and requirements.**



## CONTACT DATA / TABLE 1

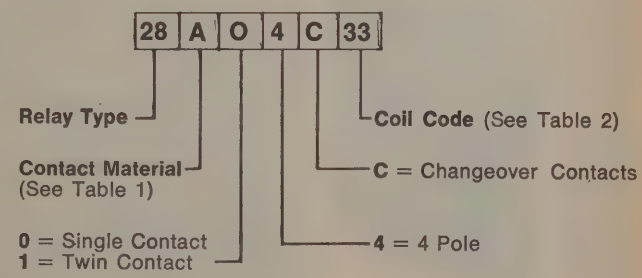
| Contact Material Code | A | B | C | D |
|---|---|---|---|---|
| Contact Material | Silver Light Duty | Gold/Nickel (95%/5%) Light Duty | Palladium/ Silver (60%/40%) Light Duty | Silver Heavy Duty |
| Contact Type | Single or Twin | Twin | Twin | Single |
| Maximum AC Rated Load (V A) | 60 | 40 | 100 | 250 |
| Maximum DC Rated Load (W) | 30 | 20 | 50 | 100 |
| Maximum Switched AC or DC Voltage (V) | 110 | 110 | 110 | 250 |
| Maximum Switched AC or DC Current (A) Up to $1 \times 10^6$ ops | 1 | 1 | 1 | 5 |

**Insulation Resistance:** 100 mΩ min at 500 VDC
**Voltage Proof:** 100V RMS at 50 Hz
**Mechanical Life (No Load):** $10^8$ operations
**Initial Contact Resistance (All Contact Codes):** 50 mΩ typical
**Operate Time (Including Bounce):** 10 mS. max (saturate coil voltage)
**Release Time (Including Bounce):** 10 mS. max (open circuited coil)
**Saturate Voltage (20°C):** 150% of nominal rated DC voltage
**'Must Operate' Voltage (20°C):** 75% of nominal rated DC voltage
**Insulation Resistance:** 100 mΩ min at 500 VDC
**Voltage Proof:** 1000V RMS at 50 Hz
**Relay Mass:** 24g max

## COIL DATA / TABLE 2

| Contact Type (See Table 1) | Nominal Rated DC Voltage | Operating Voltage Range (at 20°C) | Coil Resistance (at 20°C) | Nominal Power at "Must Operate" Voltage | Coil Code Number |
|---|---|---|---|---|---|
| | V | V | Ω±10% | mW | |
| Single Light Duty | 3 | 2.3 to 5 | 16.5 | 310 | 31 |
| | 6 | 4.5 to 10 | 65 | 310 | 32 |
| | 12 | 9 to 20 | 260 | 310 | 33 |
| | 24 | 18 to 40 | 1050 | 310 | 34 |
| | 48 | 36 to 80 | 4200 | 310 | 35 |
| Single Heavy Duty and Twin Light Duty | 3 | 2.3 to 4.5 | 12 | 425 | 36 |
| | 6 | 4.5 to 9 | 48 | 425 | 37 |
| | 12 | 9 to 18 | 190 | 425 | 38 |
| | 24 | 18 to 36 | 770 | 425 | 39 |
| | 48 | 36 to 72 | 3000 | 425 | 40 |

Relays are ordered by means of a picture code as follows:



28 A O 4 C 33
Relay Type
Contact Material (See Table 1)
0 = Single Contact
1 = Twin Contact
4 = 4 Pole
C = Changeover Contacts
Coil Code (See Table 2)

THE ABOVE EXAMPLE SHOWS A TYPE 28 RELAY WITH SINGLE LIGHT DUTY SILVER CONTACTS, 4 POLE CHANGEOVER, SUITABLE FOR A NOMINAL 12 VDC COIL OPERATION.

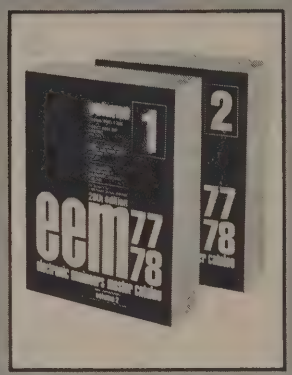
# WE KNOW OUR STUFF

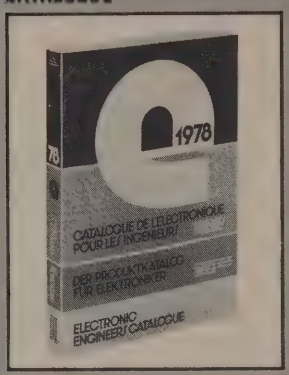
## 41 YEARS OF EXPERIENCE IN CATALOGING, 21 EDITIONS OF eem

### eem/ELECTRONIC ENGINEERS MASTER CATALOG —



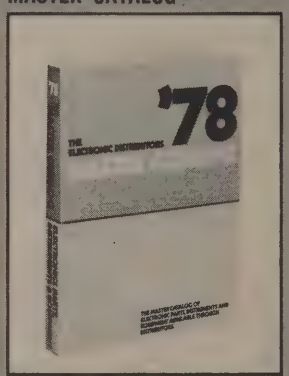
The "blue-ribbon" catalog/directory that has become "the standard of the industry" for electronic engineers, buyers and specifiers.

### ELECTRONIC ENGINEERS CATALOGUE



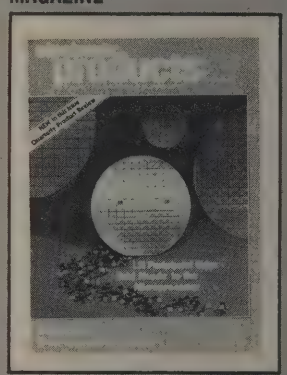
The new catalogue/directory of electronic products available to and from Western Europe and the United Kingdom. Designed especially for the European electronics engineer.

### ELECTRONIC DISTRIBUTORS MASTER CATALOG —



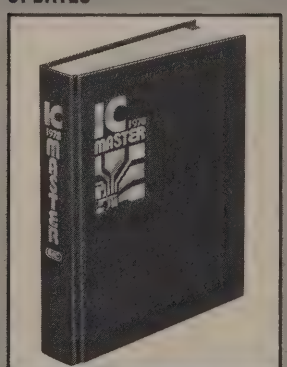
The only national catalog designed exclusively for distributors and their customers featuring electronic parts, instruments and equipment.

### ELECTRONIC PRODUCTS MAGAZINE —



The products magazine . . . A 100% product-oriented magazine including hundreds of new products and special features every month.

### IC MASTER AND THE UPDATES —



The only complete single-source directory including all IC devices manufactured in the United States. Updated three times yearly with accumulative supplements.

### eem FILE SYSTEM —

The only filing system designed especially for the electronics engineer. Instant retrieval and organization of data sheets and catalogs.

### UTP CUSTOM CATALOGS —

The Cadillac of individualized catalogs for the electronic parts distributor, featuring solely his lines and services.

### UNITED COST AND PRICING SERVICES —

The electronic distributors' proven method of being up to the minute on his cost and selling prices.

*United Technical Publications, Inc., Div. of Cox Broadcasting Corp. 645 Stewart Ave., Garden City, N.Y. 11530 / (516) 222-2500 TWX 510-222-1673*

# Let Kilovac® turn you on!

## Or off, as the case may be, KILOVAC relays offer the following outstanding features:

HC-1

KM-14

H-25

- Ratings to over 100 kV
- Long Life — one million plus operations
- Light Weight — as little as 1 oz.
- Non-oxidizing contacts
- Fast-Operate Time — 10 ms typical
- High Dielectric, smaller size per voltage/current rating

### 1. RELIABILITY

In the right application, with the KILOVAC relay selected to do a specific job, millions of cycles of mechanical life are possible with little or no degradation in performance specifications.

### 2. VACUUM IS THE OPTIMUM DIELECTRIC

It isolates approximately 2000 volts per .001 inch of contact gap. (A vacuum relay is a high voltage insulator and a low loss conductor). When breaking a load, vaporized metal from the contacts creates a high pressure area which rapidly expands the ionized metal vapor into the low pressure area surrounding the contacts. The result is a phenomenon termed "arc blowout." By this limit on arc time, contacts are subjected to less erosion and have longer life.

### 3. THE VACUUM "SELF-PUMPING" FEATURE

When the ionized metal vapor expands, as described above, it entraps gas molecules on the inner relay envelope, maintaining or even increasing the vacuum level.

### 4. LOW AND STABLE CONTACT RESISTANCE

This varies from cycle to cycle in conventional relays but remains stable over the life of a vacuum relay. This is due to: cleanliness of parts, lack of oxidation or contamination, and use of non-magnetic materials in the contact area. No contact maintenance required.

### 5. FAST OPERATE TIME

Short contact travel and low mass contacts mean faster operate time and a lower coil power drain.

### 6. SMALLER SIZE AND WEIGHT

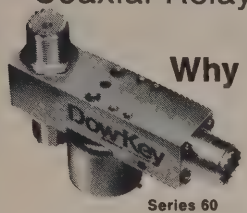
Due to small contact gap and short contact travel made possible by a vacuum dielectric, package size and weight are reduced.

### 7. SAFETY

Contacts are sealed within the vacuum envelope, switching in explosive atmospheres may be safely accomplished.

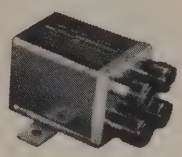
Kilovac® CORPORATION

## Coaxial Relays: Hz to GHz



Series 60

### Why Use Dow-Key?



Series 412

- Coaxial Relays
- Vacuum Coaxial Relays
- Microwave Coaxial Relays

In recent years coaxial relay and microwave switch applications have expanded in number and increased in operating frequency. For 30 years, Dow-Key has been a pioneer in these trends by introducing new higher frequency, higher power, more versatile devices while maintaining its recognized standards of quality and performance.

Dow-Key relays continue to provide high isolation, low VSWR and insertion loss, along with reliable operation over a wide range of severe environments and broad frequency ranges. Options are available to fit your system. You can select RF power capacity, operating voltage, failsafe or latching, and standard and special RF connectors.

You should also consider Dow-Key **vacuum** coaxial relays. They combine the unique high power/high voltage capability of a vacuum relay with the RF performance of a coaxial relay. Look to Dow-Key to fill your requirements for rapid, reliable, low loss coaxial switching in a wide range of applications including:

**COMMUNICATIONS**
- Satellite terminals.
- Transmit-receive switching to common antenna, grounding of receiver to protect against burn out, switching of one transmitter to one of many antennas.
- Manual and remote multi-antenna switching, many antennas to one transmitter.
- Insertion of amplifiers into circuit.
- Switching of broadband carriers from failed to standby circuits.
- Matrix switching of multiple receivers.
- Transmit power sampling.
- Transmitters to multiple antennas.
- Transfer-crossover of transmitter-antenna or receiver-antenna pairs.

**CATV/CCTV**
- Non-duplication switching RF head ends.
- Tone signal switching remote program control.
- Hospital video systems.
- Channel select, programming control.
- Closed circuit switching such as classroom TV teaching.
- Studio video signal switching.
- Switching of remote surveillance cameras to single monitor.

**LABORATORY**
- Switching between reference and unknown test circuits.
- Switching with high accuracy of fixed attenuators in and out of circuit.
- Multi-source monitor and test.

**TELEPHONE**
- Elimination of manual patch boards for carrier I.F. switching.
- Standby channel select (matrix type for complex routing).

Whether your need is for SPDT, transfer, or multiposition, whatever your actuator voltage, no matter what RF connector your system employs, Dow-Key has a standard relay or can adapt one in surprisingly short time.

Please call a Dow-Key applications engineer and let him lead you out of the coaxial relay wilderness.

# Kilovac Vacuum Relays

**KILOVAC vacuum relays (ceramic or glass) are specified by design engineers for performance and reliability not available in conventional relays:**

- Ratings to over 100 kV
- Long Life — one million plus operations
- Light Weight — as little as 1 oz.
- Non-oxidizing contacts
- Fast-Operate Time — 10 ms typical
- High Dielectric, smaller size per voltage/current rating

## KILOVAC High Voltage/Medical Relays

Since 1964 Kilovac Corporation has delivered thousands of high voltage relays especially developed for heart defibrillators (both hospital and portable models). DPDT relays (P/N KM-15 and KM-14) are used as "patient" switches; SPST versions (P/N KM-6 and H-4), used for dump/abort safety discharge. Highly qualified application engineering assistance is at your disposal.

## KILOVAC High Voltage Relays Mean . . .

**VACUUM RELAY RELIABILITY** means short contact travel, low contact mass, contacts free of oxides and pitting and minimum contact bounce. These long-life reliability features are made possible only because of operation in a high vacuum dielectric. Vacuum technology has made high reliability, long life high voltage switching practical, with considerable savings in space and weight. Developed for high voltage, high peak current applications, Kilovac relays are well suited and widely used in medical electronics, radar, communications, pulse forming networks, ECM, sonar, antenna switching and antenna couplers, microwave systems and switching in explosive atmospheres. Kilovac's broad line and "Quick Reaction Time" is geared to your most critical delivery schedule. We have the high vacuum experience, design and production capability to provide special modifications of our standard off-the-shelf designs in unbelievably short order.

**HIGH VOLTAGE ISOLATION:** 2000 volts per mil of contact gap with predictable, repeatable isolation well in excess of rated values.

**LOW AND STABLE CONTACT RESISTANCE:** 0.015 ohms typical with no contact oxidation or maintenance.

**FAST SWITCHING TIME:** 10 ms typical, due to small contact gap and short armature travel.

**LONG LIFE:** Millions of cycles with minimum degradation in electrical performance.

Any one of these standard features will justify your selection of KILOVAC vacuum relays. KILOVAC design and years of production experience permits immediate off-the-shelf delivery from a broad product line with voltages up to 100 kV. Special modifications quickly provided.

## Series 400 — REMOTE COAXIAL RELAYS

The Dow-Key Series 400 microwave coaxial relays are designed to meet all requirements for high reliability, high performance, broadband coaxial RF switching. These relays are designed for use with cable and connector sizes of your choice.

Series 400 coaxial relays provide excellent electrical characteristics over frequency ranges of dc to GHz and can be optimized for maximum performance at any narrower band of interest. The relays are designed to provide a wide variety of optional RF and power connectors.

**Kilovac** Vacuum Relays • **Dow-Key** Coaxial Relays

# ...Hz to GHz

**DOW-KEY coaxial relays may provide:**

- Excellent VSWR • Very low insertion loss
- Resistor terminated inputs (optional)
- Vacuum switch elements for high power capacity
- Special contact arrangements to meet isolation loss requirements.
- Auxiliary switches for associated circuit control
- Multitude of connectors and coil voltages

## HOW TO SELECT COAXIAL RELAYS

**DON'T** select precision connectors when the system and/or frequency does not require it.

**DO** specify nominal coil voltage and operating current.

**DO** specify basic function, i.e., SPDT, DPDT, etc., and whether or not external auxiliary contacts are required. If in doubt of function, supply a circuit diagram.

**DO** specify impedance. This is generally 50 ohms but many 50 ohm relays can be used in 75 ohm circuits with negligible discontinuity because electrical length of the relays is short at frequencies normally used at that impedance.

**DO** specify whether or not the unused part of the relay is shorted to ground, not shorted or resistor-terminated and the resistor values.

**DO** specify RF power requirements.

**DON'T** specify higher power than needed.

## WHAT DOW-KEY NEEDS TO KNOW FROM YOU

### CIRCUITS AND LOADS

Many times when relays fail to perform up to specification, it is due to lack of proper consideration of:

A. The VSWR of the load.
B. Required isolation between outputs and how it can be achieved.
C. Peak vs. average power and how phase affects max. voltage and current.
D. Ratings do not include hot switching.

The conditions listed above cannot be generalized, but must be considered unique to each application. It is therefore imperative that we be completely informed when selecting a relay for hot switching.

### OPERATE TIME

Operate time of the relay is primarily a function of the coil power, since it requires in excess of 50% of the total switching time to build up the coil field sufficiently to initiate relay operation. To reduce the relay operate time, various means are available:

A. Increase coil current (power).
B. Apply higher than normal voltage pulse to coil.
C. Lower voltage isolation requirements. (A smaller contact gap permits faster contact transfer time.)

With a combination of the above modifications operate times as fast as 500 microseconds are possible with specific types of relays.

### LIFE (MECHANICAL)

Relay life takes in all the foregoing considerations. It is necessary to define life, usually in terms of end-of-life set of performance parameters. Terms like "Mean Time Between Failure" are frequently meaningless unless failure points are defined, and unless conditions of load, rate of operation, duty cycle, coil power and other parameters are specified. Test data on file indicates typical mechanical life will range in excess of one million cycles of operations.

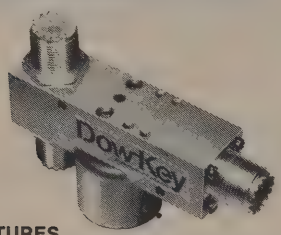
## SERIES 60 SPDT

### REMOTE COAXIAL RELAY



#### FEATURES

The Series 60 are remotely operated, ruggedly constructed, SPDT coaxial relays designed for operation to one kW. They are available with or without two Form C auxiliary contacts. For transmit-receive applications, they are available with a special high-isolation "G" connector at the NC or receive position. The G connector increases the isolation to greater than −100 dB at frequencies up to 500 MHz, but reduces the power rating of the normally-closed connector to 20 watts. G connectors will increase VSWR above 400 MHz. Data given for the Series 60 is applicable only when used in a 50-ohm transmission line. UHF connectors are not recommended above 400 MHz. Standard coils are 12 Vdc (48 ohms), 26 Vdc (245 ohms) and 115 Vac (5000 ohms). Other voltages are available on special order at a slight premium price or in minimum-order quantities.

#### SPECIFICATIONS

Operating Time ..... 25 ms. Max.
Auxiliary Contact Rating ..... 5 Amps., 115 Vac

#### MECHANICAL DATA

Life Expectancy ..... 1,000,000 cycles
Weight ..... 10 oz. Approx.
Finish: R.F. Contacts ..... Gold Plated Fine Silver
Auxiliary Contacts .. Gold Plated Fine Silver

#### CONNECTORS AND PART NUMBERS

| Connector Type | Std. SPDT | With Aux. Contacts | With NC "G" Conn. | With 2C Aux. & NC "G" |
|---|---|---|---|---|
| UHF | 60-XX04 | 60-XX0442 | 60-XX28 | 60-XX2842 |
| N | 60-XX01 | 60-XX0142 | 60-XX25 | 60-XX2542 |

In the above data, the "XX" following the hyphen represents the coil voltage. When ordering, replace the XX with the appropriate coil number, as follows:

22 = 12 Vdc  23 = 26 Vdc  26 = 115 Vac

## COAXIAL SWITCHES

### 78 SERIES MULTI-POSITION TYPES

Manually operated switches with true coaxial switching members (not wafer switches). Useful frequency range 0-500 MHz. RF power rating: 1.5 kW at 50 MHz, 1 kW at 100 through 400 MHz. Impedance: 50 ohms. Body size: 3″ dia. x 1″. Weight: 10 oz.

| Dow-Key Model | Conn. Type | Description |
|---|---|---|
| 78-0204 | UHF | SPDT |
| 78-0304 | UHF | SP 3-Pos. |
| 78-0404 | UHF | SP 4-Pos. |
| 78-0604 | UHF | SP 6-Pos. |
| 78-0302 | BNC | SP 3-Pos. |
| 78-0602 | BNC | SP 6-Pos. |
| 78-0702 | BNC | DPDT |

### 71/72 SERIES MULTI-POSITION TYPES

Weatherproofed high power switches for switching antennas, transmitters or receivers up to 500 MHz. Power rating: 1 kW at 200 MHz, 750 W at 500 MHz. VSWR: 1.06 at 50 MHz, 1.3 at 500 MHz. Impedance: 50 ohms. Body Size: 72 Series, 4″ x 3.5″ x 2.62″; 71 Series, 5.75″ dia. x 2.75″.

| Dow-Key Model | Conn. Type | Description | Coil Volt. |
|---|---|---|---|
| 71-220401 | UHF | 6-Pos. Shorting | 12 Vdc |
| 71-220402 | UHF | 6-Pos. Non-Shorting | 12 Vdc |
| 71-230401 | UHF | 6-Pos. Shorting | 26 Vdc |
| 71-230402 | UHF | 6-Pos. Non-Shorting | 26 Vdc |
| 71-260401 | UHF | 6-Pos. Shorting | 115 Vac |
| 71-260402 | UHF | 6-Pos. Non-Shorting | 115 Vac |
| 72-220401 | UHF | 3-Pos. Shorting | 12 Vdc |
| 72-220402 | UHF | 3-Pos. Non-Shorting | 12 Vdc |
| 72-230401 | UHF | 3-Pos. Shorting | 26 Vdc |
| 72-230402 | UHF | 3-Pos. Non-Shorting | 26 Vdc |
| 72-260401 | UHF | 3-Pos. Shorting | 115 Vac |
| 72-260402 | UHF | 3-Pos. Non-Shorting | 115 Vac |

## COAXIAL RELAYS

### 77 SERIES SPDT TYPES

Medium-size, light weight, low-priced coaxial relays for industrial and military uses. Available with or without one Form C auxiliary contacts. Power rating: 150 W at 50 MHz, 75 W at 1 GHz. Body size: 1.88″ x 0.75″. Weight: 3 oz.

| Dow-Key Model | Conn. Type | Coil Volt. | With 1 Form C Aux. Contacts |
|---|---|---|---|
| 77-2202 | BNC | 12 Vdc | No |
| 77-220232 | BNC | 12 Vdc | Yes |
| 77-2302 | BNC | 26 Vdc | No |
| 77-230232 | BNC | 26 Vdc | Yes |
| 77-2602 | BNC | 115 Vac | No |
| 77-260232 | BNC | 115 Vac | Yes |
| 77-2232 | F | 12 Vdc | No |
| 77-223232 | F | 12 Vdc | Yes |
| 77-2332 | F | 26 Vdc | No |
| 77-233232 | F | 26 Vdc | Yes |
| 77-2632 | F | 115 Vac | No |
| 77-263232 | F | 115 Vac | Yes |

### 260/260B SERIES DPDT TYPES

The 260 Series are standard DPDT relays with six terminals. The 260B Series are by-pass relays with an internal connection between the NC contacts, leaving only four terminals. RF ratings and specifications are the same as 60 Series. Body size: 3″ x 1.75″ x 0.88″. Weight: 12 oz.

| Dow-Key Model | Conn. Type | Coil Volt. | With 2 Form C Aux. Contacts |
|---|---|---|---|
| 260-2204 | UHF | 12 Vdc | No |
| 260-220442 | UHF | 12 Vdc | Yes |
| 260-2304 | UHF | 26 Vdc | No |
| 260-230442 | UHF | 26 Vdc | Yes |
| 260-2604 | UHF | 115 Vac | No |
| 260-260442 | UHF | 115 Vac | Yes |
| 260-2202 | BNC | 12 Vdc | No |
| 260-220242 | BNC | 12 Vdc | Yes |
| 260-2302 | BNC | 26 Vdc | No |
| 260-230242 | BNC | 26 Vdc | Yes |
| 269-2602 | BNC | 115 Vac | No |
| 260-260242 | BNC | 115 Vac | Yes |
| 260B-2304 | UHF | 26 Vdc | No |
| 260B-230442 | UHF | 26 Vdc | Yes |
| 260B-2604 | UHF | 115 Vac | No |
| 260B-260442 | UHF | 115 Vac | Yes |
| 260B-2302 | BNC | 26 Vdc | No |
| 260B-230242 | BNC | 26 Vdc | Yes |
| 260B-2602 | BNC | 115 Vac | No |
| 260B-260242 | BNC | 115 Vac | Yes |

Other coil voltages and connector types are available for Dow-Key relays; contact factory.

## Kilovac CORPORATION . . . small enough to be responsive, large enough to be responsible.

Kilovac Corporation, of which Dow-Key is a division, manufactures a broad line of high-voltage vacuum relays, with voltage ratings up to 100 kV, for use in radio frequency communications, medical instruments, industrial electronics, radar, sonar and space systems.

Kilovac's high vacuum technology has made possible smaller and lighter relays than previously available for high-voltage switching.

Designed for switching radio frequency circuits employing coaxial transmission lines, Dow-Key relays provide high efficiency with low SWR and excellent isolation. The relays are available in a variety of coil voltages and currents, power ratings, connector types and switching modes.

### SPECIALS

These pages cover only the standard, most popular Kilovac/Dow-Key relays. We manufacture many more products than shown, and invite your inquiries.

Kilovac/Dow-Key offers the original equipment manufacturer a diverse background of designing and producing special relays to exacting specifications.

Latching relays, hermetically sealed relays and a wide variety of switching arrangements, non-standard connectors, attached cables of various types (with or without connectors) and special coils are available.

Your inquiries regarding relays designed to your specifications will receive prompt attention from our Engineering and Marketing Departments.

# SUBMINIATURE RELAYS

Leach subminiature relays have set the industry standards for technology and reliability for decades. With their proven high performance in the most demanding applications, they are ideal for your critical subsea, shipboard, ground-based and aerospace applications.

Our Balanced Force™ subminiature relays are rugged, high-environment relays for applications where size, weight and reliability are important. For systems where size and weight are critical, our Series III subminiature relays are the smallest, lightest aircraft relays made with their contact ratings, and are 40% the size and weight of our J and K Series relays, yet offer the same high performance. Both relay types are available in a variety of termination, mounting and operating configurations.

# POWER AND CONTROL RELAYS

Leach power and control relays have been used for decades in commercial and military aircraft, trucks and buses, ships and tanks—any application that calls for proven durability, high performance and long life.

To ensure that you get the right relay for your application, our power and control relays are available in a broad range of configurations. You can choose from various terminal and mounting styles, dust and moisture resistant and hermetically-sealed enclosures, and a variety of operating ratings and characteristics.

# ELECTRONIC TIME DELAYS AND SENSORS

To simplify systems interfacing and integration, we have a complete custom facility for the design and production of timing and sensing systems.

They are available with Leach MIL-Standard relays or special solid state outputs, manufactured with discrete circuitry or thick film hybrids manufactured to MIL-STD-883, Class B requirements.

In addition to the standard products shown below, we can provide:

—Combinations of voltage, frequency and phase sequence detection with built-in time delays for systems monitoring.

—Solid state relays with up to 3PNO contacts and ratings up to 25 amperes to MIL-STD-704 power requirements.

—Relay drivers for multiplex interface and isolation, conforming to MIL-R-28776.

—Solid state switching devices, ac and dc motor controllers, circuit breakers, current sensors and remote power controllers.

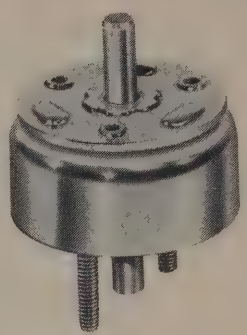
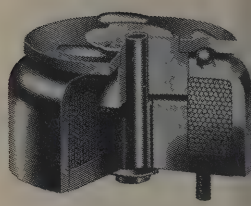
# ROTARY SOLENOIDS

Ledex Rotary Solenoids step, turn, pull, push, index, hammer, punch or trigger—whenever there is a need for fast and dependable direct rotary action. No complicated linkages or circuitry required. They're simple, have superior shock and vibration resistance, high torque over the full stroke. 250 standard models in stock for prototype work, ship in 48 hours. 117 to .09 lb.-in. torque range. Right or left hand strokes available in a variety of degrees.

Write for our complete catalog.





Gross Torque in Pound-Inches by duty cycle for standard rotary strokes

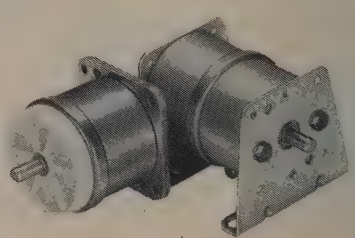
# CUSTOM DESIGNS

Design application assistance, and custom design rotary solenoids are always available from Ledex.

A few examples include:

Special shaft extensions
Special shaft configurations
Subminiature rotary solenoids
Special armature plate contours
Special finishes
Special mountings
Special rotary strokes
Zero axial stroke models
Two coil solenoids

# STEPPING MOTORS—SERIES 50



Extended life stepping motors have a 10 million cycle minimum life on unidirectional models, and in each direction on bidirectional models. 12, 18, 24, and 36 position designs, accurate to ±1° nonaccumulative. High torque-to-size ratios, with breakaway torques to 246 ounce-inches. The exclusive tooth clutch drive yields greater usable torque output, and acts as a built-in electromechanical clutch break for inertia loads. 64 stock models for quick prototype development.

Write for our complete catalog.

| Summary Specifications | Unidirectional | Bidirectional |
|---|---|---|
| Voltage | 6 to 220 VDC | 6 to 220 VDC |
| High temperature | +85°C | +85°C |
| Low temperature | −40°C | −40°C |

# PUSH & PULL SOLENOIDS

You name the job.
Short, medium or long stroke. High speed. Tight space. Unusual load. Ledex has the solenoid for you, usually on the shelf. Expert design assistance for your toughest custom requirements.

Pancake shaped Ledex push/pull solenoids are built for high force to size and fast response. Better than 10ms response. Form factor minimizes size, provides maximum pole face surface for best efficiency. Two types available. Flat face is for short stroke, rapid response. Conical face gives more mid-range punch.

(For detail performance curves, write for our Catalog)

Quality engineered for efficiency and long term dependability, the Ledex long stroke solenoid has a built-in impact cushion pad to absorb energy at the end of the power stroke. For smooth travel and long wear, the solenoid plunger is electroless nickel plated. It rides in a smooth bushing track designed for positive alignment and low friction. Slotted and cross drilled plungers on all stock models simplify load attachment. Off-the-shelf models available for 12, 28 and 100 VDC operations.

# Liberty Controls for Solenoids and

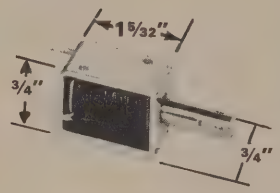
## SOLENOIDS

Liberty Controls Inc. has a full line of both C frame and solid frame solenoids which can be tailored to fit your needs. These shown below are some of the standard lines which cover a variety of applications. Each size is shown as pull solenoids and are complimented by a push type with similar force characteristics. Plungers and plunger stops are made from magnetic steels and annealed after machining for maximum efficiency.

The duty cycle ratings are very important in a solenoid application and continuous duty units should be used whenever possible for safest operation. When the force requirements exceed the capabilities of a continuous rated coil, it is essential to give us complete information regarding the intended duty cycle and power source limitations so that we can design and manufacture the best coil for your application. A good rule of thumb is that if the unit is going to be "on" for four (4) minutes or longer, a continuous duty coil should be used. Let us suggest the appropriate coil for duty cycles less than this four minutes.

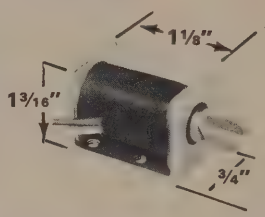
Remember, these solenoids shown are just a few examples of our line, and we encourage you to contact us about your specific requirements.

### TYPE 60



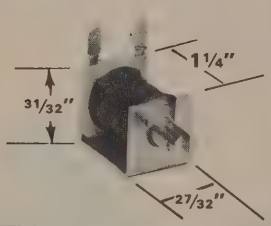
This solid frame solenoid has many light industrial and business machine applications. It is provided with solder, 3/16" quick connect terminals or leads. It has improved efficiency in this small size because it is a solid frame design.

### TYPE 61



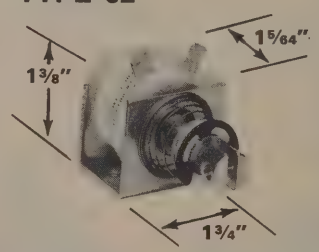
This C frame unit is designed for cost efficiency required in vending machines, slide projectors, automotive actuators and similar applications where volume is high and cost is a prime consideration. It is most often provided with ¼" quick connect terminals, but leads are available.

### TYPE L-24



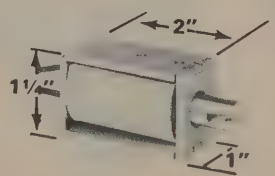
This C frame design is similar to the 61 but slightly larger and is designed for longer life. Its applications fall into the light industrial, business equipment, and calculator areas. It is readily interchangeable with other competitive solenoids and can be provided with several varieties of termination.

### TYPE 62



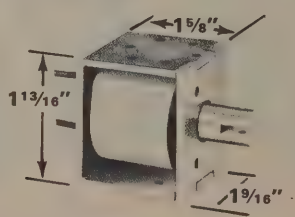
This C frame unit is larger than any of the above described C frames and is used widely in cash drawer applications where a large pull force is required on a pulse duty basis. It is compact and very efficient for this application. Again various terminations are available.

### TYPE 82



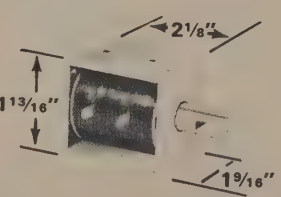
This solid frame solenoid is a medium force unit that has excellent magnetic circuit design. It is used in medium industrial applications where a longer stroke is required. It has been applied in door latch mechanisms and similar applications where side loading is a significant factor. Various terminations are available.

### TYPE 88



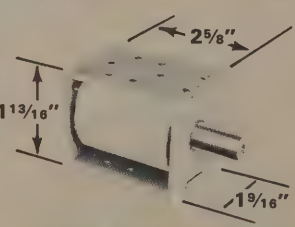
This solid frame unit is the smallest in a series of medium to heavy duty applications. It is used primarily in industrial applications where a short stroke is desired and space requirements are limited. These are used in computer peripheral devices for head loading, write disable indicator retractors, and other similar needs.

### TYPE 89



This solid frame unit is the next stop up from the 88 in longer stroke capabilities. Many of the same applications would apply here as in the 88, but generally the force is required over a slightly longer distance. This unit uses a brass plunger sleeve for longer life and better support in side loaded applications.

### TYPE 90



This solid frame solenoid is the largest of our standard line and is the longest in the 88, 89, 90 Series. As can be seen from the force characteristics curves on the adjacent page, this solenoid has the longest force distance ability. As with the whole series, the various terminations are available.

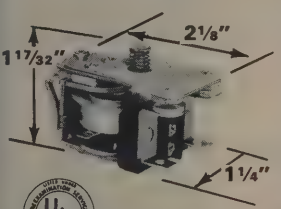
## GENERAL PURPOSE TYPE RELAYS

Liberty Controls has an outstanding reputation for its line of General Purpose Relays. These relays perform dependably in many diverse applications including light to medium switching and plate circuit operations, in process controls and communication equipment. More recently many of these types of relays have been used as safety features on power equipment, such as, line monitoring for stray currents, discharging voltage on shutdown, and equipment shutdown through fault detection.

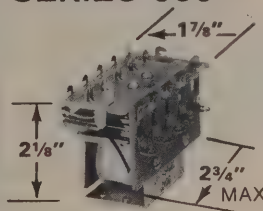
A wide variety of contact arrangements and ratings are available in our general purpose relay family. Minimum contact pressures of 25 grams are maintained on the smaller relays while the larger power relays perform at upwards of 200 grams contact pressure. Standard contacts are made of Silver Cadmium Oxide for low resistance qualities and then gold flashed to prevent corrosion and retard pitting which generally occurs with inductive loads.

### SERIES 250



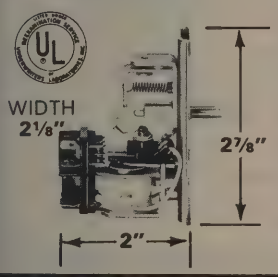
ELECTRICAL CHARACTERISTICS: CONTACTS: Rated at 25 amps @ 120-240 VAC resistive and 1 HP @ 120-240 VAC. ACTION: SPST Normally open, double break. OPERATING VOLTAGES: 6, 12, 24, 115, 203 VAC; 6, 12, 24, 110 VDC. TERMINALS: 1/4" quick connect for contacts, 3/16" quick connect for coil. MOUNTING: Frame drilled and tapped for one (1) 6-32 screw and locating tab. Optional with 5/16" X 6-32 stud and w/o locating tab. SPECIAL: Available with 5 amps SPDT auxiliary switch.

### SERIES 630



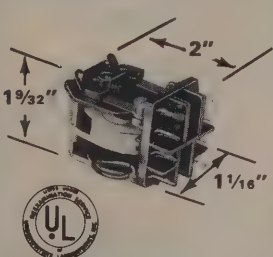
ELECTRICAL CHARACTERISTICS: CONTACTS: Rated at 15 amps. 120V 60 Hz. resistive using gold plated silver contacts as standard. ACTION: DPDT thru 5PDT. OPERATING VOLTAGES: 6, 12, 24, 48, 115, 230 VAC; 3, 6, 12, 24, 48, 110 VDC. TERMINALS: Solder or screw type. MOUNTING: Frame drilled and tapped for four (4) 6-32 screws. SPECIAL: Available in ST normally open or normally closed action. Also provided in 8, 12, and 18 pin Jones Plug or 8, 12 and 20 pin octal type plug.

### SERIES 218



ELECTRICAL CHARACTERISTICS: CONTACTS: Rated at 5 or 10 amps using silver cadmium oxide as standard. ACTION: SPST thru 3PDT. OPERATING VOLTAGES: 6, 12, 24, 115, 230 VAC; 5, 6, 24, 110 VDC. TERMINALS: Combination 3/16" quick connect, or solder, or printed circuit type. MOUNTING: 2 holes 10-32 tapped in front plate as shown or 6-32 tapped hole in base of relay. APPLICATION: This relay is typically used in safety circuits and unit shutdown circuits where a pulse to the coil will operate the relay and then the unit bar to be released manually through the reset button.

### SERIES 210



ELECTRICAL CHARACTERISTICS: CONTACTS: Rated at 5 or 10 amps using silver cadmium oxide as standard. U/L approved. ACTION: SPOT thru 3PDT. OPERATING VOLTAGES: 6, 12, 24, 115, 230 VAC; 6, 12, 24, 110 VDC. TERMINALS: Tab, solder, or printed circuit type. MOUNTING: Frame drilled and tapped for one (1) 6-32 screw and locating tab. Optional with 5/16" X 6-32 stud and w/o locating tab. SPECIAL: Available with SPST normally open or normally closed action. Also available as a manual reset or latching relay. Special plate circuit coils can be provided.

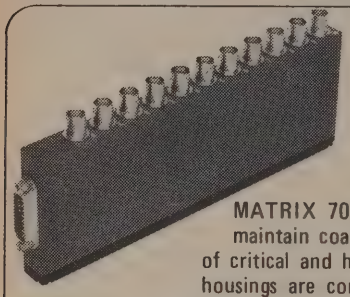
# COAXIAL SWITCH MODULE



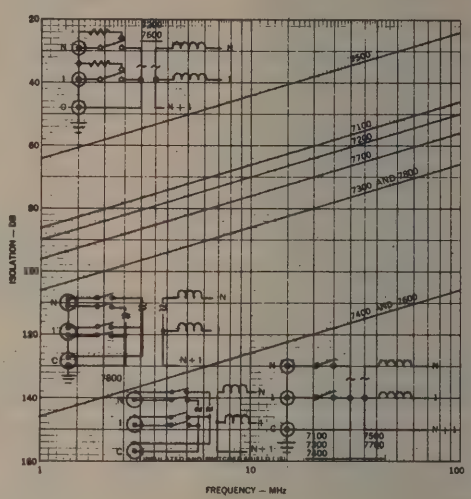
## FEATURES

- Two to twenty throws
- Continuous shield continuity
- Rugged machined aluminum housing
- Crosstalk always less than isolation
- Switchpoints individually field replaceable
- Extremely low EMI
- Low VSWR
- Matrix configuration easily assembled using 9000 series cross straps
- Signal circuits isolated from control circuitry

MATRIX 7000 Series Switch Modules are designed to maintain coaxial switching continuity over a wide range of critical and high environmental applications. The switch housings are constructed on precision machined aluminum alloy for structural integrity and hard anodized for durability. All signal shield paths are silver plated with covers gasketed for maximum EMI protection. The basic reed switch elements are hermetically sealed in nitrogen filled gas envelopes and employ rhodium plated contacts to insure non-stick operation. Applications for MATRIX 7000 Series include:

- R.F. and I.F. switching where a low VSWR is required.
- CCTV, base band video and pulse switching where low phase distortion and high pulse fidelity are required.
- Applications requiring a high degree of shielding integrity and low contact and induced noise such as pre amp input switching or the switching of high impedance operational amplifier inputs.

Matrix and hybrid switching systems are easily constructed by using Series 9000 (no output), 9100 (one output) or 9200 (two output) push-on cross straps which mate with the BNC connectors on the switch modules. The cross strap output connectors are BNC female type UG 1094/U. The model number of the cross strap is assigned by replacing the two zeros of the series number with the number of inputs desired. For example, a Model 9108 has eight inputs and one output.



## SERIES 7000

| | |
|---|---|
| 7100 – | Standard |

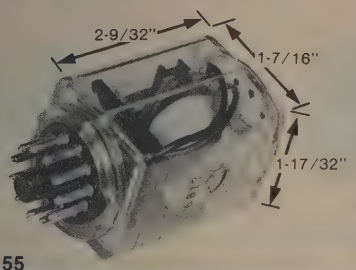
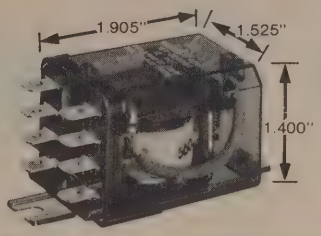
Microinterface Modules
Synchronous Motor Timers



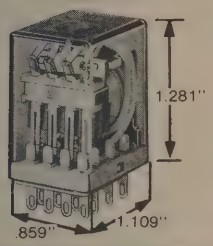
155

An octal plug-in relay available in SPDT, DPDT or 3 PDT with 5 and 10 amp contact ratings. Various coil voltages available also.



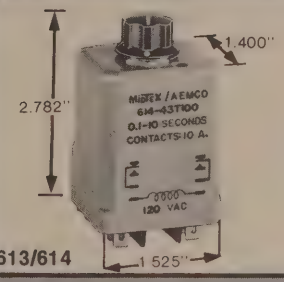
187

DPDT relay rated at 20 amps. Similar in size to the 157 and available with enclosed or open style stud mount. ¼" quick connects.



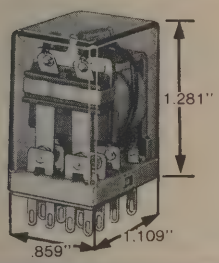
156

4 PDT relay available in 3 and 5 amp. contacts and various coil voltages. Also available in hermetically sealed version.



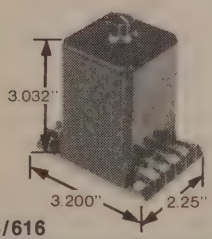
613/614

A DPDT time delay relay utilizing either the 157 or 187. Internal time delay available from 0.1 to 300 Sec.



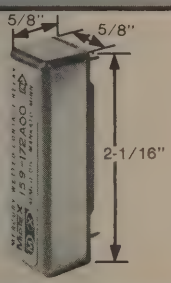
158

A miniature SPDT or DPDT relay available in 5 and 10 amp. contact ratings with various AC and DC coil voltages.



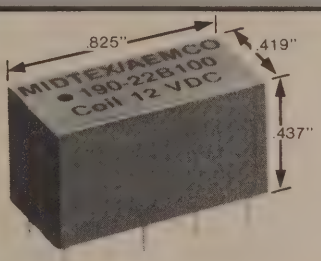
615/616

A DPDT or 3 PDT octal plug-in time delay relay. 10 amps contact rating. 1.0 to 300 Sec. delay of interval are standard options.



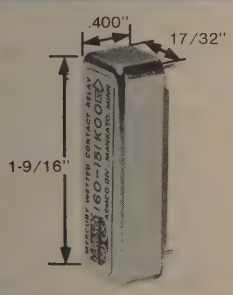
159

A mercury-wetted contact relay with extremely long life. Available with Form C or Form D contacts and various DC voltages.



190

Dual-in-Line Package Power Relay with 2 DPDT gold alloy contacts rated at 2 amps, 28 VDC, or 120 VAC, resistive. Excellent low level switching performance.



160

Similar to the 159 relay but smaller in size, this relay has extremely long life and is available with Form C or Form D contacts and various DC voltages.

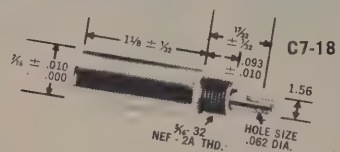
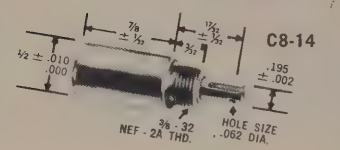
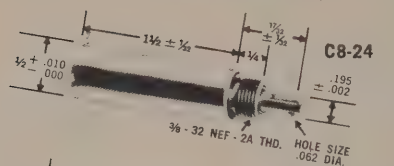
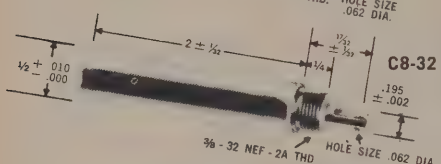
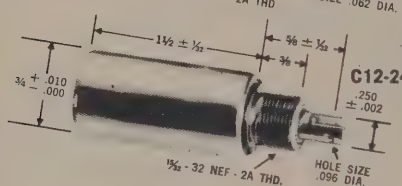
# TUBULAR SOLENOIDS

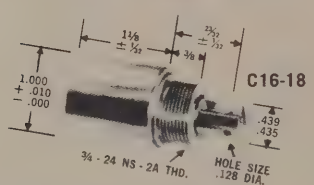


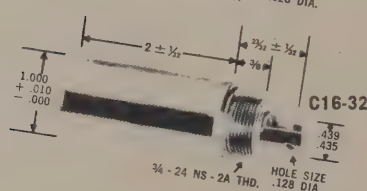


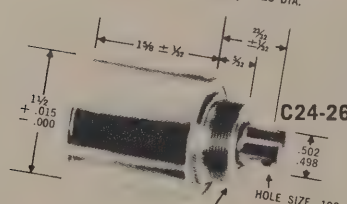


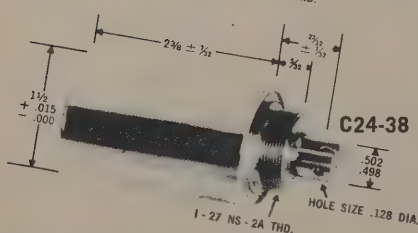












## NINE SIZES—PRECISION BUILT USING HIGH-GRADE STEEL IN ALL PARTS OF THE MAGNETIC CIRCUIT

They mount conveniently — only a single hole required. Complete with nut and lockwasher.

## DESIGNED FOR A VARIETY OF APPLICATIONS IN:

- Card-punch Machines
- Tape Recorders (Industrial Control)
- Impacting Devices
- Typesetting Machines
- Cash Registers
- Money Changer Machines
- Sorting Machines
- Reproduction (Copy Equipment)
- Phototype Machines
- Food, Materials Process Control
- Packaging Machines
- Data Processing and Peripheral equipment

# BOX FRAME SOLENOIDS

## 3/16" COIL TERMINALS STANDARD. LEADS AVAILABLE ON REQUEST

Oak box frame solenoids use high grade steel in all parts of the magnetic circuit. Carefully controlled annealing, after all machining operations are completed, assures maximum efficiency. The frame is dovetailed and staked to the end plate, adding mechanical strength and increasing the performance of the magnetic circuit. Plungers and plunger stops, which are made of annealed and specially processed steel, are available in three standard types for specific operating requirements.

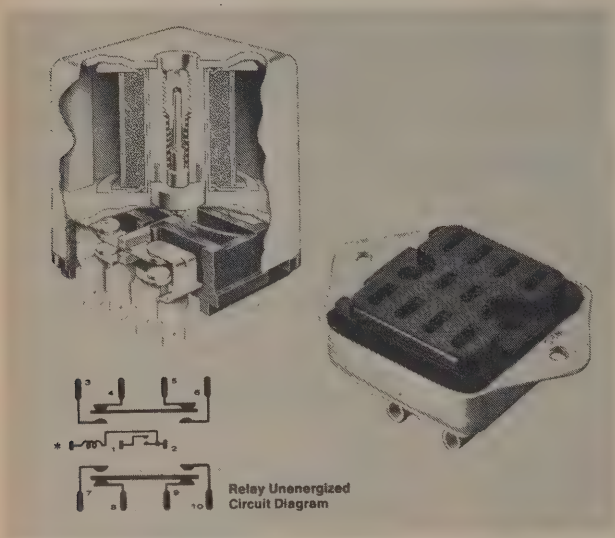
# TYPE W POWER/LOW LEVEL RELAYS



## GENERAL DESCRIPTION:

The Series W is patented, U.S. patent #2907848, and is available with socket for plug-in applications or for use without socket with standard quick-connect terminals for simplicity and ease in wiring. Rated for 1 and 2 HP motor loads, it offers high quality, dependable performance and long life. These relays are ideal for use in copy machines, appliances, automation equipment, motor starting and heater circuits, clock controlled systems, laundry equipment, vending machines, machine tools, furnace controls, panel boards and air conditioners. Not recommended for use in switching loads less than 10% of the A.C. contact rating. For applications below this level use low level contact or a combination of low and power contacts. (On combination low level and power contacts, low level contacts are numbered 3, 4, 5 and 6 on switch.)

## TO ORDER SHOW THE FOLLOWING:

W(H)* U L† 115 A 3 (R) ___

- W(H)* — Type
- U — UL Recognized
- L† — Low-Level Contact
- 115 — Nominal Voltage
- A — D-DC Volts or A-AC Volts
- 3 — Mounting Type (See Description below)
- (R) — Denotes Internal Rectification Option
- ___ — State Any Special Features Required

* Denotes holding circuit option
† Omit for Power Level Contacts

## SPECIFICATIONS

**CONTACT ARRANGEMENT:** 2 X's, 2 Y's, 2 Z's or 1 X, 1 Y, 1Z and combinations thereof

**CONTACT MATERIAL:** Silver (Standard) Silver Cadmium Oxide or Gold Plated (Optional)

**LIFE EXPECTANCY AND CONTACT RATING:** Based upon 10% duty cycle 1 Sec. ON, 9 Sec. OFF

**POWER LEVEL:** 10,000,000 Mechanical
100,000 Min. at the following electrical loads —
25 Amps Resistive at 120 VAC or 277 VAC
25 Amps Inductive at 120 VAC @ .75 P.F.
25 Amps Resistive at 28 VDC
12.5 Amps Inductive at 277 VAC @ .75 P.F.
1 H.P. 120 VAC (96 Amps Locked Rotor 60 Hz)
2 H.P. 277 VAC (72 Amps Locked Rotor 60 Hz)

**LOW LEVEL:** 10,000,000 Mechanical
1,000,000 —
7 Amps Resistive @ 120 VAC
5 Amps Resistive @ 24 VDC
500,000 —
10 Amps Resistive @ 120 VAC
7 Amps Resistive @ 24 VDC
3 Amps Inductive at 120 VAC @ .50 P.F.
100,000 Min. —
⅛ H.P. 120 VAC (22.8 Amps Locked Rotor 60 Hz)
⅛ H.P. 277 VAC (11.4) Amps Locked Rotor 60 Hz)
2,000,000 Min. —
10 Ma. @ 120 VAC
50 Ma @ 24 VDC

**AMBIENT TEMPERATURE:** −55°C to +40°C

**TERMINALS:** Spade type — ¼" x .032 standard

**MOUNTING:** Stud or panel

**DIELECTRIC STRENGTH:** 1500 Volts RMS

**INSULATION RESISTANCE:** 100 megohms minimum

**OPERATING VOLTAGE:** (at 25 C) D.C. — 75% of Nominal; A.C. — 85% of Nominal

**OPERATE & RELEASE TIME:** 25 ms Nominal

**COIL DISSIPATION (APPROX.):** D.C. — 2.5W; A.C. — 7.5 VA (inrush 15 VA)

## STANDARD PART NUMBERS AVAILABLE THROUGH OAK DISTRIBUTORS

| Part No. | Coil Nominal Volts | Coil Ohms | Mounting | Socket Type |

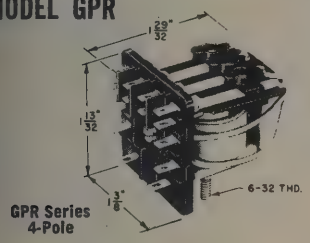
# OHMITE® electro-mechanical relays

## MODEL GPR

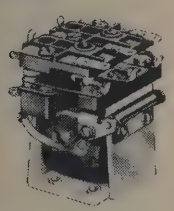


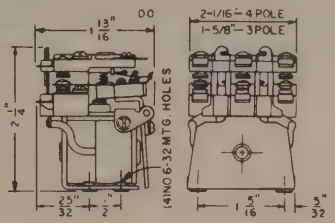
GPR Series 4-Pole

For Octal Plug GPR Series

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connection and mounting.

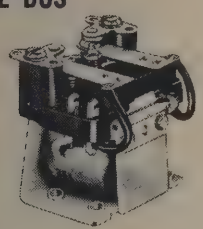
## MODEL DO

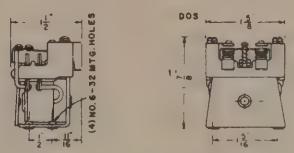




Particularly adaptable to aircraft and mobile equipment applications where severe shock and vibration are encountered. Design of molded parts around contact arms protects against mechanical injury. Stocked in 3-pole or 4-pole type, and also in hermetic enclosures and in latching types.

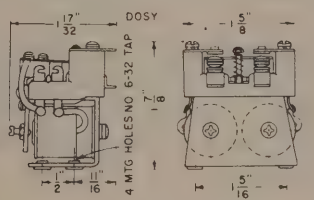
## MODEL DOS





Wide application, general purpose relay, compact and lightweight. Handles loads usually demanded of much larger relays. Meets rigorous aircraft relay standards.

## SENSITIVE MODEL DOSY



Similar in construction to Model DOS relay but equipped with twin coils for increased sensitivity. The DOSY relay is adaptable to a wide range of electronic control applications such as plate circuit controls, or as overload or underload controls in D.C. circuits to signal attainment of predetermined current levels.

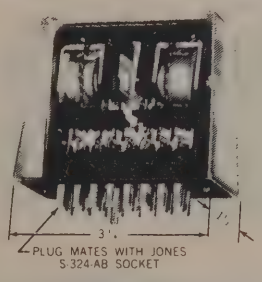
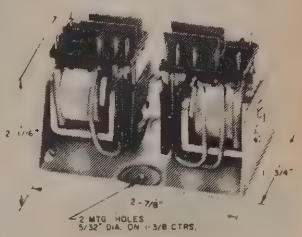
## MODEL GPR LATCHING RELAYS



Enclosed Latching Relay

Relay 6PDT Latching



Latching relays consist of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current.

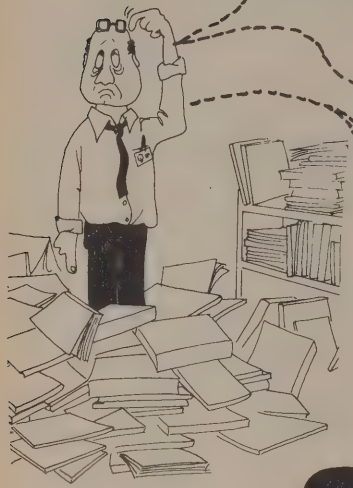
***What can I use to keep all the manufacturers' product data I receive in order?***

***What system makes filing or retrieving manufacturers' catalogs fast and easy?***



***Which file system have thousands of engineers purchased because they know it works?***

# eem FILE SYSTEM

## THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

**Here's how to order your eem FILE SYSTEM:**

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

# The low cost R50 switches up to 5 amps, is immersion cleanable.

**R50-Y1 and Y2** relays seat .425" high for use on printed circuit boards spaced as close together as 0.6" center-to-center. Nominal pick-up power for R50-Y1 is 330 mW DC; for the R50S-Y1, 160 mW DC; for the R50-Y2, 410 mW DC; for the R50S-Y2, 290 mW DC; and for the R50-X1 from 450 to 562 mW DC. Pickup is approximately 75% of rated coil voltage. Dropout is 5% minimum. All models have gold-plated pc terminals spaced on a 0.1" grid. Contact life expectancy at rated load is 500,000 operations, minimum. All models are U/L recognized.

Contact rating: R50, 2 amps @ 28V DC or 1 amp @ 120 AC resistive. R50S, 1 amp @ 28V DC or 0.5 amp @ 120V AC resistive. R50-X1, 5 amps @ 28V DC or 2.5 amps @ 120V AC resistive. Approximate weight: R50-Y1, 0.3 oz.; R50-Y2 and R50-X1, 0.5 oz.

The polyester cover of the R50 is bonded to the relay base, but is not hermetically sealed. Therefore, if the board on which the relay is soldered is to be cleaned by immersion, cleaning time must not exceed two minutes. If fluorocarbons, chlorinated or hydrocarbon cleaning solutions are used, the temperature of the solution must not exceed 77° C. If aqueous-organic solutions are used, temperature must not exceed 82°C. After board cleaning, the knock-off nib on top of the case must be removed.

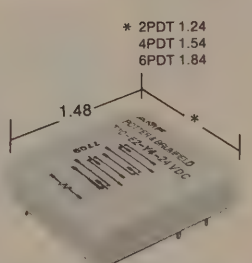
NEW

# Immersion cleanable T10 relays feature 3 amp permissive-make contacts. And they are TTL buffer compatible.

**T10** is a DC operated relay only .425" high, allowing printed circuit boards to be mounted on 0.6" centers. It has permissive-make contacts noted for low bounce and long life. Operate and release times are each 15 ms, including bounce. Suffix "Y" denotes gold-clad silver, single-button contacts rated to 3 amps @ 28V DC or 120V AC, resistive. Suffix "Z" denotes gold-clad silver, bifurcated contacts rated from low level to 1 amp @ 60V DC or 120V AC, resistive. A polyester cover snaps in place over the relay to keep out dust and other contaminates.

All models have UL Recognition under file 46750. Weight is approximately 1.06 oz.

The polyester cover of the T10 is bonded to the relay base, but is not hermetically sealed. Therefore, if the board on which the relay is soldered is to be cleaned by immersion, cleaning time must not exceed two minutes. If fluorocarbons, chlorinated or hydrocarbon cleaning solutions are used, the temperature of the solution must not exceed 77°C. If aqueous-organic solutions are used, temperature must not exceed 82°C. After board cleaning, the knock-off nib on top of the case must be removed.



SEATED HEIGHT .425 MAX.

## POTTER & BRUMFIELD RELAYS

# The R10, our compact multi-purpose relay, is available to 8 poles from dry circuit to 10 amps. Many models Logic IC compatible.

**R10 SERIES** relays are UL recognized under File E42810 and E46750. Models to 6PDT have CSA recognition. Contact life expectancy for all series is 10 million operations, mechanical. Wiring connections should be made so that opposite polarity is not developed between adjacent contacts. Initial breakdown voltage of the gaps between contacts is 1,000 V rms; 500 V rms between "Z" (bifurcated) contacts. Contact ratings shown are for use at 28V DC or 115V AC, resistive. Maximum current is shown in parenthesis. "E1" relays have .012" x .080 x .210" long solder terminals with #3-48 mounting stud. "V" relays are DC voltage actuated. Pickup is approximately 75% of rated coil voltage. Dropout is 10% minimum. "J" relays are current actuated (DC). Maximum pickup is listed in "Input" column. "SS" relays are sensitive DC voltage actuated. Maximum pickup power of SPDT R10 — SS1.0K and — SS220 is 20 mW DC @ 25° C. Weight is 0.8 to 1.4 oz.

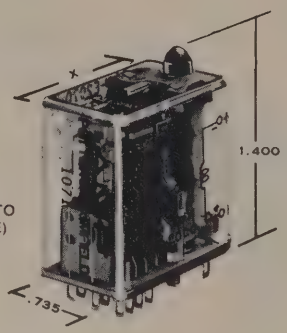
# POTTER & BRUMFIELD RELAYS

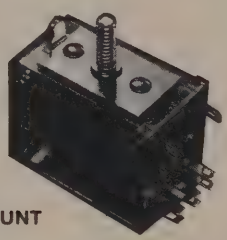
**R10L SERIES** Has a light emitting diode (LED) indicator. LED produces highly visible red light when relay coil is energized. Especially useful when troubleshooting an instrument, equipment, or system. LED has long operating life and high reliability. Other operating characteristics same as standard R10 Series relays. LED is available on relays with coils up to 48 volts DC. Relays fit standard R10 Series sockets.

Note: Observe polarity indicated when wiring R10L- with LED.



X = FROM .95 (2 POLE) TO 1.580 MAX. (8 POLE)

**R10-E6** is a standard R10-E1 (solder terminals) fitted with a bracket on the narrow side of its case for chassis mounting. The bracket has one #6-32 x .375" stud and one locating tab on .437" centers.



**R10 E6 BRACKET MOUNT**

# POTTER & BRUMFIELD RELAYS

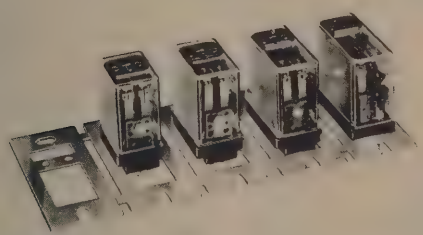
## R10 sockets for chassis, PC board, strip or panel mounting multiply your design options.

**MOUNTING STRIP FOR R10-R15 RELAYS**
Contains ten pre-punched break-away mounting plates stamped from .064" aluminum. Designed to simplify mounting one or more R10, R12, R13, R14, or R15 relays on chassis or racks. Each individual plat accepts a 2, 4, 6, or 8 pole solder terminal relay or socket.

When a socket is used, it is held in place by one #3-48 screw and nut in the hole provided. Or, the relay may be mounted without a socket by inserting its mounting stud through the hole in the plate and fastening a #3-48 nut on relay stud.

Single plates may be mounted over a rectangular hole measuring 1.62" x .750" maximum or a 1.62" round hole.

For rack or panel installation, the entire 10 piece strip (approx. 12" long) may be mounted.
Reinforcing of the strip may be required depending on the number of plates used and the particular mounting circumstances.



R10 Mounting Strip

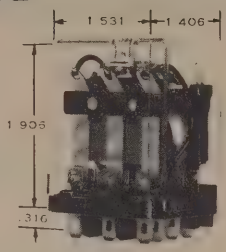
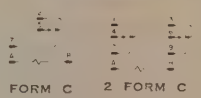
# POTTER & BRUMFIELD RELAYS

## Switch loads to 10 amps, 150V DC or 15 amps, 277V AC

**KU series** relays are UL Recognized under File E22575 and CSA Listed (except KUE models) under File 15734. A "1" preceding the suffix, such as KUEP3D15, denotes a standard model. A "2" denotes a model having a push-to-test button for manually actuating the contacts to check the load circuit. A "3" denotes a highly visible neon lamp which indicates the presence of coil power. A "4" denotes both button and lamp. Models with a "5" have neither button nor lamp, and have two flanges as shown, right, for mounting. All models have .187" quick connect/solder terminals. Except for the flange-mount model, all may be mounted into the sockets below.





Contact life expectancy of all models is 10 million operations, mechanical, and 100,000 operations at full load. At loads of less than maximum rating, life expectancy rises accordingly.

### CONTACT RATINGS (UL)

**KUP Series, all models:** 5amps, 28V DC/240V AC, 80% PF. 1/10 HP, 120V AC; ¼ HP, 240V AC.

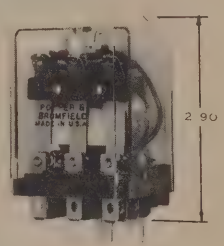
**KUP Series:**

**1 and 2 pole models:** 10 amps, 28V DC/240V AC, 80% PF. ¼ HP, 120V AC; ⅓ HP, 240V AC.

**3 pole models:** 10 amps, 120V AC, 80% PF. 6⅔ amps, 240V AC, 80% PF.

**KUMP Series, all models:** Same as above. Also, 15 amps, 277V AC, 80% PF.

**KUEP models:** 10 amps, 150V DC.



### SOCKETS FOR KUP-KUMP RELAYS

For mounting KUP-KUMP plain case, KUA, KUL, and KUR RELAYS; CL and CU time delays. All sockets are UL Recognized for 10 amps at 240V AC.

SPDT/DPDT/3PDT pierced solder terminal socket rated 10 amps. Molded nylon; has two .165" dia. mounting holes.

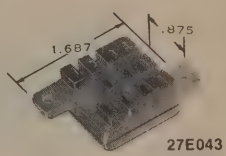
**27E043** **LIST $1.00**

SPDT/DPDT/3PDT printed circuit terminal, 10 amp socket accepts .187" relay terminals. Molded nylon; has two .165" dia. mounting holes.

**27E046** **LIST $1.17**

SPDT/DPDT/3PDT .187" quick-connect terminal socket rated 10 amps. Molded nylon; has two .187" dia. mounting holes.

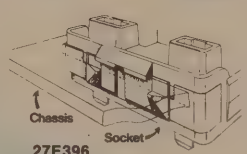
**27E067** **LIST $1.55**



**27E043**
**27E046**
**27E067**

Hold-down spring will accommodate machine screws or rivets.

**20C228** **LIST $ .22**

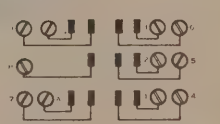


**27E396**
**27E400**

NEW

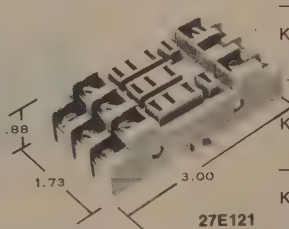
SPDT/DPDT/3PDT snap-in sockets require no mounting screws or retainer spring. 27E396 has .187" quick-connect termination; 27E400, solder-eyelet termination.

**27E396** **LIST $1.55**
**27E400** **LIST $1.00**



SPDT/DPDT/3PDT screw terminal socket rated 10 amps. Molded polycarbonate; accepts .187" relay terminals; mounting slots accept #6 screws. For track mount, see pg. 12.

**27E121** **LIST $4.95**



**27E121**

NEW

### MOUNTING STRIP

37D632 will mount 6 KU sockets (except 27E121) in aluminum strip 11.9" x 3.00" x .062".

**37D632** (not shown**) **LIST $1.09**

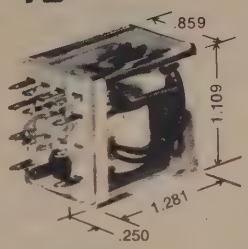
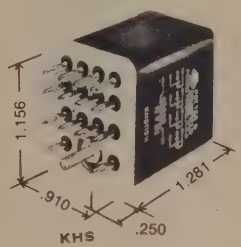
# KH series relays switch to eight circuits from low level to 3 amps in little more than one cubic inch.

**KHU/KHS SERIES** small, rugged 4PDT relays are available for AC or DC operation. KHU relays are recognized under the Component Program of UL and CSA. KHU has clear polycarbonate dust cover; KHS is hermetically sealed in metal enclosure. Relays are designed to meet exqcting requirements of data processing, computer and process control applications. Various contacts available: suffix "1" denotes gold-flashed silver rated 3 amps @ 30V DC or 120V AC, resistive; suffix "2" denotes silver-cadmium oxide rated 3 amperes; suffix "3" indicates gold alloy contacts for low level to 1.0 amp applications; suffix "6" indicates gold overlay on silver, bifuracted contacts rated 1 amp @ 30V DC, resistive, or 120V AC. Suffix "N" denotes a neon lamp in parallel with the coil to provide visual indication that power is reaching the coil. Mounting: Solder terminals with No. 3–48 stud .312" long. All relays fit sockets (below) with printed circuit or solder lug terminals. Weight without sockets: KHU 1.12 oz.; KHS 1.63 oz.

NOTE, KHS RELAYS SHOULD NOT HAVE FRAMES GROUNDED WITHOUT CONSULTING FACTORY FOR LOAD LEVELS.



KHU



KHS

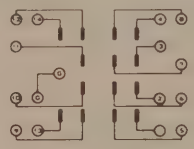
Hold-down spring.

**20C217** **LIST $ .15**

4PDT screw terminal socket rated 5 amperes. No hold-down spring required. For track mount, see pg. 12.

**27E166** **LIST $7.57**

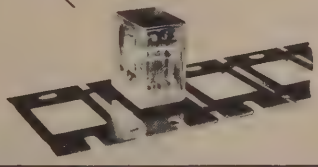


### MOUNTING STRIP

NEW

37D633 will mount 16 KH sockets (except 27E166) in two lengths of aluminum strip, each measuring 10.9" x 2.25" x .062.

**37D633** **LIST $ .93**



# BU buzzer provides dependable 120 Hz signal source.

**BU BUZZER** AC operated coil with a spring steel armature which buzzes when coil is energized. Used extensively in test equipment, laboratories and a host of other applications where a small light weight, dependable buzzer is required. Recognized under the Component Program of Underwriters' Laboratories Inc. File No. 51154 and CSA File No. 26606. Weight: 1⅝ ozs. Mounting: No. 6-32 tapped core.

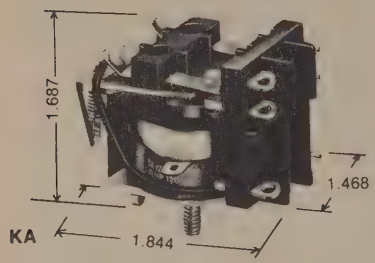
# POTTER & BRUMFIELD RELAYS

**KA and KAP SERIES** Small, low cost, highly efficient general purpose relays for handling light power loads such as small motors, solenoids and other relays, and general automation work. All KA and KAP relays have CSA listing (File No. LR-15734) and carry U/L component recognition (File No. E22575). Mechanical life expectancy: 10 million operations. Duty: Continuous. Contact rating: suffix AG and DG, 10 amps @ 120 VAC or 6 amps @ 240 VAC; suffix AY and DY, 5 amps @ 120 VAC or 3 amps @ 240 VAC. "G" suffix indicates silver-cadmium oxide.



The KA is the open version of this series. Mounting: One No. 6–32 threaded stud and locating tab on .438 centers. Wt: 2 ozs. The KAP is the enclosed model and is protected by a clear polycarbonate dust cover. Terminals: 8 or 11-pin plug. Weight: 3 ozs.

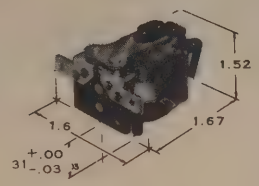
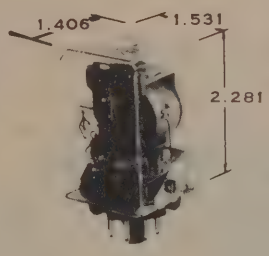
# POTTER & BRUMFIELD RELAYS

**KR3-H SERIES** Ruggedly constructed but of small size, KR3-H is a heavy duty relay especially designed for applications where limited space is a factor. Its heavy duty copper-alloy movable contact carrier has twin silver-cadmium oxide contacts rated 20 amps @ 120V AC 60 Hz, resistive, or 28V DC; 1 HP 120/240V 60 Hz. Contact arrangement is 1 Form X (SPST-NO-DM) only. Terminals: suitable for .250" quick connect, also solder; for contacts: solder only for coil. Size: 1.6" x 1.671" x 1.52". Seated height: 1.21". Mounting: One No. 6-32 stud and locating tab on .437" center. Weight: 2 ozs.

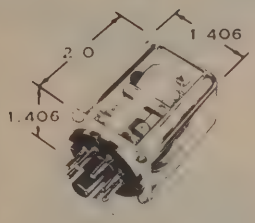


**KRP3-H SERIES** All electrical specifications listed above for the KR3-H series relays apply to the KRP3-H. However, the KRP3-H is enclosed in a clear polycarbonate dust cover and features an octal plug-in base. Weight: Approximately 3 ozs.

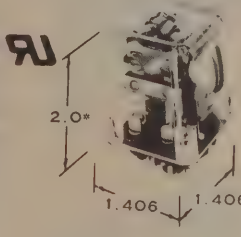


**KRP3-H Hold-Down Spring**
Hold-down spring will accommodate machine screws or rivets.
**20C206** **LIST $ .20**

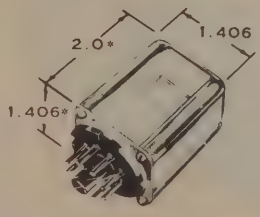
**KR11-E and KR14-E SERIES** Hermetically sealed in a metal can. Has octal-type plug and gold-flashed silver contacts rated 5 amps @ 120V AC, 80% P.F., or 28V DC, resistive. Suffix "G" denotes silver cadmium oxide contacts rated 10 amps @ 120V AC, 80% P.F., or 28V DC, resistive.



**KRP SERIES** Versatile, multi-contact arrangement. Enclosed in a clear polycarbonate dust cover. Standard 8-pin octal-type plug for KRP5 and KRP11, 11-pin for KRP-14. Weight: Approx. 3 ozs. Contacts: 5 amp, Gold flashed silver, 10 amp silver-cadmium oxide. See KCP-KRP hold-down spring for special mounting applications. See KRP-N indicator lamp relay for current monitoring applications.



**KRP-N** INDICATOR
**LAMP RELAY** A general purpose relay incorporating a lamp to indicate current or voltage availability in power circuit. Contacts: Silver-cadmium oxide rated 10 amps. Enclosures: Clear, polycarbonate dust cover. Mounting: Standard octal plug.
Weight: Approximately 3 ozs.
Hold-down spring (Please see Page 9).



**"P" Case** is a clear polycarbonate case for mounting rectifiers, capacitors, resistors or other components. Octal type termination. 8 pin, 35D070. 11 pin, 35D072. Comes with four screws. Weight: 0.5 oz.
**35D070** **LIST $.88**
**35D072** **LIST $1.06**

Hold-down spring for "P" Case, and KRP series relays will accommodate machine screws or rivets.
**20C176** **LIST $.22**

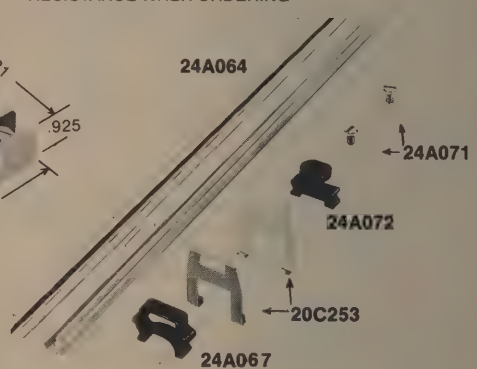
SPECIFY COIL VOLTAGE OR RESISTANCE WHEN ORDERING



TRACK MOUNT SYSTEM

**HP SERIES** is recommended for applications such as TV cameras, dictating machines, desk top computers, copying machines, etc. Contacts are rated 0.3–2 amps @ 28 VDC, resistive; 0.1–0.5 amp @ 120 VAC @ 25°C. Circuit board or socket mounting. Encased in a nylon heat-sealed (non-hermetic) cover. Terminals on a .2″ grid. Weight: .25 oz.

**HPS SERIES** Hermetically sealed HP above. HPS is designed for reliable performance in logic circuits or where prolonged submersion of pc boards in cleaning solvents may be required. Recommended for use in applications requiring more critical specifications than HP relay provides. HP socket may be used for mounting. Sealed metal enclosed relay weighs .25 oz.

### HP SERIES SOCKETS

(For HP, HPS and HCM relays)
DPDT solder terminal sockets 27E062 and socket retainer 24A051.

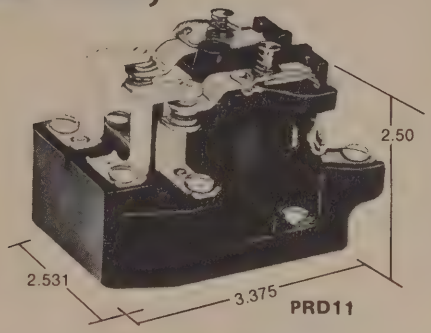
# America's most popular 30-amp relay improved three ways! Supported terminals, enclosed coil, tough phenolic base.



### Direct replacement for famous PR Series

The PRD is a UL-CSA listed, heavy duty power relay designed for high inrush current applications such as motor starting and incandescent lamp loads. This relay is an improved design of our PR Series. It has reinforced screw terminals which virtually eliminates the risk of terminal breakage when the relay is installed. Also, the coil of the PRD is housed in a protective plastic enclosure to minimize the possibility of damage to the coil.

Model for model, PRD is directly interchangeable with the PR. For example, a PRD7AYO replaces a PR7AYO; same size, mounting holes, and electrical characteristics. PRD has a life expectancy of 100,000 operations at full load. Contact life increases when operated at reduced loads or with appropriate arc suppression. The floating movable contact carrier provides excellent pressure and wipe between contact surfaces, thus keeping voltage drop to a minimum between mating contacts.

**Model PRDA11AYA** has a miniature snap-action switch with SPDT contacts rated 5 amps at 120V AC. All models mount using two .188" dia. holes on 1.875" centers.

Weight is 11 oz. maximum. For relay enclosure, see PRD Dust Cover on next page.

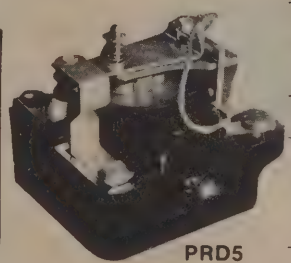
**CSA File 15734**

PRD3



PRD5

**PRD IS IC LOGIC COMPATIBLE**
PRD relays with 12V DC or 24V DC coils are compatible with IC drivers used to terminate logic boards. The 12V DC coil requires 170 mA; the 24V DC coil, just 84mA. When being driven directly by an IC such as TTL or CMOS with driver, the coil of the PRD must be paralleled with signal diode to allow coil back-emf to recirculate through the coil.

**PRD RELAYS LISTED BY UL AND CSA**

| Type | Suffix | | Contact Rating |
|---|---|---|---|
| | AC | DC | |
| PRD 1, 3, or 5 | AY | DY | 25 amps @ 277 V AC, resistive, 1 hp @ 120/240 V AC |
| PRD 7 or 11 | AY | DY | 25 amps @ 240 V AC, 20 amps @ 277 V AC, resistive, 1 hp @ 120/240 V AC. |
| PRD 7 or 11 | AG | | 30 amps @ 240 V AC, 20 amps @ 277 V AC, resistive, 1 hp @ 120/240 V AC, 10 amps @ 600 V AC, resistive. |

# POTTER & BRUMFIELD RELAYS

**PM SERIES** A compact 4PDT power relay for polyphase and heavy duty switching applications. Screw terminals. (PMT has .250" quick-connect terminals.) Has silver-cadmium oxide contacts rated at 25 amps at 240V, 50/60 Hz resistive AC, 1 HP per movable arm at 120V or 240V, AC single phase, U/L (File No. E22575) and CSA listed. Mounts by one front key-hole and two rear channel slots for 8-32 screws on 2" x 2.5" triangular centers. Weight: 14 ozs.

**AB and ABC SERIES** are UL/CSA recognized. For applications requiring long life and quiet operation. Available for AC and DC operation, these relays have a mechanical life expectancy in excess of three million operations. All models have silver contacts and .250" quick-connect terminals. Screw terminal adaptors are available. AB is open; ABC is enclosed in a non-hermetic, heavy metal dust cover. Contact rating: "H" style contacts, 15 amps @ 277 VAC, ¾ H.P., 120/250 VAC; "Y" style contacts, 10 amps @ 120 VAC, or 5 amps @ 240 VAC resistive. Mounting: AB, two 8-32 tapped holes on 1.250" centers. ABC, one ⅜" x 8-32 metal stud and locating tab on .562" centers. Approximate weight: AB, 5 oz.; ABC, 7 oz.

## Our Lowest Cost 20 Amp Power Relay

S87R is a low cost, UL Recognized relay for use in vending machines, washing machines, machine-tool control systems, heating and air conditioning systems, and automated conveyor systems. Its contacts are rated 20 amps, 277V AC; 60 LRA, 12 FLA, 1 HP @ 125V AC; 48 LRA, 8 FLA, 2 HP @ 250V AC; pilot duty, 360VA, 125/250V AC.

Life expectancy is 50,000 operations at full load; 1 million operations, mechanical. Operating temperature range is —45°C to +65°C. Mounting is by one .166" dia. mounting hole and .160" dia. boss. Termination is .250" quick-connect.

# The industry's broadest line of time delay relays and timing modules!

**THE CD SERIES** is available in delay on operate or release for use with an external relay. There are four cases styles: The CD-21 is designed for use with an external KRP relay. The CD-31 is designed for use with an external KHP relay. The CD-38 has an internal 10 amp DPDT relay and the CD-45 is designed for use with an external PRD relay.

**Tolerance:** ± 5%. For Knob Adj. versions see Dial Scale. Res. Adj. (low end): Min. specified or less. (For AC units add ± ½ cycle 60 Hz.)
**Delta Time:** ± 5%. (For AC units add ± 1 cycle 60 Hz.)
**Repeatability:** ± 1% for 38 style. All others ± 2% (For AC units add ± 1 cycle 60 Hz.)
**Temperature Range:** Operating: — 40°C to + 55°C.
Storage: — 55°C to + 85°C.
**Dial Scale:** Time in seconds, calibrated:

| Setting | Tolerance* |
|---|---|
| Maximum | ± 5% of specified maximum |
| Minimum | Specified minimum or less |
| Other | ± 10% full scale |

**Release Time:** 45 milliseconds typical; 60 milliseconds maximum.
**Recycle Time:** Less than 60 milliseconds for CD-38 units (internal shorting contact); 2.0 seconds for CD-21, CD-31, and CD-45 units (no shorting contact).
**Transient Protection:** 1000V, all 120V AC units except CD-31 style.
**Polarity Protection:** Yes.
**Timing Cycle Interrupt Transfer:** None.
**Weight:** CD-21, 4.3oz.; CD-31, 2oz.; CD-38, 8oz.; CD-45, 9oz.

# POTTER & BRUMFIELD RELAYS

## CG SERIES

CG Series relays are available in time delay on operate, or interval on. They feature a C/MOS integrated circuit controlling a DPDT relay having contacts rated 10 amps @ 120V AC, or 5 amps @ 240V AC resistive. Repeatability, including first cycle of operation, is typically .01% for DC units, and 0.1% for AC units. The delay time provided by the IC network is not normally affected by voltage transients encountered in industrial applications. The relay contacts will not transfer if timing cycle is momentarily interrupted. Weight is approximately 8 ozs.

**Repeatability** (including first cycle of operation): AC: 0.1% typical, ±0.5% maximum, but not less than ±16 msec. DC: 0.05% typical; ±.1% maximum, but not less than ±3 msec.
**Tolerance:** +10% —0% of max. specified at high end. +0% —10% of min. specified at low end.
Not less than ±16 ms for AC units and ±10 ms for DC, all units.
**Dial Scale:** In seconds or minutes, reference only.
**Delta Time:** ±2% typical, ±5% max.
**Temperature Range:** Operating; —10°C to +55°C.
Storage; —40°C to +85°C.
**Release Time:** 30 ms typical, 45 ms maximum.
**Recycle Time:** AC: ms typical; 60 ms maximum.
DC: 30 ms typical; 45 ms maximum.
**Transient Protection:** 1,000V on all 120 & 240 VAC units
**Polarity Protection:** Yes.
**Timing Cycle Interrupt Transfer:** None.
**Weight:** Approximately 8 oz. (226.64 gm.)

**NOTE: See page 38 for Socket Ordering Information and explanation of timing functions and notes**

## CH SERIES

The CH series is intended for a wide range of industrial applications where economy is of greater interest than highly critical performance. It is available in two types: Knob-adjustable with the relay in the same enclosure as the solid state unit. The second type has a fixed time delay period that is set at the factory and cannot be modified; its case has no knob. The CH series is available for time delay on either operate or on release.

**Tolerance:**
Knob Adj. units: —0 +20% of maximum specified @ high end; minimum specified, or less, @ low end.
Others: ±5%.
(For AC units add ±½ cycle 60 Hz.)
**Delta Time:** ±10%. (For AC units add ±1 cycle 60 Hz.)
**Repeatability:** ±2%. (For AC units add ±1 cycle 60 Hz.)
**Temperature Range:** Operating: —10°C to +55°C.
Storage: —55°C to +85°C.
**Contact Rating:** DPDT 10 amps @ 120V AC 60 Hz.
**Dial Scale:** Reference only.
**Release Time:** 125 milliseconds typical: 200 milliseconds maximum.
**Recycle Time:** 125 milliseconds typical: 200 milliseconds maximum.
**Transient Protection:** 1000V, all 120V AC units.
**Polarity Protection:** Yes.
**Timing Cycle Interrupt Transfer:** Contacts may transfer momentarily if timing interval is interrupted.
**Weight:** Approx. 6oz.

# POTTER & BRUMFIELD RELAYS

## CL SERIES

Designed for delay on operate the CL Series is similar to the CU with the exception that they don't have timing cycle interrupt transfer and will time to 0.1 second. These solid state time delays are ideal for AC or DC applications. A DPDT KU relay rated 10 amperes is mounted in the same enclosure, forming a compact assembly. CL relays are enclosed in yellow polycarbonate dust covers and are available in three types: fixed, resistor adjustable and knob adjustable. Plug-in/quick-connect terminals facilitate handling and hook-up.

**Tolerance:**
Knob Adj. Types: —0 + 20% of maximum specified @ high end; minimum specified, or less, @ low end.
Res. Adj.: ± 10% high end; min. spec. or less at low end.
Fixed: ± 5%.
(For AC units add ± ½ cycle 60 Hz.)
**Repeatability:** ± 3%. (For AC units add ± 1 cycle 60 Hz.)
**Temperature Range:** Operating: —10°C to + 40°C.
Storage: —55°C to + 85°C.
**Contact Rating:** DPDT 10 amps @ 120V AC 60 Hz.
**Dial Scale:** Reference only.
**Release Time:** 100 milliseconds typical; 150 milliseconds maximum.
**Recycle Time:** 100 milliseconds typical; 150 milliseconds maximum.
**Transient Protection:** 1,000V on all 120V AC units.
**Polarity Protection:** Yes.
**Timing Cycle Interrupt Transfer:** None.
**Weight:** Approx. 3.5oz.

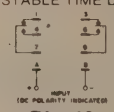
FIXED AND KNOB ADJUSTABLE TIME DELAY



Dia. 10

Dia. 11

## CU SERIES

CU Series relays are available in three types: Fixed time delay, adjustable with an external resistor, and knob adjustable with a reference scale. For minimum time (on external resistor types) terminals 2 and 5 must be shorted together . For maximum time, the listed resistor must be connected between terminals 2 and 5. For intermediate values, a lesser value resistor or a potentiometer is used. Either fixed or resistor adjustable models can be furnished in two types of enclosures with the relay mounted in the same case as the solid state circuit. All CU Series contain DPDT relay of the KUP series listed on Page 8.

**Tolerance:**
Knob Adj. Types: —0 + 20% of maximum specified @ high end; minimum specified, or less, @ low end.
Adj. types: ± 10% high end; min. specified or less at low end.
(For AC units add ± ½ cycle 60 Hz.)
Fixed: ± 5%
**Repeatability:** ± 3%. (For AC units add + 1 cycle 60 Hz.)
**Temperature Range:** Operating: —10°C + 40°C.
Storage: —55°C to + 85°C.
**Contact Rating:** DPDT 10 amps @ 28V DC resistive or 120V AC 60 Hz, 80% PF.
**Dial Scale:** Reference only.
**Release Time:** 150 milliseconds typical; 225 milliseconds maximum.
**Recycle Time:** 150 milliseconds typical; 225 milliseconds maximum.
**Transient Protection:** 1,000V on all 120V AC units.
**Polarity Protection:** Yes.
**Timing Cycle Interrupt Transfer:** Contacts may transfer momentarily if timing cycle is interrupted.
**Weight:** Approx. 3.5oz.

NOTE: See page 38 for Socket Ordering Information and explanation of timing functions and notes

# POTTER & BRUMFIELD RELAYS

## R16—our lowest cost time delay relay assembly.

R16 time delay on operate is available in the timing range of 2.0 to 30 seconds. A potentiometer is used to set the timing values. All components are mounted on a .062" G10 glass/epoxy printed circuit board having .250" quick-connect termination. Contacts have a life expectancy in excess of 10 million operations, mechanical, and at least 100,000 operations at full load @ 28V DC. The relay has a polyester cover ultrasonically welded to its base to keep out dust and contaminates. Cleaning by immersion is not recommended. The board mounts with #6 screws. Relay contacts will not transfer if timing cycle is interrupted.

**Tolerance:** Potentiometer adjust—set to any range, within specified range.
**Delta Time:** ± 10%.
**Recycle Time:** 100 ms for 95% recovery.
**Timing Cycle Interrupt Transfer:** For AC inputs—momentary.
**Temperature:**
Operating; —10°C to + 55°C.
Storage; —40°C to + 85°C.
**Mounting:** Four clearance holes for # 6 screws.
**Weight:** 1.5 oz. approximately.
**Transient Protection:** 100V for 100 μsec.
**Repeatability:** ± 3% max.
**Polarity Protection:** Yes.

**POTTER & BRUMFIELD offers you a choice from 1000 Standard Relays or, we'll make a SPECIAL for you.**

Our list of over 1000 standard relays provides a type for nearly any application. And if a standard model won't meet your requirements, we'll make one that will. You can order any of the standard relays from leading electronic parts distributors, too. They will give you fast, economical, off-the-shelf service.

Next time you need relays, call your local P&B sales engineer or Potter & Brumfield Division of AMF Incorporated, Princeton, Indiana 47671. Our telephone number is (812) 386-1000.

P&B Relays are available from your local electronic parts distributor.

## Timing functions and notes

**DELAY ON OPERATE** — The delay period begins when input voltage is applied. The relay will remain de-energized until the end of the delay period, at which time it energizes and operates the output contacts. Reset is accomplished by removal of the input voltage.

**INTERVAL ON** — The relay operates immediately upon application of input voltage. At the end of the adjustable, predetermined interval the relay drops out, even though input voltage may still be applied. It will remain dropped out until re-application of input voltage. Reset is accomplished by removal of input voltage.

**DELAY ON RELEASE** — The relay operates immediately upon application of input voltage. When input voltage is removed, the relay remains energized until the end of the delay period.

**NOTES: 1.** Has internal relay with DPDT contacts rated at 10 amperes, 120V AC; except CU Series, 10 amps @ 250V AC. **2.** Use with Potter & Brumfield relay KRP5AG-120V AC, KRP11AG-120V AC or KRP14AG-120V AC. **3.** Use with KRP5DG-24V DC, KRP11DG-24V DC, or KRP14DG-24V DC relay. **4.** Use with Potter & Brumfield KHP17D11-24V DC relay. **5.** Resistor shown in diagrams 12, 13 and 14 applies to CJH series only. **6.** Use w/Potter & Brumfield PRD11AY-120V AC relay. **7.** Internal relay contacts rated at 10 VA. **8.** Use 750K resistor for maximum time. **9.** Use 33K resistor for ½ maximum time. **10.** Use 200K resistor for ½ maximum time. **11.** Use with Potter & Brumfield KHP17A11-120V AC relay. **12.** Use 400K resistor for ½ maximum time. **14.** Use 1.6 meg. resistor for ½ maximum time.

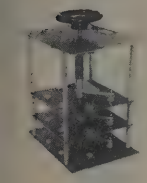
RELAYS
SWITCHES
MEASUREMENT
CONTROL UNITS

AC
DC
RF
PULSE

1 KV TO 600 KV
ENERGY STORAGE
ELECTRONIC AND POWER
SAFETY AND ACCESSORIES

## HV ROTARY SWITCHES



Ratings from 5 to 100 KV, 1 to 500 amps. Either manual or electrical operators, depending upon requirements. Position detents and interlocks to prevent opening under load.

## HIGH CURRENT SWITCHES

Models are available up to 20,000 amps continuous, and over 500,000 amps pulse, with voltage ratings of 6 volts to 300 KV peak test. Many are air cylinder or motor operated for high contact force.

## HV RELAYS

HV relays of the air insulated type both for low and high current. This series has ratings from 1 to 200 amps continuous, 100 to 100,000 amps momentary and capacitor discharge. Peak test voltages from 5 to 300 KV. Single or Multipole. NO, NC and DT. Auxiliary contacts optional on all types. Extended life and tungsten contacts also for high current closing.

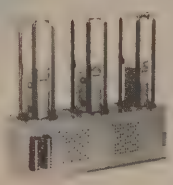
## HV-RF SWITCHES

For RF applications, low loss G-7 Silicone glass insulation and non-magnetic materials are used. Switches available up to 50 MHz. 1 to 50 KV, 1 to 800 amps. Air or hydraulic, and spring actuated.

## HV GROUNDING RELAYS

Extra high voltage low corona grounding relays of the air insulated type. Ratings up to 600 KV peak at 100 amps continuous. Solenoid, motor or air cylinder operated and spring or gravity return.

## VACUUM CONTACTORS CIRCUIT BREAKERS



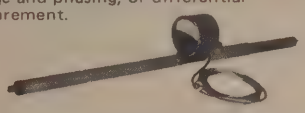
Vacuum switches, single phase, three phase, upright or low profile, for high reliability sealed arc interrupting or crobar shorting. 5 to 200 KV RMS operate. 50 to 4,000 amps continuous, 2,000 to 35,000 amps AC, 10 to 20,000 amps DC interrupt, 5,000 to 100,000 amps momentary and capacitor discharge.

## QUIET AC PRECISION SOLENOIDS

Class H coils with 180° C insulation. 1¼" stroke, or, with special stainless steel guides extendable to several inches. Corrosion resistant. Coil voltages offered are: 115 V, 208 V, 240 V, and 480 V, 60 Hz. 50 Hz optional. Other voltages and frequencies including DC available.

## Hi-Z T.M. HV VOLTMETERS SAFE POWER LINE USE AC - DC

Fully safe portable, all solid state, 2% to 5% accuracy. Taut band shielded high voltage measurement with minimum circuit loading. 0.0001 V to 240 KV AC and DC. Ideal for use with Elbow capacitance tap voltage test points. For cable test point or direct line voltage and phasing, or differential measurement.



## SOLENOID DRIVERS ENERGY STORAGE UNITS

For high speed or loss of power automatic circuit breaker trip and for high speed activation of contactor or circuit breaker solenoids. Energy storage up to 400 joules or more at 150 to 700 volts or more, 100 to 4,000 microfarad or more. Instantaneous SCR control available.

## TOROIDS, SPHERES, CORONA SHIELDS

Geometrically designed to avoid excessive voltage gradients at connecting points and other areas needing shielding or balancing of electrostatic fields to increase withstand voltage and minimize corona. Diameters are to international standard metric sizes.

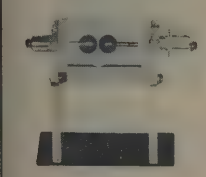
## HV DIGITAL MEMORY MULTIMETERS

Easy to read, 4½-digit display; 0.05% basic accuracy. 0.0001 volt to 900 KV. Battery/AC with charger. Recorder and scope outputs. DC, AC PK, AC RMS average, AC RMS true, RF to 250 MHz, ohms, megohms, AC and DC current, Peak Memory.

## HV VOLTAGE DIVIDERS

Precision compensated resistance-capacitance voltage dividers for 20 KV to 900 KV, DC to 10 MHz or to 0.2 USEC rise time pulse. 1,000/1 ratio matched to 1 megohm, 20 to 50 pf display or recorder, or as required. Accuracy and stability 0.1% to 3%.

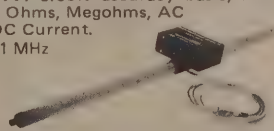
## HV ADJUSTABLE SPARK GAPS



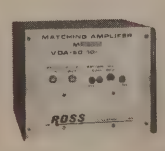
Non-melting carbon spheres, 1 cm to 10 cm and heavy wall aluminum spheres, 10 cm and above. Dust tight transparent covers used 1 KV to 88 KV. Open style to 670 KV. Direct reading micrometer type calibrating device.

## HV DIGITAL PROBES

HV Safety Probes for any Digital Display or VTVM. Also available complete with large 4½ - digit display 0.1% to 5% AC/DC accuracy, safety handle digital voltmeter. Battery/AC with charger. Removable Digital Display or Multimeter. Shielded. 0.0001 V to 200 KV. 0.05% accuracy basic, with DCV, ACV, Ohms, Megohms, AC and DC Current.
DC to 1 MHz



## WIDE BAND MATCHING AMPLIFIER



Rechargeable battery/AC operated. DC to 1 MHz. 1 megohm or higher input to 50 ohm load. Cable driver has maximum output to 10 V PK (20 V PK to PK) and maximum input of 10 V to 1,000 V PK direct from signal source. With Ross wide band HV dividers useful 0.1 V to over 900 KV.

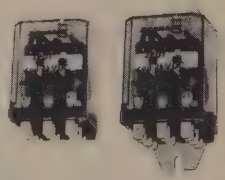
# SCHRACK RELAYS

**low cost • immediate delivery • highest quality**

## GENERAL PURPOSE RELAYS — INDUSTRIAL

**CA**—A dependable, robust unit, similar to CAD series except open frame. Supplied with pierced .110 faston terminals for soldering or quick connect-disconnect. P.C. terminals optional. Coil voltage from 6—230 VAC. 50/60 cycle. 6—110 VDC.

**CAD**—A compact, plug-in relay with dust cover. Available with 1, 2, or 3PDT contacts rated at 5 or 10 amps. The 8 or 11 pin base mates with any standard tube socket. Coil voltage from 6-230 VAC. 50/60 cycle, and 6—110 VDC.



**RM**—A small, low cost relay supplied with pierced .187 faston terminals for plug-in, soldering, or quick connect-disconnect application. Dust cover, plain style, for socket applications, or with slotted flanges on both ends of dust cover to permit bracket mounting directly to chassis. Sockets, neon lamps, test button available. U.L. recognized. File # E38891. **DPDT unit for 15 amp use.** 3PDT unit for 10 amps.

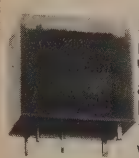
**ZKU**—A dependable miniature general purpose relay for control circuits, automatic control systems and electronic devices requiring compact relay design and high reliability. Available with plug-in, solder or PCB terminals and 2, 4, or 6 Form C fine silver (gold flashed) contacts rated at 3 amps. Contact size: .078 O.D. Coil voltages from 6-110 VDC. Enclosed in dust cover, and can be mounted in any position.

**ZLU**—Same as above, only sil-cad. oxide contacts rated at 5 amps. Contact size: .100 O.D.

## MINIATURE RELAYS

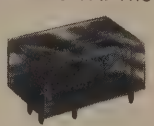
**RA**—A 4 PDT, U.L. recognized, miniature general purpose relay with gold flashed 3 amp contacts. Coil voltage from 6-220 VAC and 6-110 VDC. Available as plug-in unit to any one of 3 different socket types, with solder lugs or standard P.C. terminals. Enclosed in dust cover. Various contact materials available.

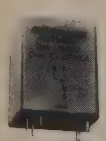
**RAX**—Same as above except U.L. recognized for opposite polarity voltages.



**RU101**—A SPDT low cost miniature relay built to meet stringent automotive Q.C. specifications. Widely used in office machines, alarm systems and appliances. Available for PCB mounting with Form C fine silver (gold diffused) contacts rated at 10 amps. Coil voltages from 3-110 VDC. Enclosed with snap-on nylon dust cover.

**RU115**—A miniature low profile relay with an unusually high rated breaking capacity of 10 amps at 2200 VA. The 1 Form C relay contact is rated @ 6 amps, 250 VAC continuous duty. Can be mounted in any position. Coil voltages from 5-110 VDC. Dimensions: 1⅛" long x ¾" wide x ½" high, in clear dust cover for PCB mounting.





**ZL880**—A smaller relay than the RU101, available for PCB mounting. 1 Form C fine silver (gold flashed) contacts, rated at 6 amps at 250 VAC. Relay requires less power consumption than our RU115. Coil voltages from 3-110 VDC. Can be supplied with 2 coils - bifiliar winding; 2 coils - different coil resistances; or 2 coils - equal coil resistances. Low cost.

## MAGNETIC LATCHING

**CRD/CRF**—A single coil magnetic latching relay similar in base design to the CAD or CAF series, CRD has octal or 11 pin base CRF pierced .110 faston terminals for soldering or quick connect-disconnect applications P.C. terminals can be furnished. Since no parts are subject to wear or friction, longer life is obtainable than with the mechanical latching relay. DPDT and 3PDT available at 10 amps. Enclosed in dust cover; aluminum dust cover optional with CRF type.

**RR**—Miniature version of the above, but furnished as 4PDT with 3 amp contact rating. Same physical size as RA relay. Enclosed in dust cover.

## SENSITIVE RELAYS

**CSD/CMD**—Mechanical construction similar to CA or CAD types but with sensitivity ranging from 40-300 MW and 250 MVA. Max. 3PDT. Coil voltage from 5-200 VAC and 4.9-100 VDC.

## STEPPING SWITCHES

**RTM**—A miniature plug-in, high speed stepping switch ideal for use where economy of space and price is important. 2 pole 10 or 2 pole 12 position, gold plated contacts mate with socket which terminates on printed circuit spacing. Coil voltage from 12 to 110 VDC. Enclosed in dust cover. Dimensions: 1 5/8" L x 13/16" W x 15/16" H.

***A complete variety of relay dust covers, plugs and sockets.***

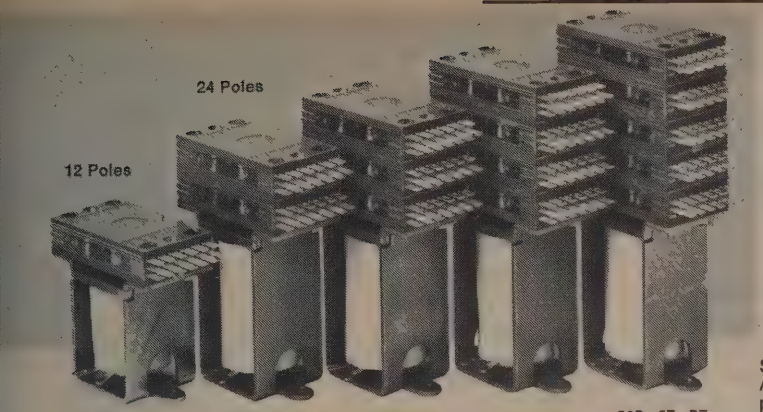
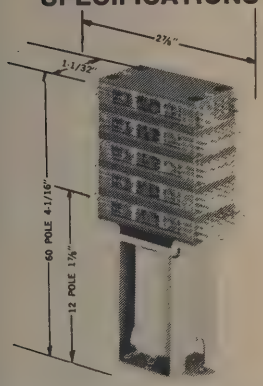
**SCHRACK ELECTRICAL SALES CORPORATION** 1140 BROADWAY, NEW YORK, N.Y. 10001



# T-bar RELAYS for Multipole High Density Switching

Switch from 4 to 60 circuits with only one T-Bar Relay. Available in configurations of 4, 8, 12, 24, 36, 48 and 52 poles with "A" or "C" contacts and 60 poles with "A" form contacts. For low level applications specify the 901 Series. For general purpose applications specify the 801 Series.

## SPECIFICATIONS



**Contacts:** Series 800—general purpose gold plated
Series 900—low-level bifurcated gold plated

**Contact Rating:** Series 800—5 amps max. resistive to 150 watts
Series 900—1 amp max. resistive to 50 watts

**Life Expectancy: at 20 CPM** Series 800—30,000,000 mechanical (latching limited to 1,000,000)
20,000,000 @ 100 mw
100,000 @ 5 amps 28 VDC
Series 900—30,000,000 mechanical
20,000,000 @ 100 mw
100,000 @ 1 amp at 28 VDC

**Contact Resistance:** 20 milliohms typical

**Ambient Temperatures:** —55° to plus 85°C

**Terminals:** Mate with T-Bar Connectors

**Dielectric Strength:** 1000 VRMS @ 60 cycles/sec. (higher available)

**Insulation Resistance:** 5000 megohms min. (higher available)

**Power @ 25°C:**

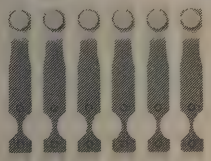
| Poles | Form | Watts |
|---|---|---|
| 4, 8 or 12 | A, B or C | 3 |
| 24 | A, B or C | 3.4 |
| 36 | A, B or C | 5.2 |
| 48 | A | 5.2 |
| 48 | B or C | 6.5 |
| 52 | A, B or C | 6.5 |
| 60 | A | 6.5 |
| 4, 8 or 12 | D | 3.4 |
| 24 | D | 5.2 |
| 36 | D | 6.5 |

NOTE: On all latching standard pulse coil power is 6 watts, except on bifilar coils, which is 10 watts.

**Operate and Release Time Typical (at nominal voltage 25°C):**
**Operate** (Refer to factory for faster operation):
4, 8 or 12 poles: 15 MS max.
24 poles: 25 MS max.
36 poles: 30 MX max.
48 poles: 35 MX max.
52 or 60 poles: 45 MS max.
For latching types: latch and unlatch times are 15 MS typical, all sizes.
**Release:** 5 MS typical
**Contact Bounce:**
2 MS typical N.O. contacts
6 MS typical N.C. contacts
4 MS typical for latching units (both ways)

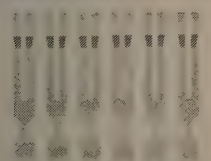
## Take your choice of 2 contacts!

**800 SERIES**
**for reliable General Purpose Switching**



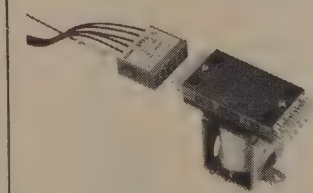
The 800 Series contact is a highly reliable gold-plated button contact. With its high contact pressure and positive wiping action, it is used in control type applications and in general purpose switching, such as relays, valves, lamps, etc. Contact Rating: up to 5 AMPS max.

**900 SERIES**
**for reliable Low Level Switching**



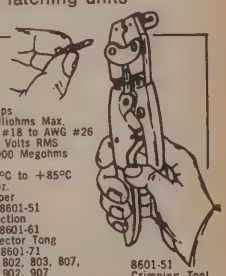
The 900 Series DATA-RITE™ contact has the reliability of a bifurcated contact with the added feature of two degrees of wiping action. The unique EDGE-TO-DOME contact guarantees a clean surface, which is critical for low level signals. The 900 Series is typically used in computer I/O signals; voice and data-grade communications; thermocouple and strain gauge outputs; all low level switching, whenever reliability is a premium, or whenever slight variations in contact resistance cannot be tolerated. Contact Rating: Microvolts up to 1 AMP max.

## T-BAR CONNECTORS



The T-Bar Series 88601 Connector has been specifically designed for use with T-Bar switches and relays. The connector contacts are crimp type which are snapped into a plastic insulator block. After installation, connectors are held in place against shock and vibration by use of a retaining clip.

| | |
|---|---|
| Current Carrying Capacity | 5 Amps |
| Contact Resistance | 5 Milliohms Max. |
| Wire Accommodated | AWG #18 to AWG #26 |
| Dielectric Strength | 1000 Volts RMS |
| Insulation Resistance | 100,000 Megohms Min. |
| Ambient Temperature | —55°C to +85°C |
| Weight | 0.3 Oz. |
| Recommended Tools | Crimper P/N 8601-51 Extraction P/N 8601-61 Connector Tong P/N 8601-71 |
| Use 88601 With | 801, 802, 803, 807, 901, 902, 907 |



## HOW TO ORDER

**1.** Specify Series **2.** Specify Number of Poles and Contact Form **3.** If A Relay, Specify Coil Voltage

Don't forget to order the mating T-Bar Series 88601 Connector! One for each 6 poles.

**901 — 12 C — 24**

| SERIES | Application | No. of Poles | Contact Form* | Actuating Mechanism | Coil Voltage |
|---|---|---|---|---|---|
| 801 | General Purpose | 4 to 52 60 Pole Unit "A" Form Only | "A" or "C" | CONTINUOUS DUTY COIL | 6, 12, 24, 28, 48, 110 VDC 115 VAC |
| 901 | Low Level | | | | |
| 807 | General Purpose | 12 to 52 | "C" | MAGNETIC LATCHING COIL (Pulse to latch, pulse in opposite polarity to unlatch.) | 6, 12, 24, 28, 48, 110 VDC |
| 907 | Low Level | | | | |

*Form "A"— normally open contacts. Form "C"— double throw, break-before-make.

Manufactured under 1 or more of the following patents: 3206990, 3226508, 3689856.

# TELEDYNE RELAYS

## Military TO-5 Relays

The most versatile line of subminiature relays in the industry. Featuring all welded construction, hermetic sealing, and high force/mass ratios for excellent resistance to environmental extremes. Gold plated precious metal contacts assure reliable switching of loads from dry circuit to 1 ampere. Contact geometry and low inter-contact capacitance provide RF switching capability up to 500 MHZ. Most models qualified to MIL-R-39016, levels "L", "M", and "P" or MIL-R-28776.

**Available in following versions:**

- **SPDT & DPDT**, with optional internal suppression and/or steering diodes
- **SPDT & DPDT Sensitive,** with optional internal suppression and/or steering diodes
- **SPDT & DPDT Hybrid** (both standard and sensitive coil versions) with internal transistor driver and suppression diode
- **SPDT, DPDT, & 4PST Magnetic Latching,** with optional internal suppression and/or steering diodes
- **SPDT & DPDT Bifilar**
- **Special packages available upon request.**

**General Specifications:**

Contact Resistance: 0.1Ω max. initial/0.2Ω max. after life at max. load
Life: 100,000 operations @ max. rated contact load (life expectancy $10^7$ operations at low level)
Temperature: −65°C to +125°C
Vibration: 30 g's to 3000 Hz.
Shock: 80 g's for 11 ms. (some maglatch models higher)

**Terminal and Spreader Pad Options:**

1. Standard terminal lengths: 1.5" (38.10 mm) wire leads or .187" (4.75 mm) pins (pin versions designed for use with plug-in sockets)
2. All models except 411 & 431 series (including D & DD versions) and 441 series can be supplied with spreader pads installed and cemented in place. Spreader pad P/N 192-10 for direct mounting on PC boards; P/N 192-59 designed for use with standard DIP sockets.

*Suffix D denotes internal suppression diode, DD suppression & steering diodes, and T transistor driver & suppression diode.
**Ratings for AC, Lamp, Inductive and Capacitive Loads also specified.

## Commercial/Industrial TO-5 Relays

Low cost versions of DPDT MIL qualified TO-5 relays. Hermetic sealing, all welded construction, and gold plated precious metal contacts assure reliable switching of loads from dry circuit to 1 ampere. Contact geometry and low intercontact capacitance provide RF switching capability up to 500 MHz.

**Available in following versions:**

- **DPDT,** with optional internal suppression diode
- **DPDT Sensitive,** with optional internal suppression diode
- **DPDT Hybrid** (both standard and sensitive coil versions) with internal transistor driver and suppression diode
- **DPDT Magnetic Latching,** with optional internal suppression diodes

**Special packages available on request.**

## Spreader Pads for TO-5 Relays

Preform and spread leads to grid patterns compatible with printed circuit board layouts and DIP sockets, with minimum additional profile height.

**P/N 192-10**
- Preforms and spreads leads to .200" X .300" grid at .100" spacing
- Serves as spacer and insulator for printed circuit board applications
- Simplifies insertion of leads into printed circuit boards
- Reduces stress on glass seals
- Aids visual inspection of solder flow
- Fits all TO-5 relays except 411, 424A, and 431 series (including D and DD versions) and 441 series. (See Note 2)

**P/N 192-59**
- Preforms and spreads leads to .300" grid at .100" spacing
- Designed for use with standard DIP sockets
- Fits the following TO-5 relay series: 412, 421, and 432 (including D and DD versions), 712 and 732 (including D versions), 411T, 431T, and 442 (See Notes 3 and 5)

**P/N 192-67**
- Preforms and spreads leads to .200" X .300" grid at .100" spacing
- Fits the following TO-5 relay series: 411 and 431 (including D and DD versions), 441 and 424A (See Note 4)

**Notes:**
1. Relays can be supplied with spreader pads installed and cemented in place.
2. To order relays with 192-10 spreader pads installed, add M to part number (for example: 412D-26 with 192-10 pad installed is 412DM-26).
3. To order relays with 192-59 spreader pads installed, add M2 to part number (for example: 412D-26 with 192-59 pad installed is 412DM2-26). Leads are trimmed to .130" below pad for plugging directly into DIP sockets.
4. To order relays with 192-67 spreader pads installed, add M3 to part number (for example: 412D-26 with 192-67 pad installed is 412DM3-26).
5. Relays with 9 or 10 pins may be mounted on 192-59 spreader pad, but will not plug into standard DIP sockets.
6. Material: Diallyl Phthalate.

# TELEDYNE RELAYS

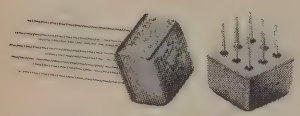
## High Environmental Military TO-5 Relays

Designed to withstand severe environmental conditions of shock, vibration, or elevated temperature in excess of normal military specification levels. The following versions are available, all of which meet other requirements of MIL-R-39016:

| SERIES | CONTACT DATA | | COIL DATA | | |
|---|---|---|---|---|---|
| | ARRANGEMENT | MAX. RATING (AMPS @ 28 VDC) | NOMINAL VOLTAGE (VDC) | NOMINAL RESISTANCE (Ω) | MUST-OPERATE POWER (MW) |
| 412H | 2 FORM C | 1 | 5, 6, 9, 12, 18, 26, 5 | 50, 98, 220, 390, 880, 1560 | 130 |
| 412K | 2 FORM C | 1 | 5, 6, 9, 12, 18, 26, 5 | 50, 80, 160, 300, 600, 1350 | 250 |
| 412V | 2 FORM C | 1 | 5, 6, 9, 12, 18, 26, 5 | 50, 70, 155, 235, 610, 1130 | 170 |

**412H Series – High Temperature (200°C)**
**412K Series – High Shock (4000 g's/0.5ms)**
**412V Series – High Vibration (250 g's)**

Notes
1. Unless otherwise specified relays are supplied with 1.500" (38.10 mm) leads. For .187" (4.75 mm) pin versions, add "S" to part number (i.e. 412H-26 becomes 412HS-26).
2. All series can be supplied with spreader pads installed and cemented in place. Spreader pad P/N 192-10 for direct mounting on PC boards: P/N 192-59 designed for use with standard DIP sockets.
3. Screened hi-rel versions of TO-5 relays are available on special order and can be supplied to meet the requirements of NASA MSF C Spec. 40M 37496 and NASA GSF C Spec. S-311-P-2(06), in addition to specific customer applications.



## Centigrid® Military Relays

The smallest subminiature, hermetically sealed relay available. Low profile, .230" (5.84mm) high by .370" (9.40mm) square, with .100" grid spaced terminals. Sensitive version, 132 Series, is .350" (8.9mm) high and features ultra-low coil power dissipation. All-welded construction, hermetic sealing, and high force/mass ratios for excellent resistance to environmental extremes. Gold plated precious metal contacts assure reliable switching of loads from dry circuit to 1 ampere. Contact geometry and low inter-contact capacitance provide RF switching capability up to 500 MHz. Teledyne 112 Series qualified to L, M, and P levels of MIL-R-39016.

| SERIES* | CONTACT DATA | | COIL DATA | | | APPLICABLE MIL. SPEC. |

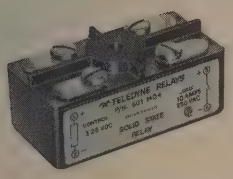
# Solid State AC Relays

## 601-1400 Series — Optically Isolated 5 and 10 Amps



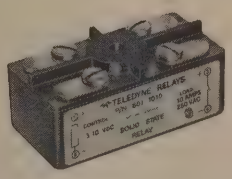
**UL Recognized — File #59547**

**CSA Certified — File #31043**

Solid state AC relays featuring LED optical isolation and synchronous/zero voltage turn-on. Available in 5 or 10 Amp steady state current ratings for 120 or 250 Volt loads (with peak ratings up to 600V). SPST, normally open. Choice of logic compatible 3-28 VDC or 90-250 VAC input. The versatile package design of the 601-1400 series provides choice of screw or quick-disconnect terminals for chassis or panel mounting, or solder pins for direct PC board applications. 1" (25.4mm) × 2" (50.8mm) × .9" (22.9mm) package size makes it the smallest 10 Amp solid state relay available.

| INPUT (CONTROL) VOLTAGE | OUTPUT VOLTAGE RATING | | OUTPUT (LOAD) CURRENT RATING & PART NUMBERS | |
|---|---|---|---|---|
| | CONTINUOUS VAC (RMS) | TRANSIENT VAC (PEAK) | 5 AMP | 10 AMP |
| 3-28 VDC | 140 | 200 | 601-1401 | 601-1402 |
| | 250 | 400 | 601-1403 | 601-1404 |
| | 250 | 600 | 601-1403H | 601-1404H |
| 90-250 VAC | 140 | 200 | 601-1411 | 601-1412 |
| | 250 | 400 | 601-1413 | 601-1414 |

## 601-1000 Series — Transformer Isolated



Transformer isolated version of the 601-1400 Series. High input/output isolation ($1500V/10^9$ Ohms) achieved through magnetic coupling. Asynchronous turn-on; zero current turn-off. SPST, available in 3 and 10 Amp ratings for 120 or 250 Volt loads. Features "adaptive" package design, providing choice of either screw or quick-disconnect terminals for chassis or panel mounting, or solder pins for direct PC board mounting.

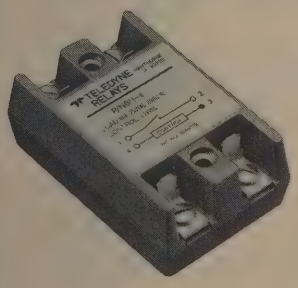
**UL Recognized — File #E47991**

**CSA Certified — File #31043**

| INPUT (CONTROL) VOLTAGE RANGE | OUTPUT CURRENT RATING AND PART NUMBERS | |
|---|---|---|
| | 3 AMP | 10 AMP |
| 3-10 VDC | 601-1007 | 601-1010 |
| 6-32 VDC | 601-1017 | 601-1020 |
| 60-140 VAC | 601-1027 | 601-1030 |

Basic part number provides screw terminals
Add suffix "P" for PC board pins, "Q" for quick disconnect terminals

## 611 Series — Optically Isolated — 10 to 40 Amps



High power solid state AC relays, available in 10, 15, 25 and 40 Amp ratings, for 120 and 250 Volt loads (with peak ratings up to 600V). Features LED optical isolation and synchronous/zero voltage switching. High output dv/dt immunity -200 Volts/ μsec. typical. Choice of logic compatible 3-28 VDC or 90-250 VAC input. Provided with multipurpose screw and quick-disconnect terminals.

| INPUT (CONTROL) VOLTAGE | OUTPUT VOLTAGE RATING | | OUTPUT CURRENT RATING AND PART NUMBERS | | | |
|---|---|---|---|---|---|---|
| | CONTINUOUS (RMS) | TRANSIENT (PEAK) | 10 AMP | 15 AMP | 25 AMP | 40 AMP |

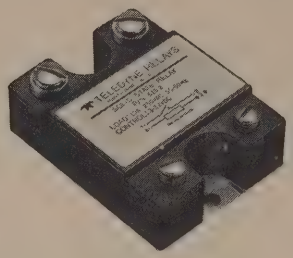
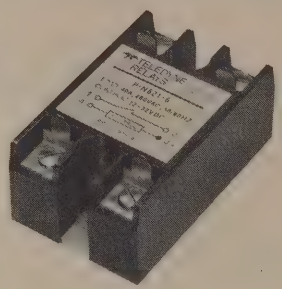
## Solid State AC Relays



### 615 Series - Optically Isolated 10, 25, and 40 Amps

High power solid state AC relays in 10, 25, and 40 Amp ratings for 125 and 250VRMS loads (with peak transient ratings up to 600V). Features 1500VRMS input/output isolation, synchronous zero-voltage switching, and high output transient immunity. Use of custom ICs in lieu of conventional discrete circuitry results in 40% reduction in component count for higher reliability and lower cost. Input voltage range of 3-32 VDC with constant current input circuit provides low and high level logic compatibility.

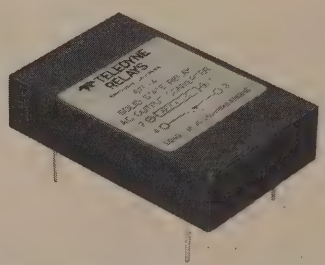
| OUTPUT (LOAD) CURRENT RATING & PART NUMBER | | | OUTPUT VOLTAGE RATING (VAC) | |
|---|---|---|---|---|
| 10 AMP | 25 AMP | 40 AMP | Continuous (RMS) | Transient (PEAK) |
| 615-1 | 615-3 | 615-5 | 140 | 200 |
| 615-2 | 615-4 | 615-6 | 250 | 400 |
| 615-2H | 615-4H | 615-6H | 250 | 600 |



### 621 Series — High Voltage, Optically Isolated

Solid State AC Relays featuring 3750VRMS optical isolation and synchronous/zero voltage turn-on. Available in 15, 25, and 40 Amp steady state current ratings for 480 Volt loads (with peak ratings of 800V). SPST, normally open. Choice of logic compatible 3-14 or 12-32 VDC input. Package design provides multi-purpose screw and quick-disconnect terminals. Designed to meet safety requirements of UL, CSA, VDE and IEC.

| INPUT VOLTAGE RANGE | OUTPUT (LOAD) CURRENT RATING & PART NUMBERS | | |
|---|---|---|---|
| | 15 AMP | 25 AMP | 40 AMP |
| 3-14 VDC | 621-1 | 621-3 | 621-5 |
| 12-32 VDC | 621-2 | 621-4 | 621-6 |



### 675 Series — Low Profile PC Board Relays

Optically isolated solid state AC relays featuring low profile package for PC board mounting. Maximum steady state load rating 3A/250VRMS. SPST, normally open. Control inputs are compatible with both low and high level logic systems.

| INPUT VOLTAGE RANGE | PART NUMBER | OUTPUT VOLTAGE RATING | |
|---|---|---|---|
| | | CONTINUOUS (RMS) | TRANSIENT PEAK |
| 4-10 VDC | 675-4 | 250 VAC | 400 VAC |
| | 675-4H | | 600 VAC |

TELEDYNE RELAYS

# SERENDIP® Commercial/Industrial DIP Solid State Relays

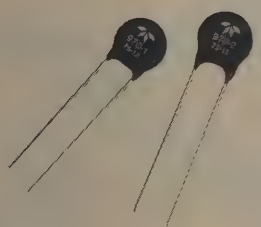
Subminiature solid state relays in standard TO-116 DIP packages. Featuring all solid state circuitry with hybrid microcircuit construction, and high input/output isolation (up to 2500 volts/$10^9$ Ohms). Six models available providing choice of output: bipolar (AC or DC), AC (triac), and DC (transistor). Bipolar (640/644 series) and DC (643 series) are direct pin-for-pin replacements for standard DIP reed relays.

| | INPUT DATA | | OUTPUT (LOAD) RATINGS | | | |
|---|---|---|---|---|---|---|
| | | | | CURRENT | | |
| PART NUMBER | VOLTAGE (VDC) | MAX. CURRENT (MADC @ 5V) | AC/DC | @ 10V INPUT | @ 5V INPUT | VOLTAGE |
| 640-1 | 3.8-10 | 22 | BIPOLAR (AC or DC) | ±80 mA | ±40 mA | ±50 V PEAK |
| 641-1* | 4-10 | 15 | AC | 0.5 A (Note 1) | 0.5 A (Note 1) | 150 VRMS |
| 641-2* | 4-10 | 15 | AC | 0.5 A (Note 1) | 0.5 A (Note 1) | 250 VRMS |
| 643-1 | 3.8-10 | 15 | DC | 400 mA | 200 mA | 60 VDC |
| 643-2 | 3.8-10 | 15 | DC | 100 mA | 50 mA | 250 VDC |
| 643-3 | 3.8-10 | 15 | DC | 400 mA | 200 mA | 135 VDC |
| 644-1 | 3.8-6 | 18 | BIPOLAR (AC or DC) (Note 2) | ±5 mA | ±5 mA | ±5 V PEAK |

**Notes:**
1. 1 Amp with standard DIP heat sink (Thermalloy P/N 6007A, or equivalent).
2. Features low offset voltage (100 microvolts typical).

***UL Recognized — File #E55197**

# Metal Oxide Varistors (MOV)



MOV SYMBOL

## 970 Series

| PART NUMBER | TRANSIENT (PEAK) RATING OF RELAY | MAXIMUM CONTINUOUS LINE VOLTAGE (RMS) |
|---|---|---|
| 970-1 | 400 VAC | 140 VAC |
| 970-2 | 600 VAC | 250 VAC |

Teledyne 970 Series Metal Oxide Varistors (MOVs) are characterized specifically for use with Teledyne solid state AC relays and I/O converter modules for protection against high voltage transients that are prevalent on AC lines. MOVs are bi-directional voltage sensitive devices that assume a low impedance state when their design voltage threshold is exceeded. As such, they perform a transient voltage clipping or suppression function on the AC line similar to back-to-back zener diodes and are ideal for circuit protection use from the standpoint of performance, economy and ease of installation.

(Consult factory for information regarding MOVs with higher ratings.)

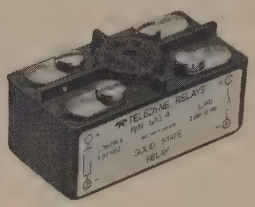
# TELEDYNE RELAYS
# Solid State DC Relays

## 603 Series — Optically Isolated



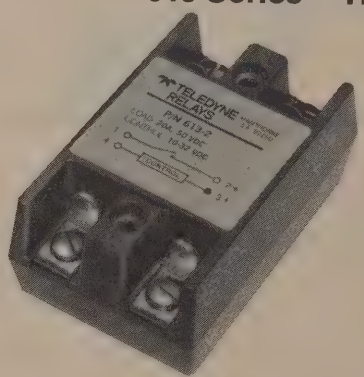
Solid state DC relays featuring LED optical isolation. SPST, normally open. Available in 2 and 5 Amp steady state current ratings, up to 250 VDC. DC control inputs are compatible with both low and high level logic systems. As an added option, controlled rise and fall time is offered to limit in-rush currents for lamp loads and switching transients for inductive loads. Package configuration provides either screw or quick-disconnect terminals for chassis or panel mounting, or solder pins for direct PC board mounting.

Size: 1″ (25.4mm) X 2″ (50.8mm) X .9″ (22.9mm).

| INPUT VOLTAGE RANGE | OUTPUT (LOAD) VOLTAGE RATING (VDC) | OUTPUT CURRENT RATING AND PART NUMBERS | |
|---|---|---|---|
| | | 2 Amp | 5 Amp |
| 3-32 VDC | 50 | 603-1 | 603-2 |
| 4-10 VDC | 250 | | 603-3 |
| 10-32 VDC | 250 | | 603-4 |
| 90-250 VAC | 50 | 603-11 | 603-12 |
| 3-32 VDC | 50 | 603-21 | 603-22 |
| | | WITH CONTROLLED RISE AND FALL TIME | |

**Notes:**
1. 603-3 and -4 utilize transformer isolation.
2. Basic P/N provides screw terminals. Add suffix "P" for PC board solder pins, suffix "Q" for quick disconnect terminals.

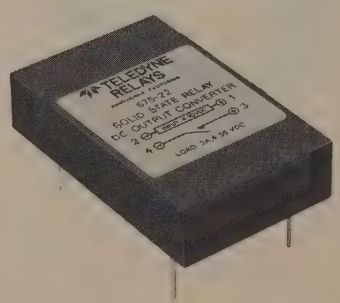
## 613 Series — High Current, Transformer Isolated



High current solid state DC relays featuring transformer isolation for low off-state leakage. SPST, normally open. 20A/50VDC maximum steady state load rating. Control inputs are compatible with both low and high level logic systems. Package design provides multipurpose screw and quick-disconnect terminals.

| INPUT VOLTAGE RANGE | PART NUMBERS |
|---|---|
| 4-10 VDC | 613-1 |
| 10-32 VDC | 613-2 |

## 675 Series — Low Profile PC Board Relays



Optically isolated solid state DC relays featuring low profile package for PC board mounting. 3A/55VDC maximum steady state load rating. SPST, normally open. Control inputs are compatible with both low and high level logic systems.

| INPUT VOLTAGE RANGE | PART NUMBERS |
|---|---|
| 4-10 VDC | 675-22 |
| 10-32 VDC | 675-23 |

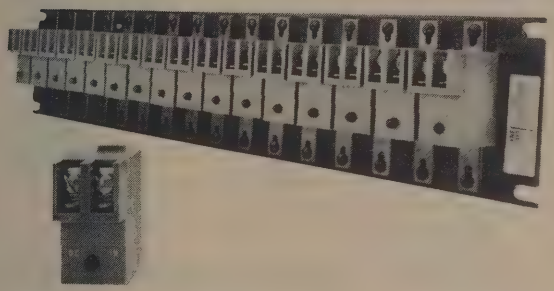
# TELEDYNE RELAYS
# Solid State AC & DC I/O Converters

## 673 Series — Panel Mounted
### Optically Isolated



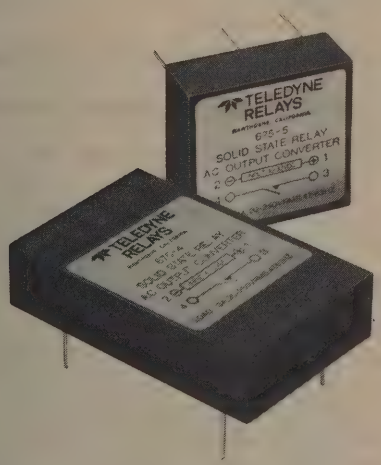
Designed for use in programmable controllers, computerized process control systems, machine tool controls, etc. All solid state circuitry — optically isolated — with high transient and noise immunity to withstand severe industrial environments without false triggering. Unique single circuit modular package design with logic terminals physically isolated from power wiring and high barriered power terminals providing for side by side panel mounting, thus eliminating the need for additional interconnecting terminal strips. This modular I/O interface concept facilitates installation and maintenance and offers substantially greater system flexibility when compared to conventional multicircuit PC card systems. Integral LED status indicators are included for easy troubleshooting. There are 11 different converter modules in the series as shown on the table.

| P/N | DESCRIPTION | RATINGS |
|---|---|---|
| 673-1 | AC Input Converter | 95-132 VAC Input |
| 673-11 | AC Input Converter | 187-250 VAC Input |
| 673-4 | AC Output Converter (400V Peak Output Rating) | 4-10 VDC Input 3 amps/132 VAC Output |
| 673-4H | AC Output Converter (600V Peak Output Rating) | 4-10 VDC Input 3 amps/250 VAC Output |
| 673-5 | AC Output Converter (400V Peak Output Rating) | 10-32 VDC Input 3 amps/132 VAC Output |
| 673-5H | AC Output Converter (600V Peak Output Rating) | 10-32 VDC Input 3 amps/250 VAC Output |
| 673-21 | DC Input Converter | 10-55 VDC Input |
| 673-31 | DC Input Converter | 95-132 VDC Input |
| 673-41 | DC Input Converter | 187-250 VDC Input |
| 673-22 | DC Output Converter | 4-10 VDC Input 3 amps/55 VDC Output |
| 673-23 | DC Output Converter | 10-32 VDC Input 3 amps/55 VDC Output |

**Notes:**

1. AC Converters are color-coded Blue; DC Converters are color-coded Red.
2. For additional information on Series 671P Mounting Panel, see page 11.
3. Mounting hardware kit for 32 modules available, P/N 9-369.

## 675 Series — PC Board Mounted
### Optically Isolated



Functionally identical to 673 Series but featuring low profile PC board compatible potted module construction for greater packaging density and close card spacing. Designed to replace discrete I/O interface circuitry, this modular PC board concept facilitates installation and maintenance. Utilizes all solid state circuitry — optically isolated — with high transient and noise immunity. There are 9 different converter modules in the series as shown on the table.

| P/N | DESCRIPTION | RATINGS |
|---|---|---|
| 675-1 | AC Input Converter | 130 VAC Input |
| 675-11 | AC Input Converter | 250 VAC Input |
| 675-4 | AC Output Converter (400V Peak Output Rating) | 4-10 VDC Input 3 amps/250 VAC Output |
| 675-4H | AC Output Converter (600V Peak Output Rating) | 4-10 VDC Input 3 amps/250 VAC Output |
| 675-5 | AC Output Converter (400V Peak Output Rating) | 10-32 VDC Input 3 amps/250 VAC Output |
| 675-5H | AC Output Converter (600V Peak Output Rating) | 10-32 VDC Input 3 amps/250 VAC Output |
| 675-21 | DC Input Converter | 10-32 VDC Input |
| 675-22 | DC Output Converter | 4-10 VDC Input 3 amps/55 VDC Output |
| 675-23 | DC Output Converter | 10-32 VDC Input 3 amps/55 VDC Output |

TELEDYNE RELAYS

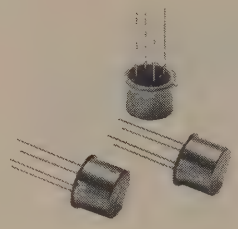
# TELEDYNE RELAYS

# Military Solid State Relays

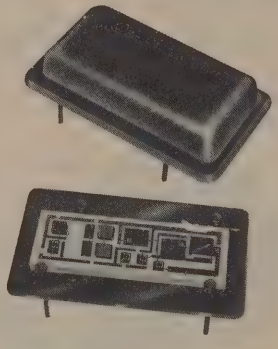
## M640 Series Solid State TO-5 Relays



Hermetically sealed subminiature solid state relays in TO-5 package. SPST, normally open. Features all solid state circuitry utilizing hybrid microcircuit techniques, with high input/output isolation (1000 V/$10^9$ Ohms). Available with bipolar output for AC or DC loads up to 40V/60mA or DC output for loads up to 40VDC/300mA or 250VDC/100mA. Mil-qualified to MIL-R-28750/5, 6, and /7.

| MILITARY PART NUMBER | TELEDYNE PART NUMBER | OUTPUT RATING |
|---|---|---|
| M28750/5 | M640-1W | 40 V/60 MA (bipolar, AC or DC) |
| M28750/6 | M643-1W | 40 VDC/300 MA |
| M28750/7 | M643-2W | 250 VDC/100 MA |

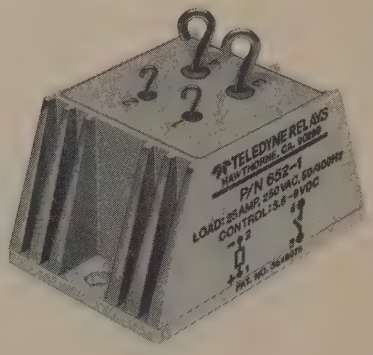
## 680 Series - AC and DC Solid State DIP Relays – Optically Isolated



Hermetically sealed in low profile metal DIP enclosures to withstand military and aerospace environments. Utilize thick film hybrid microcircuit construction techniques. Series includes Model 682-1 for AC loads up to 1A/250VRMS, and Model 683-1 for DC loads up to 600 mA/50VDC. Low level constant current input circuit minimizes power dissipation and provides logic compatibility. SPST, normally open.

| PART NUMBER | INPUT VOLTAGE RANGE | OUTPUT RATING | APPLICABLE MIL SPEC |
|---|---|---|---|
| 682-1 | 3-16 VDC | 1A/250VAC (45-440Hz) | MIL-R-28750/9 |
| 683-1 | 3-15 VDC | 600mA/50VDC | MIL-R-28750/8 |

## 652 Series - 25 Amp/250 VAC Solid State Relays – Optically Isolated



Hermetically sealed in a thermally efficient aluminium case to withstand Military and Aerospace environments. SPST, normally open. Features output switching by means of inverse/parallel SCRs for reliable operation over frequency range of 45-440Hz. Logic compatible drive circuit precludes need for external relay drivers. Synchronous/zero voltage turn-on to minimize RFI. Meets the requirements of MIL-R-28750, and is designed to operate within all categories of MIL-STD-704A Aircraft Power Limits.

| INPUT VOLTAGE RANGE | PART NUMBERS |
|---|---|
| 3.8- 9 VDC | 652-1 |
| 9-32 VDC | 652-3 |

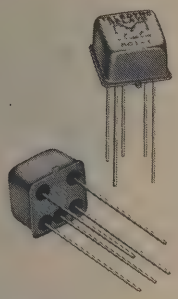
## Military Opto-Coupler

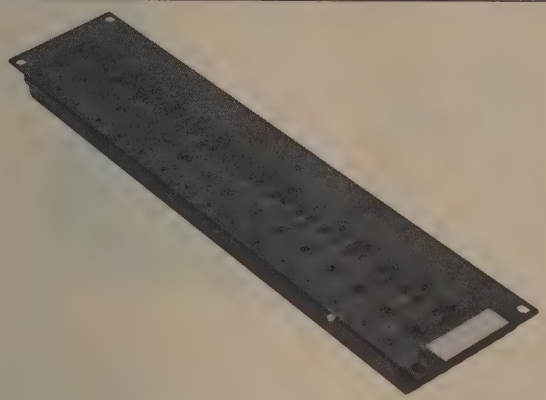


### 801-1 Iso-Cube™
### Military Optically Coupled Isolator

Packaged in a low profile hermetically sealed case, .225" (5.72mm) high by .370" (9.4mm) square, with pin-out on .100" grid centers for ease of pc board layout. Employing unique construction techniques developed for Teledyne hybrid SSRs, the miniature Iso-Cube provides the highest input/output isolation available in a military style coupler.

| PERFORMANCE FEATURES | |
|---|---|
| Isolation | 1500 VRMS |
| Transfer Ratio | 140% |
| Output Voltage | 40V min. |

## Mounting Panel For 671 and 673 Series I/O Converters



Custom designed mounting panel for Teledyne 671 and 673 Series Solid State I/O Converter Modules. Fits standard 19" rack and accepts up to 16 modules. Panel contains integral interconnect wiring for logic circuitry.

(See Solid State AC & DC I/O Converters section for description of 673 Series I/O Converter Modules)

PART NUMBERING

- 671P-2 Rear mounted connector
- 671P-4 Top mounted connector
- 671P-7 Rear mounted connectors (2) (For Multiplexing)

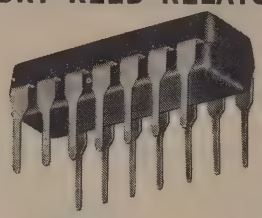
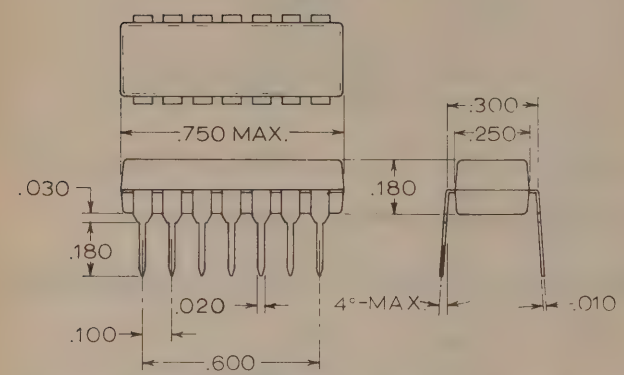
# DIP PACKAGE DRY REED RELAYS

## 814 SERIES





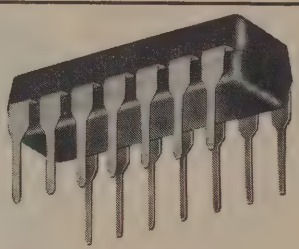
The 814 Series offers dry reed reliability and total isolation in a low profile IC type package, with DTL/TTL compatible coil drive available in most configurations.

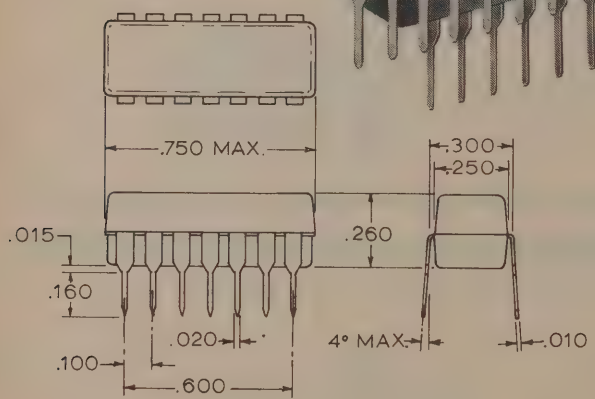
**SPECIFICATIONS — Contact Rating:** 28 VDC or 0.110 Amps (switching); 3 watts; 200 milliohms max. initial contact resistance; 200 Volt pk. bkdn. **Temperature:** −55°C to +105°C. **Shock:** 100G max., 8±1 mSec. ½ wave. **Vibration:** 20G @ 10-5000 Hz. **Insulation Resistance:** $10^{10}$ Ohms min. **Capacitance:** 0.2 pf. **Operate Time (Typical):** to 0.5 mSec. **Release Time (Typical):** 0.1 mSec. **Life Expectancy:** 50 x $10^6$ operations at signal level; 1 x $10^6$ operations at rated load.

| Contact Form | Nom. Voltage | Max. Voltage | Coil Resistance ±10% ▲ | Part Number |
|---|---|---|---|---|
| 1A | 5 | 16 | 365 | 814-101 |
| | 5 | 19 | 500 | 814-102 |
| | 6 | 19 | 500 | 814-103 |
| | 12 | 24 | 800 | 814-104 |
| | 24 | 30 | 1,250 | 814-105 |

▲Measured at 25°C.

## 815 SERIES





The 815 Series, with a profile slightly higher than the 814, offers increased versatility while maintaining the DIP package approach to hi-density printed circuit applications. Standard part numbers listed are subject to specifications shown for the 814 Series, however, the 815 has the capacity to offer dry reed switches to ½ Amp rating plus up to a 100 VDC max. switching voltage. Optional features include diode suppression, magnetic shielding and electrostatic shielding.

| Contact Form | Nom. Voltage | Max. Voltage | Coil Ohms ±10%▲ | Part Number |
|---|---|---|---|---|
| 1A | 5 | 14.1 | 200 | 815-101 |

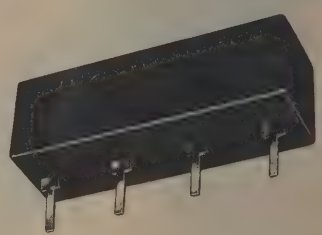
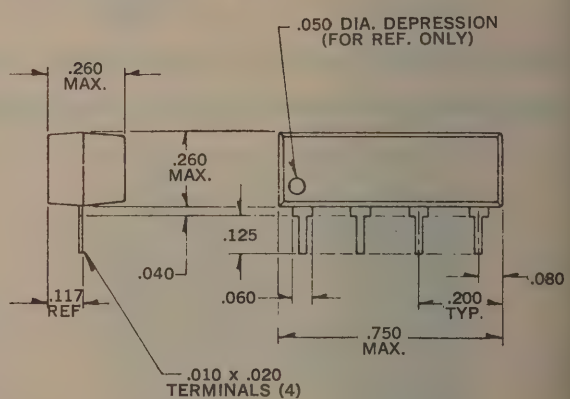
| | 12 | 19 | 500 | 815-242 |
| | 24 | 38 | 2,000 | 815-243 |

## 816 SERIES





The 816 Series SIP (Single Inline Package) provides the power handling capabilities of the 815 DIP while taking up less printed circuit board space. Standard part numbers listed are subject to specifications shown for the 814 Series; however, the 816 has the capacity to offer dry reed switches with ratings to 0.5 amps and 100 VDC. Optional features include diode suppression and magnetic shielding.

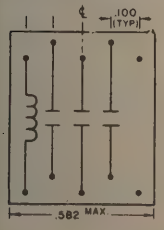
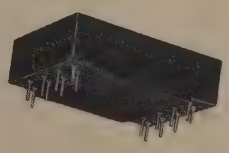
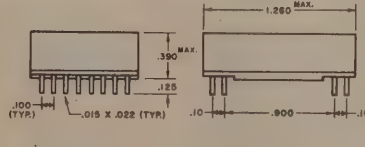
▲ Measured at 25°C.
† All relays containing magnets for Form B operation (including the break-before-make 1C) are polarity sensitive and correct polarity must be observed. Dot on relays indicates positive terminal.
‡ A positive voltage must be applied to either dot terminal to close the contact(s) of a latch relay.
A negative voltage must be applied to either dot terminal to open the contact(s) of a latch relay.

# 824 SERIES RR







The 824 Series miniature reed relay is available in 1 pole through 6 pole standard configurations of forms A, B, or C, offering staggered pin spacing to minimize PC board space required. (3A pinout illustrated.) Call Wabash Relay for complete details.

**SPECIFICATIONS — Contact Ratings:** (max.) 200 VDC, 150 VAC, 0.5 Amp (switching), 3 Amp (Carry), 10 Watts DC, 25 V-A (AC suppressed), 300 Volts peak breakdown, 200 milliohms max. initial contact resistance. **Temperature:** −55°C to +105°C. **Shock:** 200 G max., 11±1 mSec. **Vibration:** 30 G max. @ 0 to 1700 Hz. **Insulation Resistance:** $10^9$ Ohms min. **Capacitance:** 0.5 pf. **Life Expectancy:** 100 x $10^6$ ops @ dry ckt.; 50 x $10^6$ ops @ signal levels; 20 x $10^6$ ops @ rated load.

▲Measured at 25°C.
†All relays containing magnets for Form B operation (including the break-before-make 1C) are polarity sensitive and correct polarity must be observed. Dot on relays indicates positive terminal.

‡A positive voltage must be applied to either dot terminal to close the contact(s) of a latch relay.
A negative voltage must be applied to either dot terminal to open the contact(s) of a latch relay.

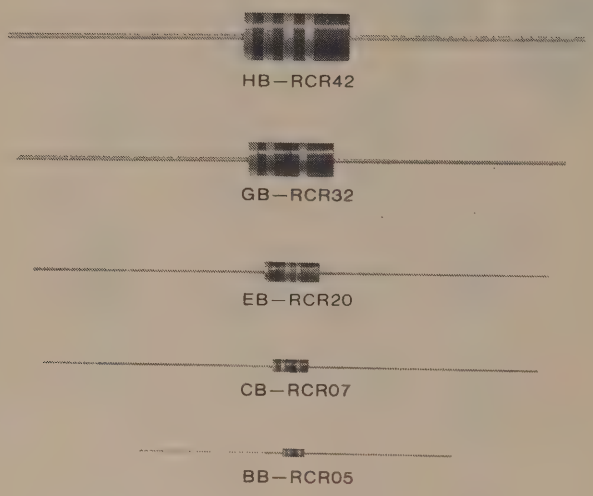
# Allen-Bradley Hot-Molded Fixed Resistors



Allen-Bradley hot-molded composition resistors are high quality units intended for general purpose use in the electronics industry.

Allen-Bradley Style RCR resistors not only meet al requirements of MIL-R-39008 but also exceed the S level (best level) of Established Reliability of 0.001% failure rate per 1000 hours. And only Allen-Bradley resistors are available in S level reliability in all five wattage sizes over the entire resistance range. The S reliability level is indicated by a yello 5th color band on the resistor body.

Metal-clad hot-molded resistors (Types GM and HM are fitted with metal clamps which surround the major portion of the resistor. The metal clamps provide rigid mounting and efficient heat transfer from the resistors to the metal chassis or panels on which they are mounted.

**For more information request Publication EC21.**

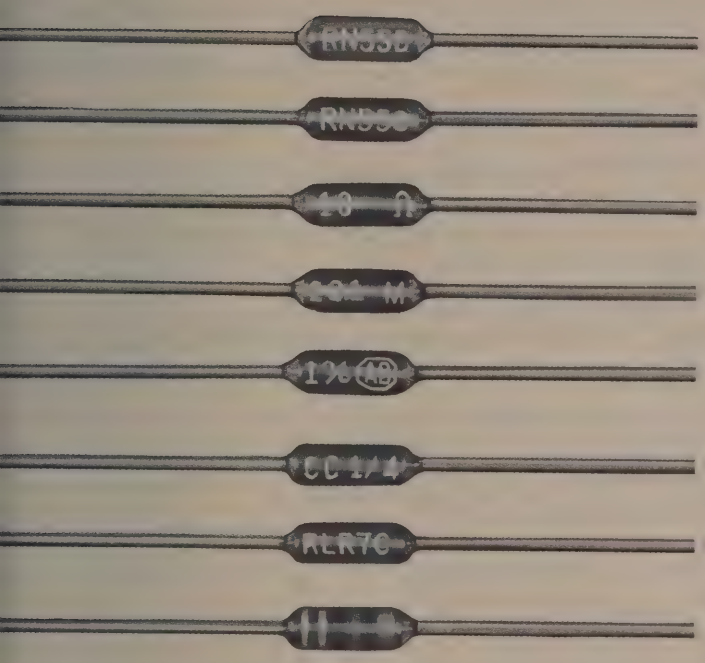
(Types GM-HM Only)

# Allen-Bradley Cermet Film Fixed Resistors

## TYPE CC



**Capless** design provides a reliable termination that does away with problems associated with end cap construction.

**Leads** are designed for both soldering and welding to give you freedom of choice about attachment, and long term storage capability.

**Cores** are high purity alumina with outstanding physical and thermal properties to reduce the incidence of fractures.

**Coating** is specially formulated to maintain outstanding insulation properties throughout environmental exposures.

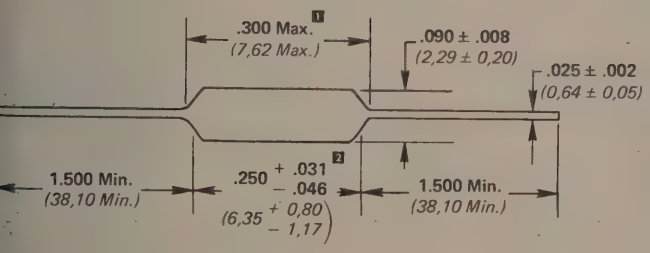
**Markings** are clear, crisp and precise; dual resistance marking for easy identification, and durable to withstand production handling.

**For more information request Publication EC33.**

## This one resistor can shrink your inventory costs

### DIMENSIONS

**Basic dimensions in inches. Dimensions shown in *ITALICS* are in millimeters.**



[1] Maximum length is "clean lead" to "clean lead"
[2] The end of the body is that point at which the body diameter equals .038 *(0,97)*

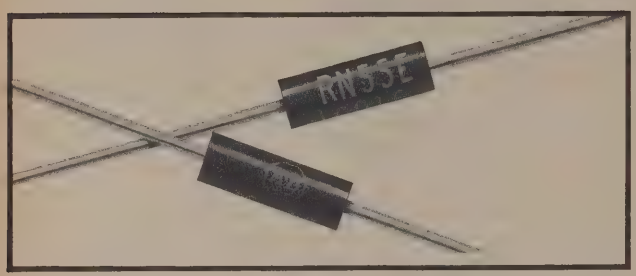
# Allen-Bradley Precision Metal Film Fixed Resistors

## TYPE FM



- Precision characteristics
- Uniform molded body
- Low temperature coefficient
- Tight tolerance

The Type FM, featuring the accuracy and stability of metal film technology, provides the tight tolerances, low temperature coefficients, minimal voltage coefficient, low noise, and stable performance that may be required for precision applications.

| 82 | 360 | 1500* | 6000 | 24K | 100K* | |

### HOW TO ORDER

Example: Require Series 314A with resistance value=1000Ω.
Order part #314A102.

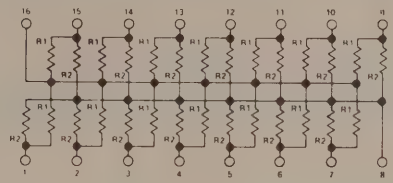
### ± 1% TOLERANCE

The values marked with an asterisk of Series 314A, 314B, 316A and 316B in the table above are available with ±1% tolerance. Add the letter "F" on the end of the part number to indicate the optional ±1% tolerance.

## STANDARD NETWORKS • PARALLEL • TERMINATION

### APPLICATIONS:

Series 314E and 316E networks are used in digital IC logic circuits and are especially suited for ECL and TTL applications. For ECL applications the network's circuit configuration serves a dual purpose. The R2 resistors are pull-down resistors and are normally tied to the most negative supply voltage. The R1 resistors, in parallel with the R2 resistors, provide the characteristic impedance for proper transmission line matching. In TTL logic the networks are used in pulse squaring applications.



**314E—14 pin DIP, 24 resistors**
**316E—16 pin DIP, 28 resistors**

## STANDARD RESISTANCE VALUES— SERIES 314E and 316E

| R1/R2 | Characteristic Impedance $Z_o$ | R1/R2 | Characteristic Impedance $Z_o$ |
|---|---|---|---|
| 81/130 | 50 | 220/330 | 132 |
| 120/200 | 75 | 330/390 | 179 |
| 90/660 | 80 | 330/470 | 194 |
| 130/210 | 80 | 330/680 | 222 |
| 160/260 | 100 | 1.5K/3.3K | 1.03K |
| 220/270 | 121 | 3K/6.2K | 2.02K |
| 180/390 | 123 | | |

### HOW TO ORDER

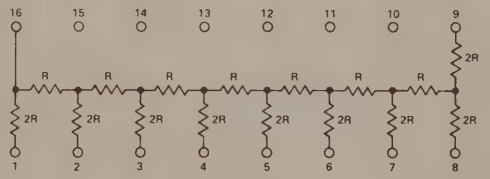
Example: Require Series 316E with characteristic impedance=50Ω.
Order part #316E810131.

## 8 BIT R/2R LADDER NETWORKS

### APPLICATIONS:

- Designed for use with D/A and A/D convertors with bipolar or CMOS switches.

| Part No. | R Value |
|---|---|
| 316L08253 | 25K |
| 316L08503 | 50K |
| 316L08104 | 100K |



**316L08**

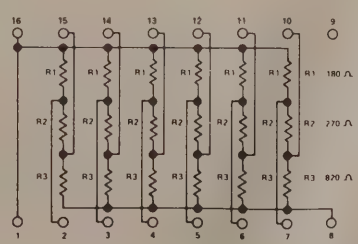
### HOW TO ORDER

Example: Require Series 316L08 with 100K ladder impedance.
Order part #316L08104.

## STANDARD TTL TO ECL TRANSLATOR NETWORK

### APPLICATIONS:

- Series 316T110 provides TTL to ECL translation.
- Contains six TTL to ECL translators.



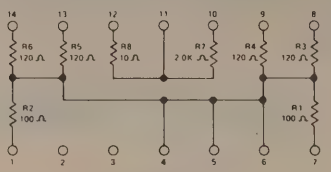
**316T110**

# STANDARD NETWORKS • SENSE AMP • INTERFACE

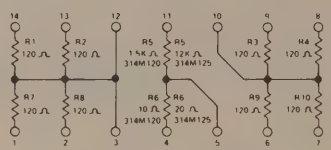
## APPLICATIONS:

- Designed for use with 7520 series core memory sense amplifiers
- Series 314M110 combines a threshold setting divider with balanced sense line termination and far end termination of two sense lines
- Series 314M120 and 314M125 combine threshold setting dividers with four sense line termination Following resistor values provide different threshold setting

| Resistor | 314M120 | 314M125 |
|---|---|---|
| R5 | 1.5KΩ | 12KΩ |
| R6 | 10Ω | 20Ω |



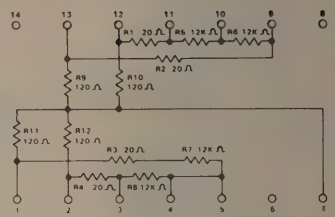
314M110



314M120 or 314M125

## APPLICATIONS:

- Series 314M130 designed for use with μA711 dual voltage comparator in core memory sense amplifier applications
- Combines four threshold dividers with balanced termination of two lines



314M130

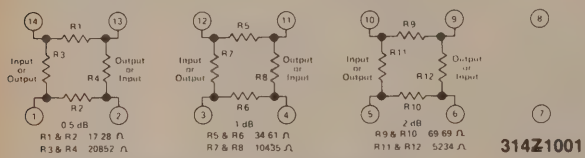
# STANDARD "O" PAD (BALANCED π) ATTENUATORS

## APPLICATIONS:

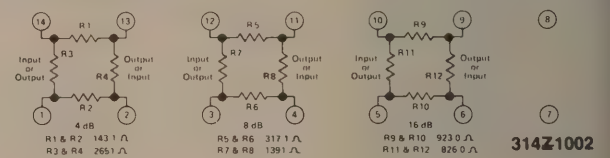
These networks are used primarily in the communications industry where a fixed voltage attenuation is required with impedance matching. Voltage attenuation in steps of 0.5 dB from 0.5 dB to 31.5 dB can be obtained from the Series 314Z networks by the use of one "O" pad, or by placing two or more in series. For example, 20 dB is obtained by placing the 4 dB and 16 dB sections in series.

## SPECIFICATIONS:

| | |
|---|---|
| Characteristic Impedance | 600 ohms |
| Attenuation Tolerance (dB) | ±1% |
| Attenuation Change Due to Temperature | ±1% Additional |
| Resistor Tolerance | ±1% |
| Temperature Coefficient of Resistance | ±200 ppm/°C |
| Power Dissipation Rating at 40°C | 150 mw per Attenuator |
| Frequency Response | Flat to 1 MHz |
| Operating Temperature | 0°C to +70°C |



314Z1001



314Z1002

# INTERCONNECT NETWORKS

## APPLICATIONS:

- Shorting
- Matrix interconnections

314X101—14 pin DIP

- Also available in 16 pin DIP as 316X101
- Other interconnect network configurations available

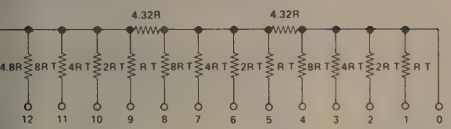
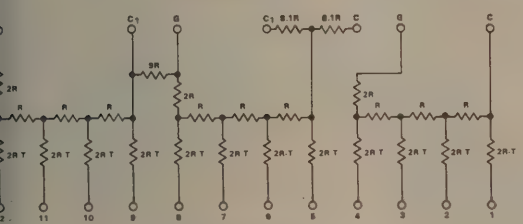
| Operating Voltage Range | ±100V Maximum | ±70V Maximum | ±70V Maximum | ±30V Maximum | ±20V Maximum | ±20V Maximum |

(1) May be used with Fairchild 3750/3751 IC
(2) May be used with Fairchild 3750 IC

## 1-2-4-8 BCD CODE LADDER NETWORKS



FN130



FN128 and FN129

### APPLICATIONS:

- All ladders—A/D and D/A conversion.

| Part Number | FN128 (1) | FN129 (1) | FN130 |
|---|---|---|---|
| Number of Bits | 12 | 12 | 12 |
| Ladder Resistance Value (R) | R=50K<br>$T_{1\text{-}2}$=500Ω<br>$T_{3\text{-}12}$=500Ω | R=100K<br>$T_{1\text{-}2}$=500Ω<br>$T_{3\ 12}$=550Ω | R=10K<br>T=0 |
| Ladder Resistance Tolerance | ±10% | ±10% | ±10% |
| Network Full Scale Accuracy | ±½ LSB | ±½ LSB | ±½ LSB |
| Operating Temperature Range | −55°C to +125°C | −55°C to +125°C | −55°C to +125°C |
| Storage Temperature Range | −65°C to +175°C | −65°C to +175°C | −65°C to +175°C |
| Operating Voltage Range | ±100V Maximum | ±140V Maximum | ±20V Maximum |

(1) May be used with Fairchild 3750/3751 IC

## VOLTAGE DIVIDER NETWORK

(Decade Attenuator)

### APPLICATIONS:

FN207—Input attenuation and range selection in digital instrumentation, particularly in digital voltmeters and multimeters.

Resistance Tolerance on Total Resistance ($R_T$) at +25°C
$R_T = R_1 + R_2 + R_3 + R_4 + R_5$=10 Megohms ±0.05%.

Ratio Tolerance at +25°C and from 0 to 1000 volts.

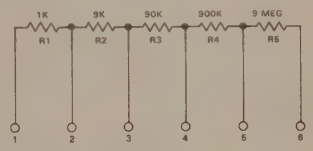
$$\frac{R_1 + R_2 + R_3 + R_4}{R_T} = \frac{1\ \text{Megohm}}{10\ \text{Megohms}} = 0.1\ \pm 0.03\%$$

$$\frac{R_1 + R_2 + R_3}{R_T} = \frac{100\ \text{K ohms}}{10\ \text{Megohms}} = 0.01\ \pm 0.03\%$$

$$\frac{R_1 + R_2}{R_T} = \frac{10\ \text{K ohms}}{10\ \text{Megohms}} = 0.001\ \pm 0.03\%$$

$$\frac{R_1}{R_T} = \frac{1\ \text{K ohm}}{10\ \text{Megohms}} = 0.0001\ \pm 0.03\%$$

| | |
|---|---|
| Temperature Coefficient of Resistance | ±25 ppm/°C |
| TCR Tracking | ±5 ppm/°C |
| Operating Voltage (between pins 1 & 6) | 1000 volts max. |
| Operating Temperature | 0°C to +70°C |
| Storage Temperature | −65°C to +175°C |



FN207

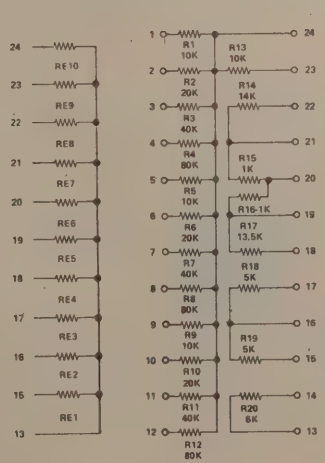
## CURRENT SUMMING NETWORKS PRECISION RESISTOR ARRAYS

### APPLICATIONS:

- A/D and D/A conversion.
- FN111*—10 bit binary operation.
- FN112*—3 place BCD operation (0 to 399).
- FN215—12 bit conversion—designed for use with Fairchild μA9650 IC.
- FN226**
- FN227**

*Both designed for use with Fairchild μA722 IC.

**Both designed for use with Intersil ICL 8018, 8019, 8020 IC's. FN226 gives 8 bit conversion. FN226 plus FN227 gives 12 bit conversion.



FN111 and FN112

A-B QUALITY

# ALLEN-BRADLEY

1201 South Second Street
Milwaukee, Wisconsin 53204

# CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
# DER PRODUKTKATALOG FÜR ELEKTRONIKER
# ELECTRONIC ENGINEERS CATALOGUE

**The 1978 edition is out...and the response is in...**
**IMMEDIATE AND OVERWHELMING**

**ACCEPTANCE**

The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to—and from—Western Europe.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 product headings & cross-references alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

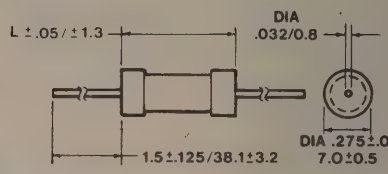
# ACI CARBON FILM HIGH VOLTAGE RESISTORS

## T SERIES / CARBON FILM HIGH VOLTAGE RESISTORS



### Features

- Low cost, cap and lead type
- Ratings to 3 w, 15 kV, ±5%

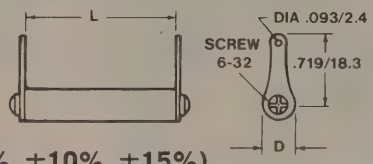
### General Purpose Types (±5%, ±10%, ±15%, ±20%)

| ACI Type | Power (watts) @ 25°C | Voltage Rating (kV) | Resistance (ohms) Min. | Resistance (ohms) Max. | Dimensions L in | Dimensions L mm | Dimensions D in | Dimensions D mm |
|---|---|---|---|---|---|---|---|---|
| TAEW | 0.5 | 3.0 | 1M | 1G | 0.80 | 20.3 | 0.275 | 7.0 |
| TAFW | 1.0 | 5.0 | 1M | 1G | 1.05 | 26.7 | 0.275 | 7.0 |
| TAKW | 1.5 | 7.5 | 1M | 1G | 1.55 | 39.4 | 0.275 | 7.0 |
| TAOW | 2.0 | 10.0 | 1M | 1G | 2.05 | 52.1 | 0.275 | 7.0 |
| TAQW | 2.5 | 12.5 | 1M | 1G | 2.55 | 64.8 | 0.275 | 7.0 |
| TARW | 3.0 | 15.0 | 1M | 1G | 3.05 | 77.5 | 0.275 | 7.0 |

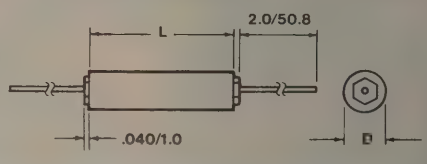
Note: T Series is supplied with .002" (.05mm) thick mylar protective sleeve.

## B SERIES / CARBON FILM HIGH VOLTAGE RESISTORS

Style A (Dimensions — in/mm)



Style B (Dimensions — in/mm)



### Features

- Single units to 10 w, 40 kV, ±3%
- Matched pairs to 20 w, 80 kV, ±1%
- Radial lug or axial lead

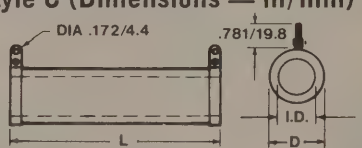
### General Purpose Types (±3%, ±5%, ±10%, ±15%)

| ACI Type | Power (watts) @ 25°C | Voltage Rating (kV) | Resistance (ohms) Min. | Resistance (ohms) Max. | Dwg. Style | Dimensions L in | Dimensions L mm | Dimensions D in | Dimensions D mm |
|---|---|---|---|---|---|---|---|---|---|
| BAEW | 0.5 | 2.5 | 10K | 1G | B | 0.75 | 19.1 | 0.250 | 6.4 |
| BAKW | 1.0 | 5.0 | 20K | 2G | B | 1.50 | 38.1 | 0.250 | 6.4 |
| BBF | 1.0 | 3.5 | 10K | 10G | A | 1.00 | 25.4 | 0.313 | 8.0 |
| BBFW | 1.0 | 3.5 | 10K | 10G | B | 1.00 | 25.4 | 0.313 | 8.0 |
| BBM | 2.0 | 7.5 | 10K | 25G | A | 1.75 | 44.5 | 0.313 | 8.0 |
| BBMW | 2.0 | 7.5 | 10K | 25G | B | 1.75 | 44.5 | 0.313 | 8.0 |
| BBR | 3.0 | 15.0 | 20K | 25G | A | 3.00 | 76.2 | 0.313 | 8.0 |
| BBRW | 3.0 | 15.0 | 20K | 25G | B | 3.00 | 76.2 | 0.313 | 8.0 |
| BBV | 5.0 | 30.0 | 40K | 25G | A | 5.50 | 139.7 | 0.313 | 8.0 |
| BFQ | 4.0 | 15.0 | 20K | 25G | A | 2.50 | 63.5 | 0.563 | 14.3 |
| BFT | 6.0 | 25.0 | 40K | 25G | A | 4.00 | 101.6 | 0.563 | 14.3 |
| BFW | 10.0 | 40.0 | 70K | 25G | A | 6.50 | 165.1 | 0.563 | 14.3 |

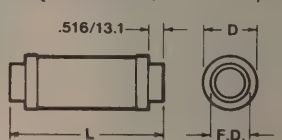
Notes: Both Style A and Style B are supplied with .002" (.05mm) thick Mylar protective sleeve.
Style B axial leads are #20 AWG tinned copper. Dimensional tolerances are ±.016"/.4mm or ±1%, whichever is greater

## D SERIES / CARBON FILM HIGH VOLTAGE RESISTORS

Style C (Dimensions — in/mm)



Style D (Dimensions — in/mm)



### Features

- Ratings to 100 w, 125 kV, ±3%
- Radial bands or ferrule terminals

### General Purpose Types (±3%, ±5%, ±10%, ±15%)

Note: Style C and D are normally supplied without protective sleeves; an .055" (1.4mm) thick vinyl sleeve is available upon request.
Dimensional tolerances are ±.016"/.4mm or ±1%, whichever is greater
Above are shown the most popular series but many other standard series are available. They include BP (Matched Pairs), E (Encapsulated), F&G (High Frequency), H (High Megohm) and HS (Sealed High Megohm). Contact the factory for additional information.

# ACI SPECIAL PRECISION METAL FILM RESISTORS

## UAR* PRECISION METAL FILM RESISTORS

### Features

- Temperature Coefficients of 0 ±5 ppm Standard
- Tolerances to ±0.1%
- Range from 20 Ohm to 1 Megohm
- Operating Temp. Range −20°C to +85°C
- Temperature Coefficient and Tolerance Matching
- Replacements for Precision Wirewounds

*Ultra Accurate Resistors

### Typical Performance

| | |
|---|---|
| Load Life: 1000 hrs. @ 85°C | .03% △R |
| Temperature Cycle: −55°C to +85°C | .02% △R |
| Humidity: MIL Std. 202, Method 106 | .02% △R |
| Noise Index | <.05 μv/v |
| Voltage Coefficient | .02 ppm/volt |
| Short Term Overload: 2.5x Rated Volt, 5 Sec. | .05% △R |
| Low Temp. Operation: −65°C @ Rated Load | .02% △R |

### Characteristics

| ACI Type | Resistance Range (ohms) | Temperature Coefficients −20°C to +85°C (±ppm/°C) | Tolerances % | Power Rating @ 85°C (watts) | Voltage Rating (volts) | Dimensions in Inches | | |
|---|---|---|---|---|---|---|---|---|

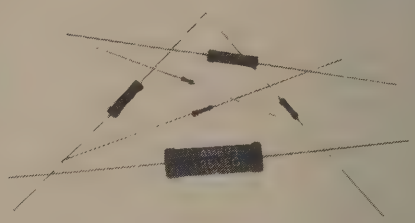
Leads are OFHC tinned copper.
Consult factory for alternate material.

**Lead Length 1.00 ±.062.

## AME HIGH RANGE CONFORMAL COATED METAL FILM RESISTORS



### Features

- Ranges to 30 Megohm
- Tolerances to ±0.1%, with ±1.0% Standard
- Shelf Life Aging of Less than 0.1% per Year Typical
- Noble-Met® Film with Inherently Low Noise
- Sizes from 1/20 Watt to 1.0 Watt
- Meet or Exceed Requirements of MIL-R-10509 and MIL-R-55182
- Temperature Coefficient to 0 ±25 ppm, with 0 ±100 ppm Standard

### Characteristics

| ACI Type | *MIL-R-10509 & *MIL-R-55182 | Power Rating (watts) Mil. | Power Rating (watts) Commercial | Resistance Range (ohms) | Voltage Rating (volts) | Dimensions in Inches | | | | |

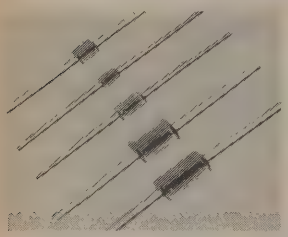
# PRECISION METAL FILM RESISTORS

## Hermetically Sealed per MIL-R-55182 Characteristics C and E
## Hermetic Glass-to-Metal Seal — Failure Rates M (1%) thru S (0.001%)



### FEATURES

- High stability
- Hermetic enclosure
- Inert gas environment
- In accordance with MIL-R-55182, Styles RNR and RNN
- Extended life and reliability
- 1/10, 1/8, 1/4, 1/2 watt sizes (5 case sizes)

### APPLICATIONS

Aerospace, military, oceanography . . . wherever the application or environment demands the ultimate in resistor reliability, Angstrohm's hermetically sealed metal film resistors are unquestionably first-choice. The HN glass-to-metal hermetic seal protects the resistance element from virtually any adverse environmental influence, and will withstand in excess of 3,000 p.s.i. external pressure without leakage.

### SPECIFICATIONS

**MIL-Specifications:** RNR/RNN style resistors are designed to exceed the requirements of MIL-R-55182 for characteristics C and E.

**Power Rating:** All RNR/RNN resistors are based on full rated load at an ambient of 125°C.

**Resistance Tolerances:** The standard resistance tolerances are ±1.0% (F), ±.5% (D), and ±.1% (B) per Q.P.L. 55182. Consult factory for tighter tolerances and special matching.

**Resistance Values:** See Table 1 for range of resistance values. Standard values can be obtained from the resistance decade shown in Table. 2.

**Derating:** For ambients above 125°C, see Derating Curve.

Applied voltage shall not exceed $\sqrt{PR}$. See Table 1.

### RATINGS AND DIMENSIONS

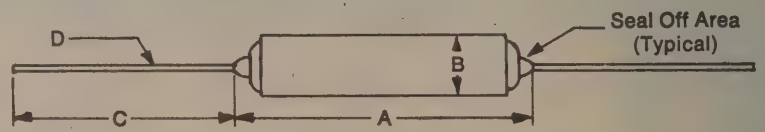


TABLE 1

| Designations | | Watt Rating @125°C | Volts Max. | Resistance Range in Ohms† | | Approx. Dimensions (in inches) | | | | Weight GMS (approx.) |

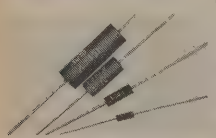
*See Lead options under "Characteristics" below.
† Consult Factory for extended ranges.

## series SAR* precision metal film resistors



Angstrohm "SAR" thin metal film resistors are designed for hi-reliability, hi-precision, and long life applications and exceed the specifications and performance requirements of MIL-R-55182 and MIL-R-10509. The latest state-of-the-art materials and methods are utilized in their manufacture including improved metal film deposition technology, laser helixing, special moisture resistant undercoatings and flame retardent vacuum transfer molding.

The "SAR" resistor is ideal for high frequency and pulse applications requiring low reactance, low noise (−40 db typical) and low voltage coefficients (.02PPM/volt typical). "SAR" resistors are also capable of withstanding pulse overloads of up to fifty times rated power for 500 msec.

* Super Accurate Resistor

### SPECIFICATIONS

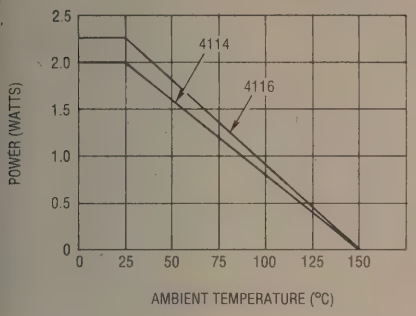
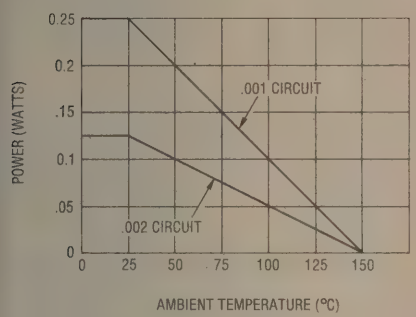
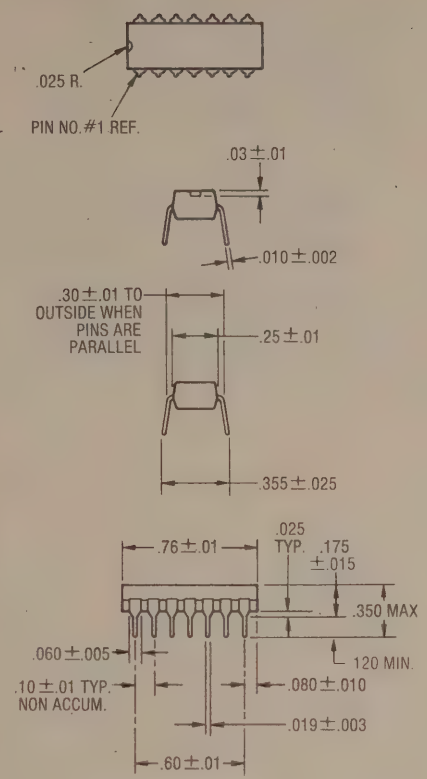
## PACKAGE POWER-TEMPERATURE DERATING CURVE



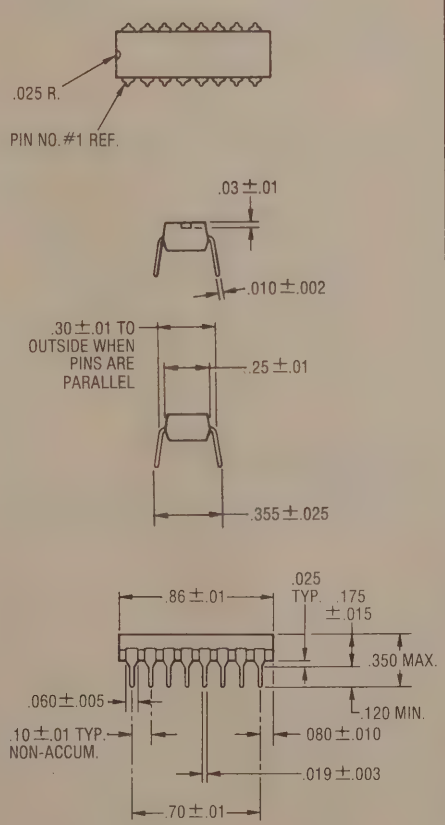
## SINGLE RESISTOR POWER-TEMPERATURE DERATING CURVE



## 4114 OUTLINE



## 4116 OUTLINE



Specifications are subject to change without notice.

## HOW TO ORDER

Example — A 16-pin, 15-resistor DIP network, 22K ohms per resistor is Model 4116R-002-223. The last three digits are the code for the resistance value — the first two digits designate the significant numbers (22), and the last digit gives the number of zeros that follow (3). So, -223 translates to 22,000 ohms.

## STANDARD RESISTANCES

| | | 4116R-003-181/391 | 16 Pin |

Other resistor values available.

The BOURNS® Models 4114R-003 and 4116R-003 Resistor Networks are designed for TTL dual line termination. These models improve noise immunity where capacitive effects are excessive. The 4114R-003 network is a standard 14 pin DIP configuration and terminates 12 lines. The 4116R-003 is a 16 pin DIP configuration and terminates 14 lines.

The dual terminators consist of 24 (4114R-) or 28 (4116R-) thick film resistors. Pins 7 (or 8) and 14 (or 16) are common for ground and power respectively. Each series-pair of resistors is connected between the common lines. The center of these resistor pairs are connected to input terminals. Replaces the Beckman 899/898-5, the CTS 760/761-5, the Sprague 914/916C-5TR networks, and the Allen-Bradley 34E/36E networks.

**Electrical Specifications**

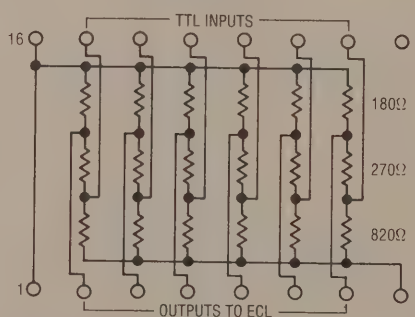
## TTL TO ECL TRANSLATOR 16 PIN DUAL-IN-LINE PACKAGE MODEL 4116R-008



| Standard Resistances Resistance (Ohms) | | | Part Number |
|---|---|---|---|
| $R_1$ | $R_2$ | $R_3$ | |
| 180 | 270 | 820 | 4116R-008-001 |

The BOURNS® Model 4116R-008 Resistor Network provides translation from TTL to ECL integrated circuit logic. It is packaged in a standard 16 pin DIP configuration, with 18 thick film resistors interconnected as illustrated.

The translator design assumes both TTL and ECL are operating between a +5 volt power supply and ground. Six line capacity is provided in the 16 pin configuration. Replaces the Beckman 898-45 and the CTS 761-45.

**Electrical Specifications**

Resistance Tolerance ..... ±2%

Power Rating @ 25°C (See Derating Curve)

Package ..... 2.0 watts

Single Resistor ..... 0.125 watt

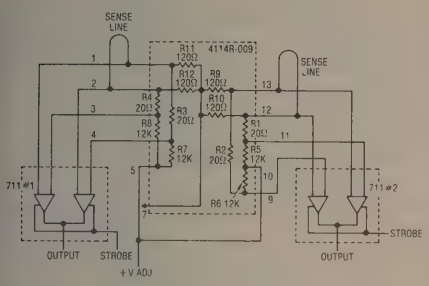
## 711 DUAL COMPARATOR TERMINATOR 14 PIN DUAL-IN-LINE PACKAGE MODEL 4114R-009



BOURNS® Model 4114R-009 Resistor Network is designed to provide threshold reference settings and balanced sense line termination for two 711 dual comparators . . . in core memory sense amplifier applications. The 4114R-009 is packaged in a compact 14 pin DIP configuration, utilizing Bourns ultra-reliable Krimp-Joint™ termination design.

In use, threshold voltage settings are established by the voltage drop across the 20 ohm resistors (20mv. at + V adj. of 12.14 volts). Sense line termination is 120 ohms. Replaces the Beckman 889-19 and the CTS 760-19.

**Electrical Specifications**

Resistance Tolerance . . Pins 7 to 10 and 5 to 7 = 6.07K ±2%

Threshold Voltage . . . . 20 ±1.0 MV Pin 7 at 0V; Pins 5 and 10 at 12.14V ±10 MV

+V Adj. . . . . 20V maximum

Power Rating @ 25°C

Package . . . . . 1.00 watt

Single Resistor . . . . . 0.080 watt

| 220 | 330 | 4308R-103-221/331 |

Other resistance values are available.

NOTE:

Also available in 6 and 10 pin configurations, consult with factory.

The Model 4308R-103 Molded Resistor Network is a unique offering from Bourns®. It provides TTL dual line termination in a low-cost epoxy molded SIP configuration. Dual terminators improve noise immunity where capacitive effects are excessive.

The 4308R-103 is an 8 pin configuration and terminates 6 lines. Pins 1 and 8 are common for ground and power, respectively. Twelve thick film resistors are paired in series between the common lines (pin 1 and 8). The center points of these resistor pairs are connected to input terminals (pin 2 through 7) Dual terminators are also available in standard 14 pin and 16 pin DIP models from Bourns®.

**Electrical Specifications**

Resistance Tolerance ..... ±5%
Power Rating @ 25°C
Package ..... 1.0 watt
Resistor Pair ..... 0.25 watt

## HOW TO ORDER

Example — An 8-pin, 12-resistor SIP Dual Terminator, with 220 ohms and 330 ohms values would be designed as: Model 4308R-103-221/331. The set(s) of 3 digits following the model number are the codes for resistance value — the first two digits designate the significant numbers (22) and (33) respectively, and the last digit gives the number of zeroes that follow (1). So, -221 translates to 220 ohms and 331 to 330 ohms.

### Standard Resistances

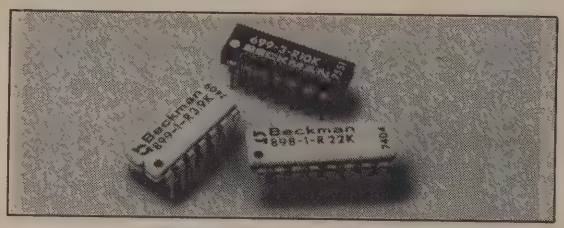
## Save Time, space and money with . . . RESNET™

# THICK and THIN FILM RESISTOR NETWORKS

Beckman RESNET™ thick or thin film dual in-line, thick film single in-line, flatpack and custom resistor networks consist of various resistor configurations packaged in standard 14- and 16-pin DIPs, 6-, 8- and 10-pin SIPs. All offer:

- Significant reduction of "on the board" costs
- Space savings over individual resistors
- Significant reduction of procurement, inventory and quality control costs.
- Compatibility with automatic insertion equipment

## DIP RESISTOR NETWORKS



**Thick Film Series 899/898**

- 14-pin (899) and 16-pin (898) configurations
- Automatic insertion compatible
- Thick film reliability and performance
- ±2% (or ±2 ohms) resistance tolerance
- 0.15W (898/899-1, -5) or 0.250W (898/899-3) resistor power rating (+25°C)

**Precision Thin Film Series 698/699**

If your application requirements call for greater circuit stability than unmatched individual discrete resistors and tighter accuracy tolerances than thick film resistor networks, consider our precision film resistor networks. Series 698 and 699 feature:

- Low cost—from 65¢ at 1,000 piece price
- ±5 ppm/°C tracking
- Absolute resistance tolerance options from ±0.1% to ±1.0%
- ±50 ppm/°C tempco
- −40dB max. noise
- Negligible resistance voltco

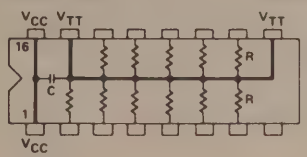
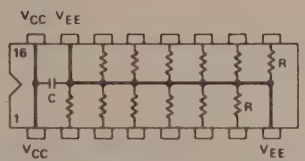
## STANDARD ECL TERMINATORS

**Series 898 16-Pin ECL Terminator DIPs**

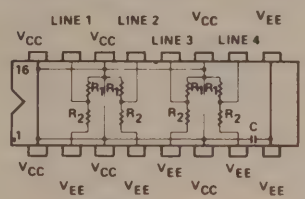
- Resistance tolerance: ±2% (or ± 2Ω)
- Resistor power rating: operation at $T_A$ = 85°C without heat/sinking
- Capacitor tolerance: +40%, −20%
- Capacitor voltage rating: 25V
- Temperature range: −30°C to +85°C



**898-41**
−20 Volt Terminators
R= 50Ω, 68Ω, 75Ω, and 100Ω



**898-42**
−5.2 Volt Terminators
R= 510Ω



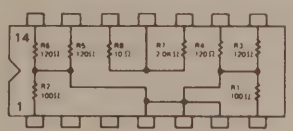
**898-43**
Thevenin Equivalent Terminators

| Model | R1 | R2 |
|---|---|---|
| 898-43-250 | 81 Ω | 130 Ω |
| 898-43-275 | 121 Ω | 195 Ω |
| 898-43-2100 | 162 Ω | 260 Ω |

## STANDARD DIP INTERFACE NETWORKS

**Model 899-17 14-Pin Sense Amp Terminator**

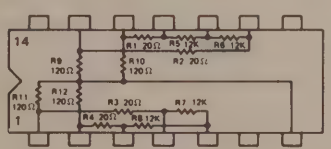
- Designed for 7520 series sense amps
- Resistor tempco: ±300 p/$10^6$ per °C
- Temperature range: 0°C to + 70°C



**899-17**
Sense Line Terminator
For 7520 Series Sense AMP

**Model 899-19 14-Pin Sense Amp Terminator**

- Designed for use in 711 dual comparator sense amp configuration
- Resistance tolerance: ±2%
- Threshold voltage: 2mV ±1mV
- +$V_{ADJ}$: 20V max.
- Temperature range: 0°C to +70°C



**899-19**
Sense Line Terminator
For μA711

## CUSTOM NETWORKS

Our large staff of applications/design specialists — all heavy in experience — can mix resistance values on the same substrate. Or give you capacitor networks, diode networks, resistor/capacitor or resistor/diode combinations. Even shorting bars.

To order, or for more information and free evaluation samples, call your nearest Beckman/Helipot distributor. Or phone (714) 871-4848, Ext. 1776.

Prices and specifications subject to change without notice.

| HFJ | 40,000 | 10 | 6½ | 9/16 | 1M | 100T | 1, 2 |

Standard Tolerances are 20%, 15%, 10% and 5% for the SF and SJ Series and 10%, 5% and 3% for the HF Series.

Resistors of greater than 10G, are provided with special coating to minimize effects of handling and humidity, no change in diameter.

All Dimensional Tolerances ±1/64 or 1% whichever is greater.

If units are to be operated near maximum limits, at elevated ambient, or in a coolant, order resistors without sleeving.

Special values or configurations are available upon request from Beman Manufacturing, Inc.

Special coatings available upon request.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

# High Performance Power Film Resistors

In 1962 Caddock Electronics introduced their axial lead resistors constructed with Micronox® resistance films. This advanced resistor technology has produced an extensive line of precision resistors with a combination of performance advantages:

- **Higher Power Ratings** — up to five times higher than other resistor technologies.
- **Higher Operating Temperatures** — up to +275°C.
- **Higher Resistance Values** — up to 10 times higher than other types of high precision resistors with matched temperature coefficients and standard configurations.
- **Exceptional Extended-Life Stability** — typically better than 0.01% per 1000 hours in extended life.
- **Improved Temperature Characteristics and Stability** — with lower temperature coefficients and closer TC matching.
- **Non-Inductive Design for Wide-Band, High Frequency Applications.**

Caddock's Exclusive Non-Inductive Design is also available in most models of Micronox® resistors. This special serpentine pattern provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.

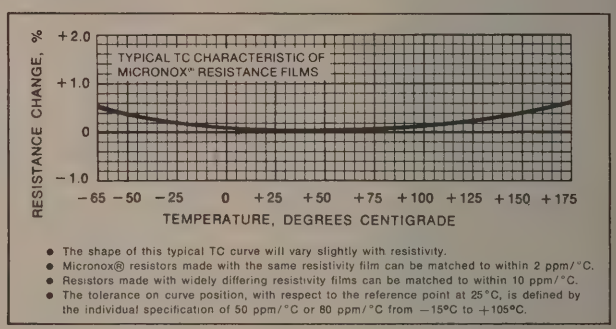
The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

To achieve these many performance advantages, special complex-oxide film resistance materials have been developed by Caddock that include resistivities as low as 35 ohms/square and as high as 400,000 ohms/square to provide resistors that cover an exceptionally wide range of values, sizes and power ratings.

The unique structure of these materials also provides excellent long-term stability and exceptional insensitivity to high temperature and thermal shock.

### Micronox® Film Resistors Include Special TC Characteristics for Improved Circuit Temperature Stability.

Inherent in the parabolic shape of the Micronox® TC curve is a temperature 'band' where the TC slope is effectively 'zero.' This unique 'zero TC' characteristic can provide an immediate improvement in circuit stability in many applications.



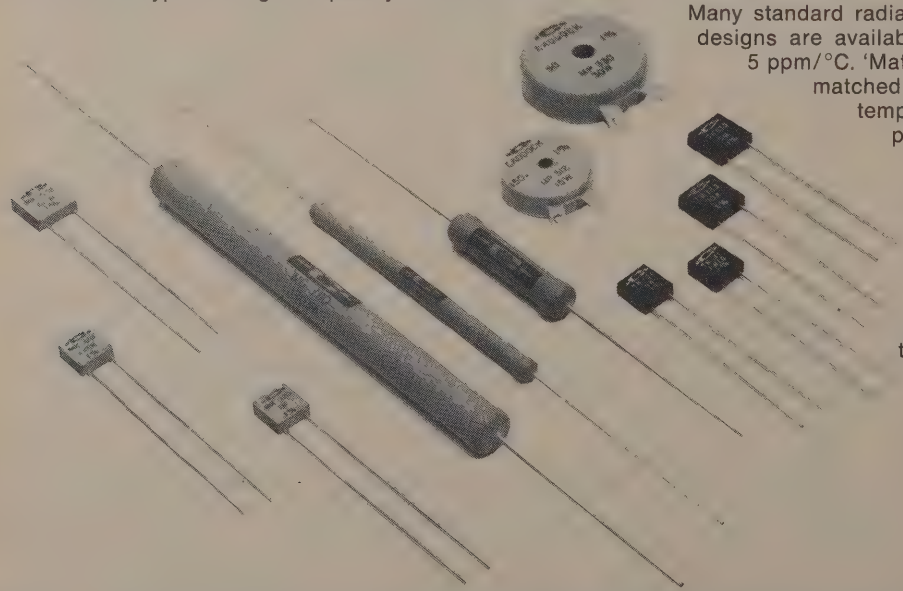
- The shape of this typical TC curve will vary slightly with resistivity.
- Micronox® resistors made with the same resistivity film can be matched to within 2 ppm/°C.
- Resistors made with widely differing resistivity films can be matched to within 10 ppm/°C.
- The tolerance on curve position, with respect to the reference point at 25°C, is defined by the individual specification of 50 ppm/°C or 80 ppm/°C from −15°C to +105°C.

### Tetrinox™ Film Resistors Provide Outstanding Load-Life Stability and TCs Lower Than 5 PPM/°C.

Caddock Electronics has recently introduced an advanced resistive system designated as the T-System™. Resistors using this highly stable, ultra-low TC resistance film are being widely used in advanced instrumentation, control, communication and computer systems.

Many standard radial-lead and single-in-line resistor designs are available with TCs of 10 ppm/°C and 5 ppm/°C. 'Matched-pair' resistor sets with TCs matched to within 1 ppm/°C over wide temperature limits are also being produced in large quantities using Tetrinox™ resistance films.

To completely describe the advantages of each of the various types of resistors listed in this catalog, we have provided an introduction to the two basic types of Caddock resistance films used in these resistors. The accompanying index will assist you in locating the model that is right for your application.



# High Performance Power Film Resistors

**CADDOCK**
HIGH PERFORMANCE FILM RESISTORS

## Two complex-oxide resistance films provide this high performance.

### Micronox® Resistance Films

Caddock Micronox® resistance films are unsurpassed in the production of precision resistors that combine —

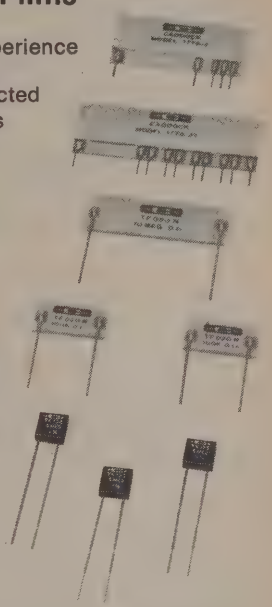
- **High Power Ratings** — to 30 watts.
- **High Voltage Ratings** — to 30,000 volts.
- **High Stability** — as close as 0.01% per 1000 hours in extended life.
- **High Operating Temperatures** — up to +275°C.
- **A Wide Range of Resistance Values In Many Sizes** — from .5 ohms to 2000 Megohms.

These performance advantages make Caddock Micronox® film resistors ideal for use in many types of electronic circuitry, including —

- **Voltage Reference Circuits**
- **High Power Density Packaging**
- **Precision Feedback Circuits**
- **Matched TC Resistor Pairs**
- **High Current Summing Circuits**

### Tetrinox™ Resistance Films

Building on 15 years of experience with our unique complete-oxide technology, Caddock has perfected the T-System™ resistance films that combine these special advantages:



- **Ultra-Low Temperature Coefficient** — standard to less than 10 PPM/°C, and specials to less than 5 PPM/°C.
- **Ultra-Precision** — with tolerances as tight as 0.05%.
- **High Resistance Range** — with values to 10 Megohms in a miniature package.
- **Ultra-Stable in Loadlife** — stability to within ±0.05% per 2000 hours.

This special combination of advantages make Caddock Tetrinox™ film resistors the optimum choice in many high stability applications —

- **Input Voltage Dividers in Precision Instrumentation**
- **Precision Voltage Reference Circuits.**
- **Decade Resistance Networks.**
- **Ultra-Low Power Precision Circuitry.**
- **Ultra-Stable Voltage Dividers.**

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

# Type MG & MH Precision High-Voltage Resistors

Type MG and MH Precision High Voltage Resistors have been proven through many years of use in critical applications in airborne computers, manned space vehicles, geophysical instruments, and medical electronics where long term reliability and stability are of utmost importance.

With values as high as 2000 Megohms in a single resistor, operation at very high voltages can now be accomplished without the need for expensive, space-consuming multiple resistor 'strings.'

Matched resistor sets are available over a wide range of ratios, and the ratio TC can be matched as close as 2 PPM/°C when required. These resistor sets are ideal for use as control voltage feedback divider networks in precision high voltage supplies.

### Special High-Voltage and High-Voltage Pulse Performance

All power ratings and maximum working voltage ratings are for continuous duty. These ratings are based on pre-stress voltage levels applied during the manufacturing process to provide for stable resistor performance even under momentary overload conditions.

These resistors can be factory-conditioned to withstand up to 60% higher maximum working voltage, provided power ratings are not exceeded. (For this higher rating specify —15, example: MG750N—15. Overload and overvoltage ratings do not apply to —15 resistors.)

Type MG and MH resistors have also found wide use in pulse and current limiting applications where high voltage levels are encountered. To meet these special conditions, Caddock has facilities for pre-stressing resistors to several times rated working voltage as a means of establishing actual operating performance.

### Non-Inductive Performance

Caddock's patented Exclusive Non-Inductive Design uses a serpentine resistive pattern that provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.

This efficient non-inductive construction is accomplished without derating of any performance advantages, and is especially valuable in pulse applications where wide bandwidths and excellent pulse fidelity must be maintained.

## SPECIFICATIONS

**Resistance Tolerance:** ±1% (tolerances to .1% on special order).

**Insulation Resistance:** 100 megohms, minimum.

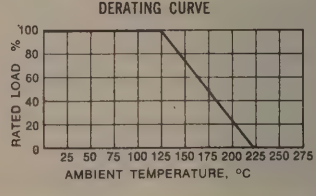
**Overvoltage:** 1.5 times working voltage for 5 seconds, R shift .8% max.

**Thermal Shock:** MIL - STD - 202, method 107, cond. C, R shift .5% max.

**Moisture Resistance:** MIL-STD-202, method 106, R shift .8% max.

**Loadlife:** 1000 hours at rated power, R shift .8% max.

**Standard Lead Material:** Gold Plated Dumet



*Non-Inductive construction available in most models. Specify with N suffix on Model No.*

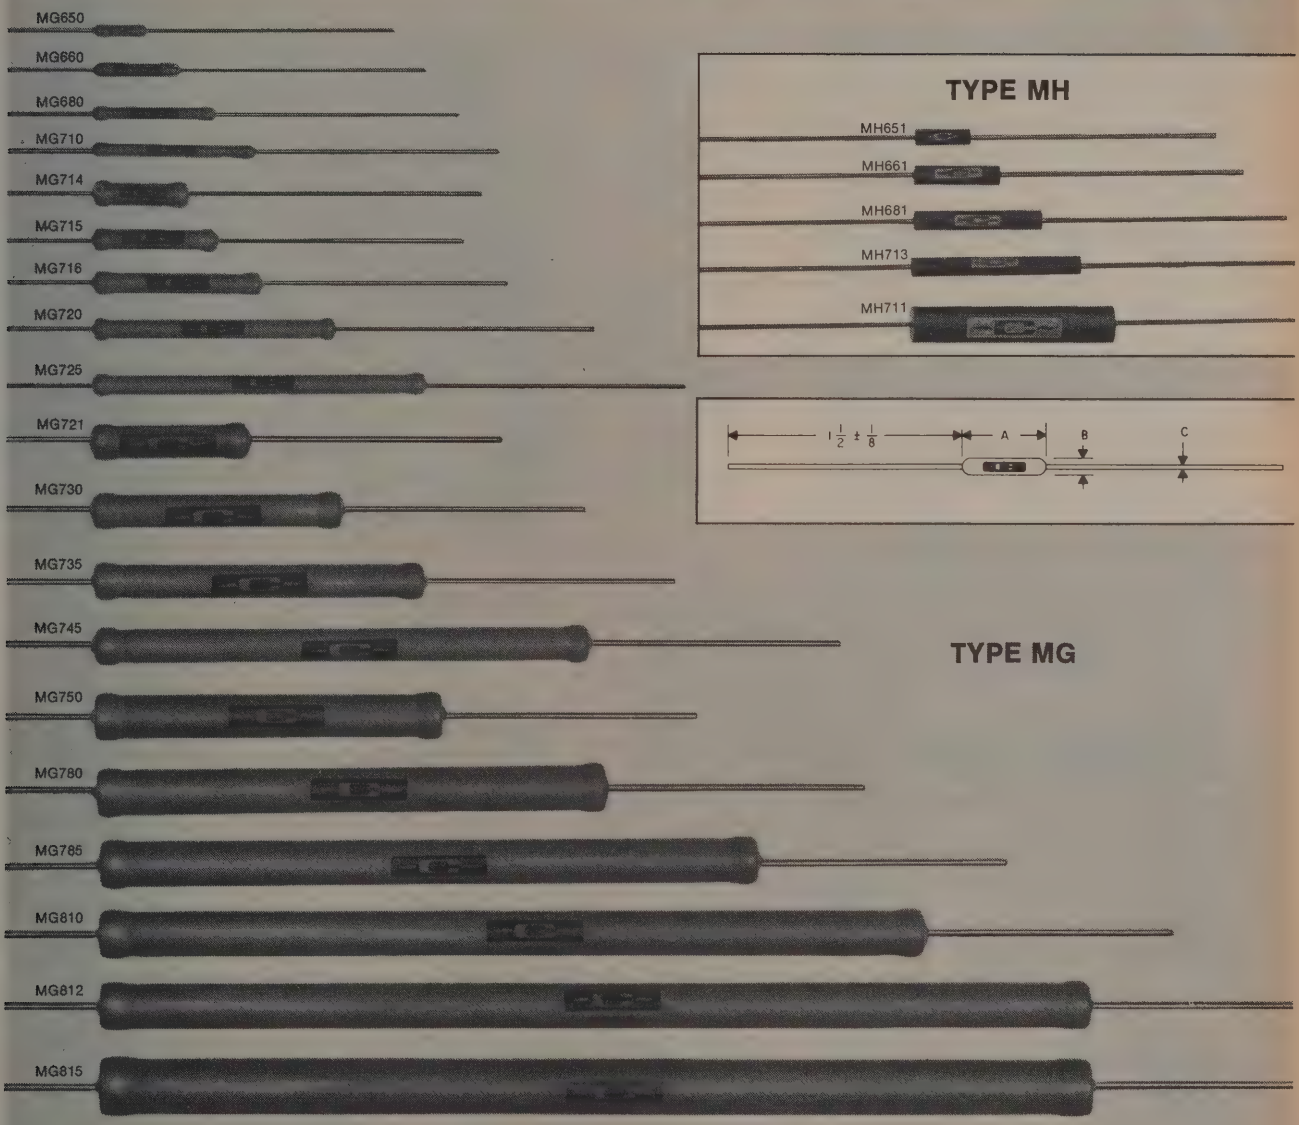
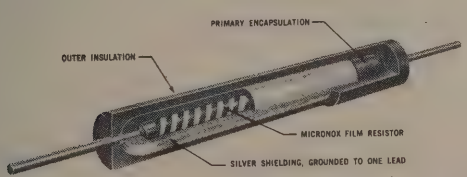
# Type MG & MH Precision High-Voltage Resistors

**CADDOCK**
HIGH PERFORMANCE FILM RESISTORS



## Exclusive Shielded Resistor

Model MH711, designed for extremely high voltage applications in very high resistance strings. This resistor remains exceptionally stable since shielding prevents film degradation from the corona developed in high voltage fields.



## Matched Resistor Sets with Tight Ratio Tolerances and TC Tracking.

Sets of Matched Type MG and MH resistors are available with ratios held as close as 0.05% over the range of ratios from 1:1 to 1:100,000 for use in voltage dividers, reference networks, feedback networks, and current summing networks.

The ratio TC of these matched resistor sets can be held as close as 2 ppm/°C over the temperature range from −15°C to +105°C.

# CADDOCK
HIGH PERFORMANCE FILM RESISTORS

# Type MR & MS Power Film Resistors

Here are the power film resistors that overcome the design limitations of wire-wound resistors! Caddock Power Film Resistors provide power ratings to 12.5 watts at 6000 volts in a single axial lead resistor. By extending both the resistance range and maximum voltage ratings, Type MS Power Film Resistors simplify circuit design and reduce equipment complexity and cost.

## All These Features in One Resistor

- Full power and voltage ratings, without derating —
  — for non-inductive performance
  — for high resistance values that extend the critical resistance value up to 10 times.
- Higher voltage ratings without the limitations of minimum wire size and spacing.
- Excellent long-term stability.
  Tests demonstrate typical stability of 0.05% per 1000 hours over extended life.

## MICRONOX® Resistance Films

Type MS performance begins with Micronox® resistance films, the basic element in every Caddock resistor. Produced exclusively by Caddock Electronics, these proven complex oxide films have been used reliably for 15 years in Caddock's precision power resistor products.

Micronox® resistance films are fired directly onto a ceramic core, in air, at 1400°F. These resistance films have demonstrated outstanding stability when exposed to a high ambient temperature, thermal shock and high power densities.

This totally new approach to precision power resistors opens new design possibilities because of the wider resistance range, precise temperature characteristics, and higher temperature and power handling capability.

## There's no derating of performance when you specify Caddock's Exclusive Non-Inductive Design.

When non-inductive performance is specified, we produce these power film resistors with a serpentine resistive pattern that provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.

The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

## Type MS Power Film Resistors are produced under carefully controlled manufacturing and test procedures.

### Manufacturing Control

Type MS Resistors are produced under strict manufacturing controls with processes which include power conditioning, overvoltage conditioning and maximum temperature conditioning.

### Quality Control

Type MS Resistors receive quality surveillance which reaches from incoming raw materials to your packaged resistors in the shipping area. And our QC system has been approved for conformance to the requirements of NASA NHB5300.4(1C) and MIL-I-45208 in many recent surveys.

### Reliability Verification

Type MS Resistors are included in the Caddock Reliability Testing Program. Conformance to specification parameters including Extended Life, Shock, Vibration and Humidity are verified on a periodic basis. Data from MS resistors can be compared by similarity to other Caddock resistor types, since Type ML, MM, MS, MP, MG, MH and MK represent an identical combination of materials — aluminum oxide substrate, Micronox® resistance film and silicone insulating coating.

# Type MS & MR Power Film Resistors

**CADDOCK**
HIGH PERFORMANCE FILM RESISTORS

Type MS High Performance Power Film Resistors have a proven performance history in industrial, computer, military and space applications. This unique line now includes higher power ratings — up to 15 watts — and resistance values to 30 Megohms.

These exceptional resistors also provide outstanding extended life stability. In annual reliability tests where 2000 hour load-life stability data has been established, Type MS Power Film Resistors have demonstrated typical stability well within 0.1% per 1000 hours and extended life stability of 0.05% per 1000 hours.

Temperature coefficients are also low, with the standard TC of 50 PPM/°C available in all models of the Type MS Power Film Resistor. They can also be supplied on special order in matched resistor sets that provide ratio tracking with varying temperature to within 2 PPM/°C.

All of the Type MS Power Film Resistors are constructed with Micronox* resistance films bonded to a high strength solid ceramic core. Nickel alloy end caps and gold plated dumet axial leads complete the assembly. Encapsulation is provided by a silicone conformal coating.

Non-inductive construction is available in most models. Specify by adding "N" suffix to Model Number.

# CADDOCK
HIGH PERFORMANCE FILM RESISTORS

# Type ML & MM Precision Film Resistors

Type ML and MM resistors have a proven performance history in industrial, computer, military and space applications. With power ratings up to 3 watts and resistance values to 15 megohms, these outstanding resistors are ideal for applications requiring tolerances as close as 0.1% and extended life stability of 0.1% per 1000 hours.

The Type MM Precision Film Resistors provide a maximum operating temperature range of +275°C and both the Type ML and the Type MM have temperature coefficients of only 50 PPM/°C over the range from −15°C to +105°C.

Construction includes Micronox* resistance films fired onto a high strength solid ceramic core. End cap construction and a molded case completes the resistor assembly and provides increased resistance to abrasion and solvents.

Caddock's Exclusive Non-Inductive Performance can also be specified for any of these resistors by adding the "N" suffix to the model number.

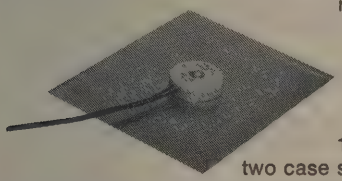
# Type MP Chassis Mounted Power Film Resistors

**CADDOCK**
HIGH PERFORMANCE FILM RESISTORS

## With Non-Inductive Performance.

Type MP Chassis Mounted Power Film Resistors are made with Micronox® resistance films fired onto a ceramic substrate which is thermally bonded to an anodized aluminum base. By mounting this assembly directly to a metal surface for improved heat transfer, these unique resistors provide increased packaging densities in many types of electronic equipment.



15 and 30 watt ratings are available in two case sizes that permit through-bolt attachment to the chassis or other heat conducting surface. The molded silicone case encapsulates the resistor assembly to meet the requirements of the most stringent environmental specifications.

The outstanding stability of the Type MP Power Film Resistors has been demonstrated in a 5½ year, 50,000 hour program of continuous load-life testing. Extended life stability during these full-power tests was better than 0.01% per 1000 hours!

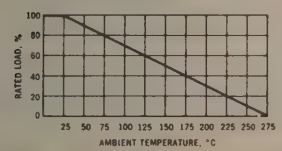
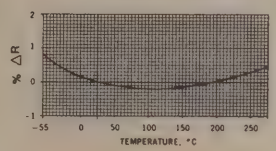
† Power rating based on chassis mounting with MP 311 and MP 312 on a 6" x 4" x 2" x .040" aluminum chassis and the MP 329 and MP 330 on a 5" x 7" x 2" x .040" aluminum chassis.

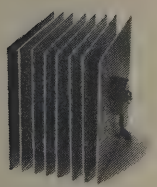
‡ TC: 50 ppm referenced to 25°C, ΔR taken at +150°C and +275°C. (Low temp. TC will be nominally −85 ppm/°C at −55°C. See typical R-T curve.)

DERATING CURVE



TYPICAL R-T CURVE

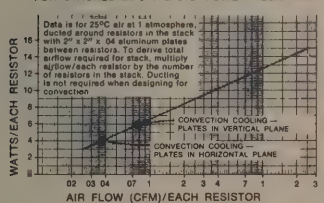




Stacked Type MP assemblies — constructed by bolting resistors between aluminum heat dissipating plates — provide a simple means of further improving packaging densities.

These charts of power ratings versus ambient temperature and chassis area show the high power levels that can be achieved with forced air cooling and with convection cooling in either vertical or horizontal orientation.

POWER RATING
FOR STACKED MP311 & 312 POWER RESISTORS



Data is for 25°C air at 1 atmosphere, ducted around resistors in the stack with 2" x 2" x .04 aluminum plates between resistors. To derive total airflow required for stack, multiply airflow/each resistor by the number of resistors in the stack. Ducting is not required when designing for convection

## SPECIFICATIONS

**Resistance Tolerance:** ±1% standard (Other tolerances on special order.)

**Insulation Resistance:** 10,000 Megohms, dry. Method — Mil-R-18546D, para. 4.6.8.

**Solderability:** Per Mil-R-18546D, para. 3.7, para. 4.6.4.

**Terminal Strength:** Per Mil-Std-202, Method 211, Cond. A (Pull Test), 5 lbs., and Cond. B (Bend Test). Max. ΔR, .2% or .2Ω, whichever is greater.

**Thermal Shock:** Per Mil-R-18546D, para. 4.6.9, max. ΔR, .5% or .2Ω, whichever is greater.

**Momentary Overload:** 2 times rated power or 1.5 times max. allowable working voltage, whichever gives the lower power, for 5 seconds. Max. ΔR, .5% or .2Ω, whichever is greater.

**Moisture Resistance:** Mil-Std-202, Method 106B, less steps 7a and 7b, max. ΔR, .5% or .2Ω, whichever is greater.

**Life:** Per Mil-R-18546D, para. 4.6.12, 1,000 hrs., Max. ΔR, 1% or .2Ω, whichever is greater.

**Shock, Medium Impact:** 50G, per Mil-Std-202, Method 205, Cond. C.

**Vibration, High Frequency:** Per Mil-Std-202, Method 204, Cond. B, Max. ΔR .2% or .2Ω, whichever is greater, through shock and vibration sequence.

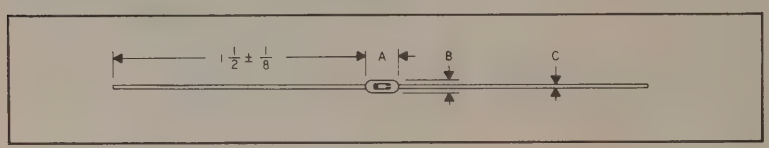
# CADDOCK
HIGH PERFORMANCE FILM RESISTORS

# Type MV
# Low-R Power Film Resistors

Type MV resistors extend the advantages of Caddock Micronox* resistance films to values as low as 0.5 ohms in a unique non-inductive design. The multiple-path resistance pattern distributes the currents evenly throughout the resistor and reduces the inductance to an absolute minimum.

The exceptional stability of Caddock Micronox* resistors — produced by firing these complex oxide films onto solid ceramic substrates — provides power ratings as high as 10 watts in a compact axial lead configuration that features excellent overload ratings.

Type MV resistors are ideal for use in high frequency circuits where close resistance tolerances and excellent long-term stability are required.



*Micronox is a registered trademark of Caddock Electronics, Inc.

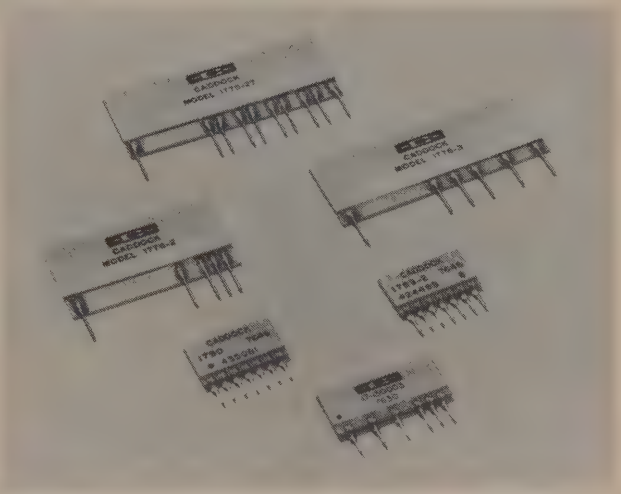
# Custom Resistive Devices

**CADDOCK**
**HIGH PERFORMANCE FILM RESISTORS**

For the ultimate in resistor network performance, Caddock produces many types of custom resistive networks with an unsurpassed combination of advantages:

- **High Resistance Ratios** — from 1-to-1 up to 1,000,000-to-1!
- **High Transient Handling Capability** — up to 100 times higher than the rated power level!
- **Extended Resistance Range** — from 1 ohm to 5000 Megohms.
- **Tight Resistance Tolerances** — to 0.05%.
- **Tight Ratio Tolerances** — to 0.025%.
- **Close Ratio Tracking** — to 5 PPM/°C from −15°C to +105°C.
- **Exceptional Resistor Stability** — as close as 0.01% per 1000 hours in extended life.

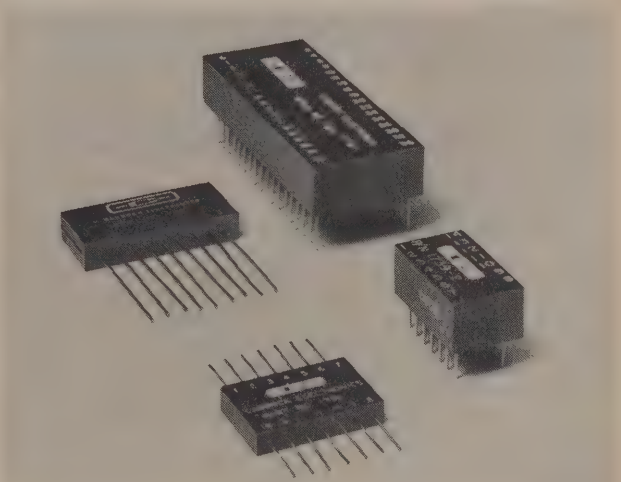
This combination of advantages in one resistor network often provides a practical — **and immediate** — means for improving the performance and specifications of electronic circuitry and equipment without any changes in the design!



## Special Multi-Lead Encapsulated Packaging for Complex Resistor Networks.

When circuit requirements make multi-resistor packaging necessary, Caddock can produce specially configured resistor networks with custom lead arrangements.

These custom resistor networks are completely encapsulated to withstand extreme environmental conditions, including shock, vibration, thermal shock and temperatures in the range from −65°C to +275°C.

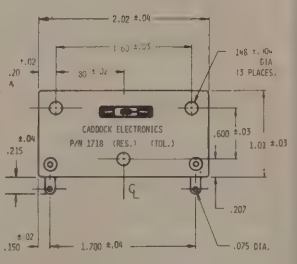


## Model 1718 Multi-Megohm Film Resistors With Exclusive Modular Stacking Design.

This Multi-Megohms Resistor is designed to provide a low profile non-inductive high resistance value with precise resistance-temperature characteristics. These are especially useful in high resistance voltage dividers where fast response is important.

## SPECIFICATIONS

**Resistance Range:** 1 meg-333 meg
**Power Rating:** 3 Watts @ 25°C
**Max. Working Voltage:** 12000 Volts
**Resistance Tolerance:** ±1% (Tolerances 0.2% on special order)
**Terminal Material:** Gold Plated Copper
**Encapsulation:** Conformal Coating
**Insulation Resistance:** 100,000 Megs, Min. when mounted
**Temperature Coefficient:** ±80 PPM/°C Referenced to 25°C, △R taken at −15°C and +105°C
**Thermal Shock:** Mil-Std 202, Method 107 R shift .5% Max.
**Loadlife:** 1000 hours at rated power R shift 8% Max.
**Mounting:** Three 6-32 Nylon Screws with Standoff Spacers, .050 Thick, Supplied with unit
**Operating Temperature:** −55°C to +125°C



Substrate .054± .01 Thick.

.09± .01 Thick Including Lug.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

# Type MK Low Cost Precision Film Resistors

## With Resistance Range Extended to 100 Megohms.

Here are the low cost precision resistors that provide high density packaging in large volume printed circuit applications. Available in two miniature rectangular package configurations with standard lead spacings, Type MK Precision Film Resistors now cover the entire resistance range from 10 ohms to 100 Megohms.

Constructed with Caddock Micronox® resistance films fired onto a solid ceramic substrate, Type MK Precision Film Resistors combine all of these outstanding advantages:

- ±1% resistance tolerance is standard and tolerances to ±0.1% are available on special order.
- Operating temperatures are from −55°C to +175°C.
- Full power rating at +125°C.
- Temperature Coefficient is only 50 PPM/°C up to 10 Megohms and 80 PPM/°C up to 100 Megohms, referenced to 25°C with the ΔR taken at −15°C and +105°C.
- Extended life stability is typically better than 0.1% per 1000 hours.
- Caddock's non-inductive performance provides greater pulse fidelity and wider bandwidths in high frequency circuits.

This combination of performance advantages in a small, standardized case can simplify many engineering and production problems:

**One size of Type MK resistors can replace many sizes of radial lead resistors.**

This table of "RN" style axial lead resistors shows the many sizes and power ratings that can be replaced with either of the two models of Type MK Precision Film Resistors within the maximum allowable voltage ratings.

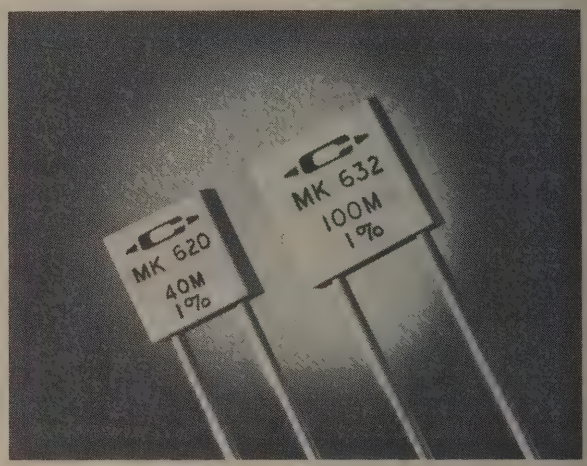
**Comparison of Type MK and "RN" Ratings and Dimensions**

| Resistor Type | Power Rating | Maximum Resistance | Mounting Hole Spacing | |
|---|---|---|---|---|
| MK 120 or MK 620 | .50 WT. | 40 Megohms | .150 | Even the smallest Type MK resistor can replace all of these RN type resistors. |
| MK 132 or MK 632 | .75 WT. | 100 Megohms | .200 | |
| RN50 | .05 WT | 1 Megohm | .400 | RN 50 |
| RN 55 | .10 WT | 5 Megohms | .500 | RN 55 |
| RN60 | .125 WT | 10 Megohms | .625 | RN 60 |
| RN65 | .25 WT | 20 Megohms | .875 | RN 65 |
| RN70 | .50 WT | 40 Megohms | 1.000 | RN 70 |

All outline drawings full size — dimensions in inches.

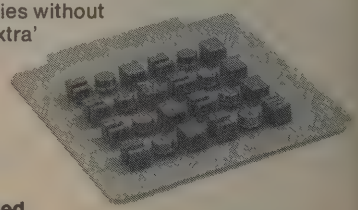
The largest Type MK — rated at .75 watt — requires less board space than even the 1/20th watt RN 50.

The smallest Type MK — rated at .5 watt — provides power dissipation **equal** to the RN 70 resistor. The RN 70 resistor requires a mounting hole spacing of 1" and a side-to-side spacing of .250 inches, resulting in a total mounting area of .25 square inches — **10 times the area required for a .75 watt Type MK resistor!**



**One standard resistor configuration can simplify board layouts.**

With the exceptionally wide range of resistances that are available in each model of Type MK Precision Film Resistors, circuits can now be designed for maximum packaging densities without the need for leaving 'extra' space where resistor value changes can require larger resistors or non-uniform lead spacings.



**Standardization of resistor size can speed assembly procedures and reduce procurement costs.**

The standardization of resistor size can pay additional dividends by simplifying assembly procedures. The radial leads do not require additional bending prior to insertion, and the standard lead spacing can reduce the time required for assembly.

The combination of higher power rating and smaller size can also lower procurement costs. By reducing the wide variety of sizes and types of axial lead resistors to a single, 'standardized' resistor type, unit prices can be lowered and inventory problems simplified.

### Low Quantity Prices — Fast Delivery

Quantity prices for Type MK Precision Film Resistors are low, with many values priced under 30 cents each in medium-to-large production orders.

Type MK Precision Film Resistors can be delivered in large quantities with normal delivery schedules of 4 to 6 weeks ARO, and prototype quantities can usually be delivered from stock.

A pricing schedule for all values and models of Type MK Precision Film Resistors is available upon request. For specific price and delivery information call or write to the main offices of Caddock Electronics in Riverside, California.

**CADDOCK**
HIGH PERFORMANCE FILM RESISTORS

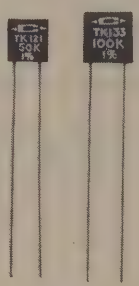
# Type TK Temp-Stable Precision Film Resistors

## With Temperature Coefficients of Less Than 10 PPM/°C.

Caddock introduces a new design element for precision electronic circuitry — an advanced technology breakthrough that solves many critical circuit stability problems — the **Type TK Temp-Stable Precision Film Resistors with the Tetrinox™ resistance system.**

Type TK Temp-Stable Precision Film Resistors provide a combination of performance advantages never before available in a resistive component:

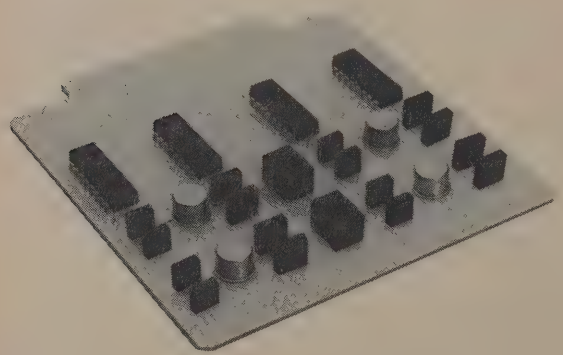
- **Temperature Stability** — better than 10 PPM/°C over the entire temperature range from −55°C to +125°C!
- **Long-Term Absolute Stability** — better than ±0.05% per 2000 hours of operation.
- **Extended Resistance Range** — from 1000 ohms to 10 Megohms.
- **Precision Tolerances** — ±1% is standard, and tolerances as close as ±0.05% are available.
- **Wide Operating Temperature Range**—from −55°C to +175°C.
- **Small Size** — with two miniature rectangular cases for maximum packaging density and minimum mounting area.
- **High Power Density** — with power ratings of .2 watt and .3 watt in molded cases, the largest of which is a standard CK 06 package.

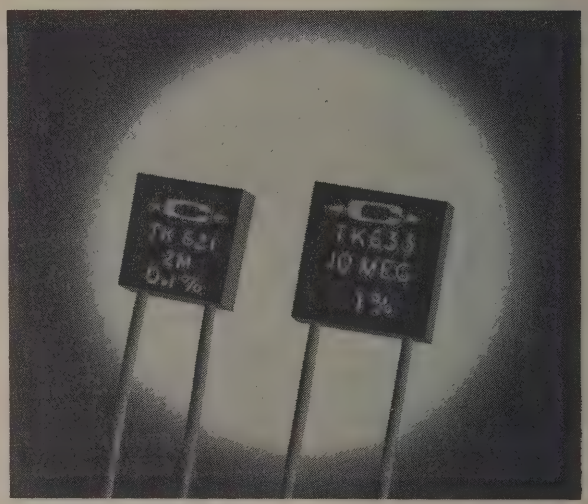


(Photos show resistors full size)

- **Highest Performance-to-Cost Ratio** — with many values priced below $1.50 each in 100 lot quantities.

Building on 15 years of experience with our unique complex-oxide technology, Caddock has perfected the Tetrinox™ resistance system — the first high resistance system to provide a TC that is well within 10 PPM/°C and that is also essentially linear over the entire temperature range from −55°C to +125°C.





The exceptional performance of Type TK resistors can achieve improvements in many circuit applications:

**Low TC "Matched-Pair" Voltage Dividers Can be Assembled Without Pre-Selection of Resistors.**

An important application for Type TK resistors is in "matched-pair" voltage dividers where the low 10 PPM/°C temperature coefficient provides ratio tracking of less than 20 PPM/°C without resistor pre-selection or special testing.

With factory selection, Type TK resistor pairs can be matched to within 1 PPM/°C.

**Extended Resistance Range Reduces Power Requirements**

Because the Type TK resistors provide resistance values as high as 10 Megohms — values that are up to 100 times higher than other types of ultra-low TC resistors — engineers can now design precision circuits with lower current drain and lower power requirements.

**High Density Packaging**

The radial lead mounting and small rectangular case of Type TK resistors permits high packaging densities in low profile electronic circuitry. And because both models of Type TK resistors are available in an exceptionally wide range of resistances, lead spacing and mounting space can be standardized.

For additional information on the Type TK resistors for your high stability circuits, contact the engineering staff of Caddock Electronics in Riverside, California. They can assist you in determining the exact temperature coefficient and tolerances your application requires, and will provide both evaluation and production quantities of these new resistors on fast-delivery schedules.

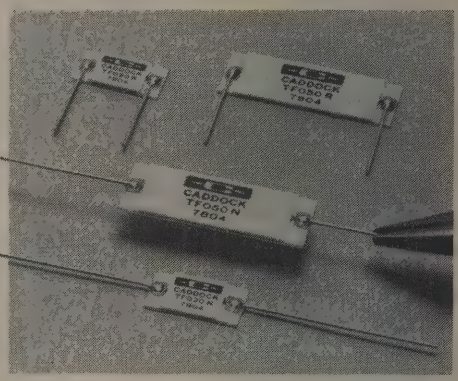
# CADDOCK
HIGH PERFORMANCE FILM RESISTORS

# Type TF Low TC Ultra-Precision Film Resistors

## A cost-effective replacement for precision wire-wound resistors.

- **Ultra-Precision** — Resistance tolerance of ±0.1% is standard. Tolerances to ±0.01% are available.
- **Resistance Values** — 1 kohm to 10 Megohms.
- **Low Temperature Coefficient** — Less than 15 ppm/°C.
- **Non-Inductive Performance** — For greater pulse fidelity and wider bandwidths.



Type TF precision resistors employ the new Caddock Tetrinox™ resistance films — the resistance system that sets a new standard for high value, ultra-stable precision resistors.

A whole new approach to quantity production of ultra-precision resistors is the result of combining our unique complex-oxide technology with an advanced high thru-put laser manufacturing capability.

The result: You receive resistors with the highest performance — in quantity — at the lowest cost!

## Standard Type TF Resistors

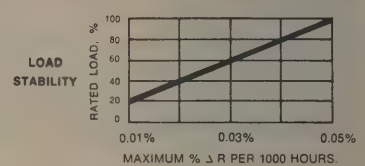
| Model Number | | Wattage @ +70°C. | Maximum Continuous Oper. Voltage | TC ppm/°C | Resistance | | Dimensions | | Leadwire |
|---|---|---|---|---|---|---|---|---|---|
| Axial Leads | Radial Leads | | | | Min. | Max. | A | B | |
| TF 020 N | TF 020 R | .33 | 300 | 15 | 1 K | 2 Meg | .75 ±.020 | .375 ±.020 | Tinned Copper |
| TF 050 N | TF 050 R | .75 | 1400 | 15 | 10 K | 10 Meg | 1.5 ±.020 | .50 ±.020 | Tinned Copper |

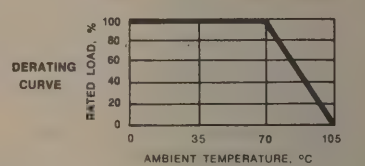
**Absolute Temperature Coefficient:** ±15 PPM/°C from −55°C to +105°C., referenced to +25°C.

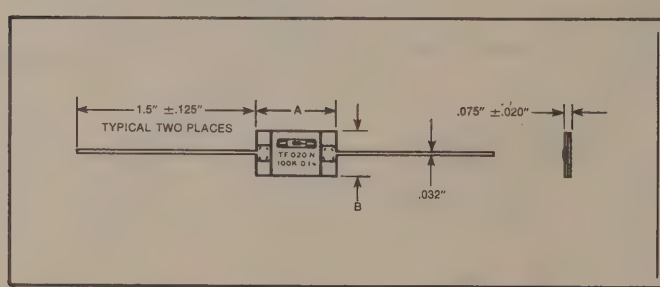
**Resistance Tolerance:** ±0.1% standard. Tolerances to ±0.01% on special order.

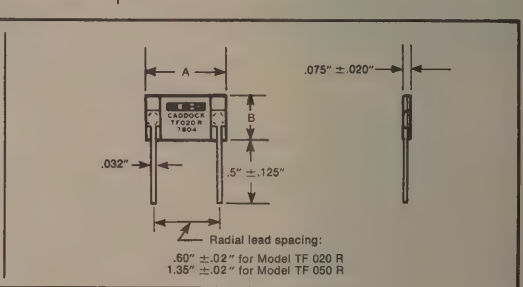
**Storage Temperature:** −55°C to +105°C.

**Shelf Life:** Typically 0.005% per year.





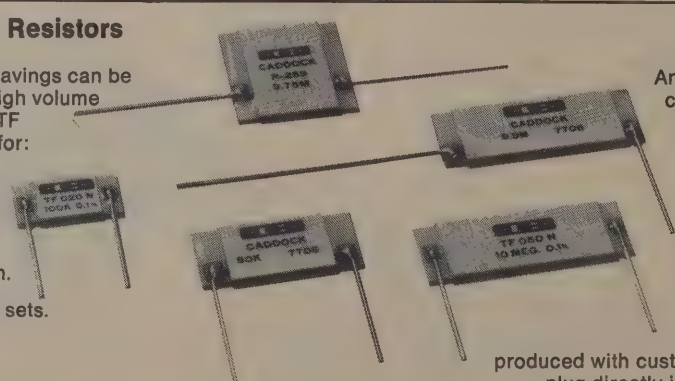




## Custom Type TF Resistors

Additional cost savings can be realized when your high volume ultra-precision Type TF resistor is optimized for:

- Voltage rating.
- Power rating.
- Mechanical configuration.
- Ratio matched sets.



And for special requirements, custom Type TF resistors are available with:

- Resistance values to 25 Megohms.
- TCs of 5 ppm/°C, 10 ppm/°C 15 ppm/°C or 25 ppm/°C.
- Shelf stability of 0.0025% per year.

Type TF resistors can also be produced with custom-spaced radial leads that will plug directly into your existing circuit layouts.

# Type 1776 Precision Decade Resistor Voltage Dividers

**CADDOCK**
HIGH PERFORMANCE FILM RESISTORS

## Input Voltage Dividers for Digital Multimeters and Range-Switching Instruments.

This new edge mount precision decade resistor voltage divider takes less board space and offers more performance than selected discrete resistor sets and thin film networks:

- **Voltage Division Ratios of 10:1, 100:1, 1000:1 and 10,000:1.**
- **Voltage Ratings of 1,200 volts continuous and 2,000 volts overvoltage.**
- **Utilizes Tetrinox™ Temp-Stable Resistance Film.**

*Resistors Isolated

① **Ratio Tolerance:** Maximum ratio difference between any two resistors in the network.

② **Ratio Temperature Coefficient:** Ratio track between any two resistors in the network from 0°C to +70°C.

③ **Voltage Coefficient of Ratio (ppm/volt):** $R_1$ in series with any combination of $R_2$, $R_3$, $R_4$ and $R_5$, 100 volts to 1200 volts.

④ **Load Life:** Ratio stability of resistance under full load. 1200 volts DC applied to all resistors in series for 2000 hours at +70°C.

⑤ **Shelf Stability of Ratio:** Six months at shelf conditions.

⑥ **Overvoltage:** 2000 VDC or Peak AC. $R_1$ and any combination of $R_2$, $R_3$, $R_4$ and $R_5$ in series with $R_1$ for 10 seconds.

**Voltage Rating:** 1200 volts DC or 1000 volts rms AC applied to all resistors in series.

**Storage Temperature:** −55°C to +105°C.

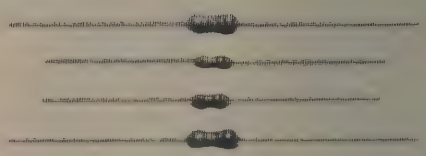
RESISTORS

# CMR SERIES
## METAL FILM FIXED RESISTORS

## INTRODUCTION

CAPAR's CMR Series Metal Film Resistors are the result of years of research and the utilization of the highest technology available in today's electronic industry. Manufactured to meet or exceed MIL specifications, these resistors are of the highest quality and economical pricing in the resistor market today. Comprised of a specific Nickel-Chrome Alloy deposited by a high vacuum evaporation technique, the resistors feature a controlled temperature coefficient and a low current noise. The resistors are also protected by a multi-layered, heat resistant epoxy resin coating to insure high stability against surrounding conditions.



## PERFORMANCE CHARACTERISTICS & FEATURES

1. MIL Style:
   (a) MIL-R-22684, RL07, RL20.
   (b) MIL-R-10509F, RN55, RN60.
2. Resistance Tolerance: ±2% (G), ±1% (F) available on special order ±0.5% (D), ±0.25% (C), ±0.1% (B).
3. Temperature Coefficient: ±200 ppm/°C (W), ±100 ppm/°C (X) available on special order ±50 ppm/°C (Y), ±25 ppm/°C (Z).
4. Conformal Multi-Coating.
5. Standard EIA Color Coding.

RESISTORS

# CCF SERIES
## CARBON FILM FIXED RESISTORS

## INTRODUCTION

The CCF Series are low cost, high performance and highly reliable carbon film resistors.

They have been designed for miniature circuits that require resistors with greater stability and reliability than carbon composition types.

These resistors feature welded cap and lead construction, color coding resistant to all major cleaning solvents, uniform body sizing and special solder coated leads for easy soldering. The resistors exceed performance characteristics of MIL-R-11f.

The resistors are available card packed (50 to a sleeve, 1,000 to a box), taped and reeled, and cut and formed to customer specifications. New expanded resistance range 1 ohm through 10 megohm.

CORNING

# CARBORUNDUM NON-INDUCTIVE POWER RESISTORS

**Choose Type SP** for great A-C power handling capability, whether it be at power frequency or many megahertz.

**Choose Type A** when high resistance is required in a high power non-inductive resistor.

**Choose Type AS** for its ability to absorb huge amounts of energy and for its non-inductive property at high voltage.

| CHARACTERISTICS | Type SP | Type AS | Type A |
|---|---|---|---|
| Maximum Operating Temperature: °C | 350 | 230<br>150* | 230 |
| Temperature Coefficient: Percent per degree C, −55°C to maximum rated temperature | 0.075 | 0.075 | 0.10 |
| Voltage Coefficient: Maximum percent per kilovolt per inch active length (overall length less termination) | 1.0 | 1.0 | — |
| Short Time Overload: Maximum percent change after 5 cycles 10 times rated power, 5 seconds on, 90 seconds off | 2.0 | 2.0 | — |
| Moisture Resistance: Maximum percent change when tested per MIL-STD-202 method 103 | 2.5 | 2.5 | 2.5 |

*with mylar insulation

## STANDARD SIZES

(Special sizes are also available: consult factory.)

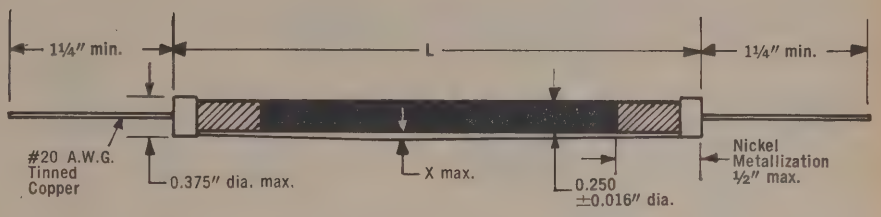
CARBORUNDUM

# CARBORUNDUM NON-INDUCTIVE POWER RESISTORS FOR SPECIAL PROBLEM SOLUTIONS

## TYPE AS "PENCIL-SHAPED" STYLE

The high-energy absorbing characteristic of the Carborundum type AS material is available in these pencil-shaped resistors to offer the unique non-inductive high-voltage properties in a compact easily wired configuration.



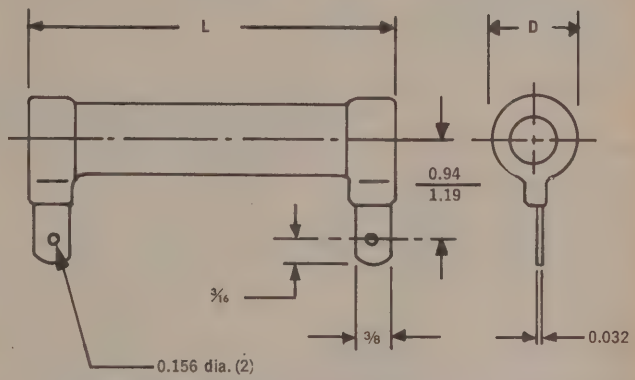
| Type No. | L +0.25 −0 | X | Resistance Available (ohms) Premium to | Standard to | Premium to | | Average Power @ 40°C (watts) | Peak Energy (joules) | Peak Voltage (volts) |
|---|---|---|---|---|---|---|---|---|---|
| 104 AS | 4 | 0.08 | 55 | 420 | 9,000 | 13,500 | 9 | 1,200 | 9,000 |
| 106 AS | 6 | 0.12 | 90 | 700 | 15,000 | 22,000 | 13 | 1,900 | 15,000 |
| 109 AS | 9 | 0.16 | 150 | 1,150 | 25,000 | 36,000 | 20 | 3,000 | 25,000 |

## TYPE AS EPOXY COATED STYLE

Carborundum Type AS High-Energy Ceramic Resistors are available with an epoxy coating which protects the resistors body from contaminants. It is especially useful where the resistor is employed in an application where it is not protected from a dirty ambient atmosphere or where it is immersed in a cooling or dielectric fluid.

In air the coated resistor can safely dissipate 75% of the power dissipated by an uncoated part.

The overall length, L, of the coated resistor is approximately 0.25" longer than the uncoated part; the diameter, D, is approximately 0.30" greater.



## TYPE AS DISC AND WASHER STYLES

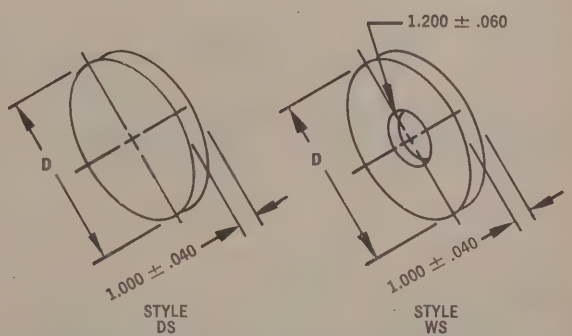
Carborundum Type AS Disc and Washer Ceramic Resistors are a bulk-type low resistance element, and therefore have the ability to absorb instantaneously great surges of energy with virtually zero inductance.

Maximum Peak Voltage: 5000 volts.

Maximum Temperature: 230°C.

Power Rating: In free air, parts will safely dissipate 2.5 watts per square inch of surface area at 40°C.

Temperature Coefficient of Resistance: −0.1%/°C to 0.0%/°C.



| Style | | Diameter "D" (inches) | Peak Energy (joules) | Available Resistances Minimum | Maximum |
|---|---|---|---|---|---|
| 911DS | Solid Disc | 1.60 ± 0.06 | 9,000 | 1.6 | 800 |
| 912DS | Solid Disc | 2.37 ± 0.06 | 21,000 | 0.7 | 90 |
| 913DS | Solid Disc | 3.00 ± 0.08 | 33,000 | 0.5 | 56 |
| 914DS | Solid Disc | 3.75 ± 0.08 | 52,500 | 0.3 | 36 |
| 913WS | Washer | 3.00 ± 0.08 | 27,600 | 0.5 | 78 |
| 914WS | Washer | 3.75 ± 0.08 | 47,000 | 0.3 | 40 |
| 915WS | Washer | 4.37 ± 0.08 | 65,500 | 0.2 | 28 |
| 916WS | Washer | 4.75 ± 0.08 | 79,500 | 0.2 | 24 |

The Carborundum Company, Graphite Products Division, Post Office Box 339, Niagara Falls, N.Y. 14302 Tel: (716) 278-2521 Telex: 91-555 (CARBO GLO NGF)

CARBORUNDUM

# CARBORUNDUM NON-INDUCTIVE POWER RESISTORS FOR SPECIAL PROBLEM SOLUTIONS

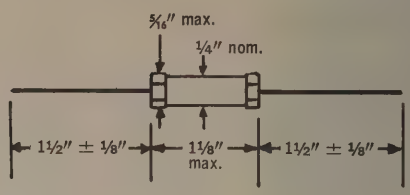
## TYPE 234SP RESISTORS

Carborundum's Type 234SP Resistor is offered in a small size, ¼ inch diameter by 1 inch long, capable of dissipating a full 10 watts of power at 40°C. It also offers these advantages:

### SPECIFICATIONS

Resistance: 1-330 ohms ±5% ±10% ±20%
Maximum Peak Voltage: 500 volts
Maximum Power at 40°C: 10.0 watts
Derate Linearly to 0 watts at 350°C
Maximum Operating Temperature: 350°C
Maximum Peak Energy: 30 joules

- **Non-Inductive**
  The Type 234SP is a bulk resistor. There are no spirals, no windings.
- **Surge Capability**
  The bulk of the body can absorb a surge of several seconds duration far better than a wire or film.
- **High Power Capability**
  The Type 234SP Resistor can glow dull red for short periods and return to near original resistance.



### CHARACTERISTICS

Short Time Overload (Max. change in resistance after 10 cycles at 1000% rated power, 5 seconds on, 90 seconds off: 10%

Life (Maximum change in resistance after 1000 hours at rated power): 5%

Note: The above characteristics are for parts 100 ohms and less. Power for tests is alternating current. If DC power is applied to resistor, changes in resistances may be substantially greater.

Temperature Coefficient of Resistance 0°C to 350°C (Maximum change*): ±.075%/°C

*Generally highest resistances have a negative TCR and lower resistances have a positive TCR.

# CARBORUNDUM® VARISTORS

Standard varistors described below have a 10% tolerance on voltage. Also available: leadless discs and rods, voltages specified at intermediate values or at other currents, and voltage tolerances of ±15% and ±20%. Available at extra cost: voltage tolerances of ±5% and ±7%, color coding, and special coatings.

Standard rod varistors have a blue epoxy coating. Available at extra cost: formed leads for printed circuit board insertion.

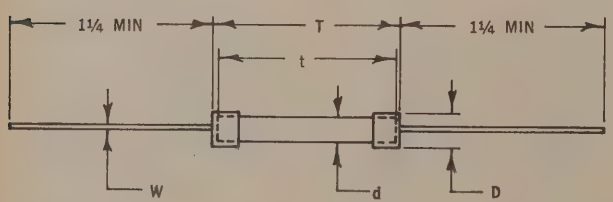


Figure 1

Standard disc varistors have a black flame-retardant PVC coating. Also available: Glyptal coating and kinked leads for printed circuit board insertion.

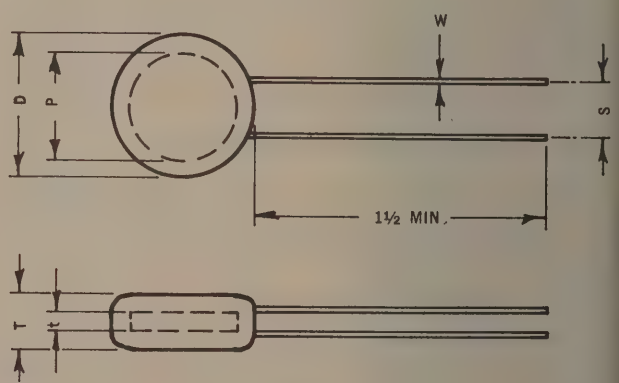

Figure 2

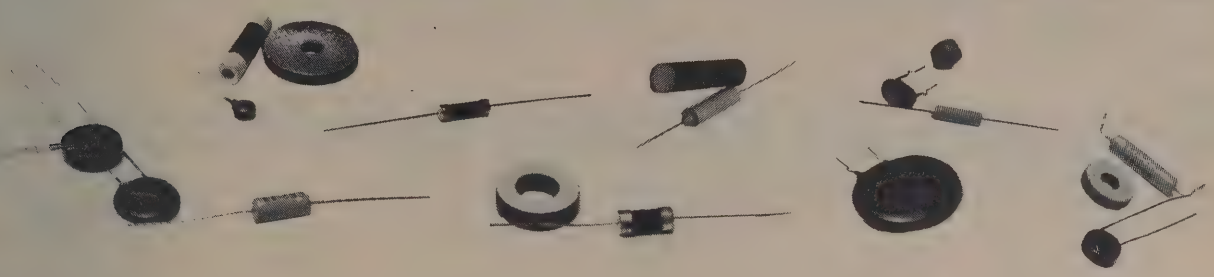
CARBORUNDUM

# CARBORUNDUM® VARISTORS



Carborundum silicon carbide varistors are voltage-dependent resistors which are offered in a wide variety of configurations, including discs, rods, and washers. In addition to the sizes shown on these pages, rods are available up to 18 inches in length, washers are available up to 3½ inches in diameter. Typical uses include limitation of peak discharges, spike suppression, stabilization of voltages, and generation of nonlinear functions.

Varistors are specified by the voltage measured across them, suitably toleranced, at some constant current. The slope of the voltage-current characteristic is most often given by the maximum voltage ratio for two specified currents.

In general the characteristic for a varistor may be approximated by the equation:

$$i = Ke^n$$

where i and e are instantaneous current and voltage respectively, K is a proportionality constant, and n is an exponent applicable in the range in which the varistor is used: most often it is between 3 and 5.

The silicon carbide varistor is a "forgiving" component. When hit by a voltage surge, the energy is absorbed throughout its body, not at a junction. A voltage surge beyond the design level causes substantial increase in current and energy absorption, but not a catastrophic failure.

## SMALL DISC VARISTORS

| Carborundum Part Number | Volts ±10% @ 1.0 ma. | Volts @ 1.0 ma. ÷ Volts @ 0.1 ma. (maximum) |

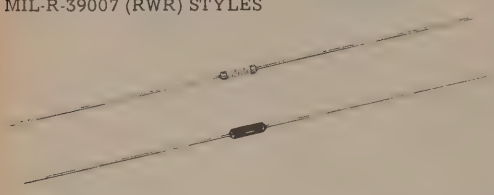
CARBORUNDUM

# Shallcross Resistor Specifications

## POWER (ER) RESISTORS
## MIL-R-39007 (RWR) STYLES



FEATURES:

Established reliability — documented failure rate — 100% screening.

Miniature size vs high power.

All MIL-R-39007 styles available.

Exceptional stability — controlled minimal stress windings using premium grade selected wires. Additional stabilization is afforded by an extensive accelerated aging program.

High thermal conductivity, centerless ground cores for maximum heat distribution and dissipation.

Resistance element is coated with a high temperature silicone material.

All welded construction.

Weldable and solderable leads.

Non-inductive windings available.

## POWER RESISTORS
## MIL-R-26 (RW) STYLES &
## COMMERCIAL INDUSTRIAL
## (LA) STYLES

FEATURES:

Miniature size vs high power levels.

22 styles to choose from — ranging from .4 watts to 18 watts.

MIL-R-26 styles available.

High thermal conductivity utilizing Beryllia, Alumina or Steatite cores.

All welded construction.

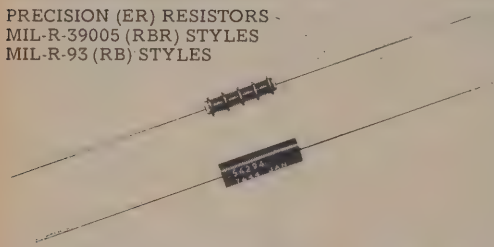
Resistance wires are "sandwich-welded" to the end caps.

Weldable and solderable leads.

Non inductive windings available.

Resistance element is coated with a high temperature silicone material.

## PRECISION (ER) RESISTORS
## MIL-R-39005 (RBR) STYLES
## MIL-R-93 (RB) STYLES



FEATURES:

Off-the-Lead welded terminations on all styles larger than .100" diameter.

Unique cap and lead construction isolates termination from external stresses.

Double splined knurl leads are welded to the cap and firmly anchored inside the bobbin with a special high temperature adhesive.

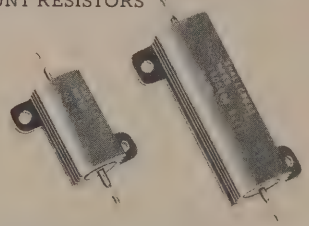
Epoxy sealed dry air chamber completely isolates windings from external stresses.

Thick layer of encapsulant supplies additional environmental and mechanical protection.

Resilient inner coating permeates and coats the windings for increased moisture, vibration, and shock protection without stress introduction.

Controlled minimal stress windings using premium grade selected wire.

## CHASSIS MOUNT RESISTORS



FEATURES

Four popular sizes — 5 watts to 50 watts.

High heat conductivity aluminum housing.

Screw mounts on chassis for heat sink effect.

Top surface marking for ease of identification after mounting.

Completely environmentally protected.

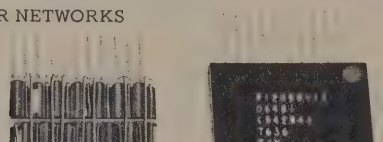
All welded terminations.

High temperature molded construction.

Copperweld terminals hot tin dipped for improved solderability.

Wound with premium grade resistance wire for maximum stability at conventional power ratings.

## RESISTOR NETWORKS



Network quality is determined by the qualities of its individual resistors plus packaging and mounting techniques. Shallcross offers a unique background of experience, reliability, data, manufacturing and testing skills for wirewound resistor networks. For a sample of this ability, submit your next network requirement for evaluation by Shallcross engineers.

PARAMETERS:

Resistance ratios to .001%

Resistor tolerances to ± .005% (at ambient)

Ratio tolerances as close as .01% (over a range of temperatures).

Stability to ±.001% per year.

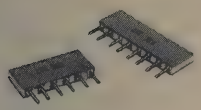
**WORLD LEADER IN CERMET RESISTOR TECHNOLOGY**

# SINGLE-IN-LINE CERMET RESISTOR NETWORKS

## 750 SERIES SINGLE-IN-LINE CERMET RESISTOR NETWORKS



- 6, 8 and 10-pin modules on .100" lead centers
- Resistance: 33Ω - 510 KΩ* ±2% (for 750-85 Series, see table below schematic)
- Power ratings @ 70°C per module: 6 pin .9 watt; 8 pin 1.1 watt; 10 pin 1.5 watt
- Standard TC: ±250 ppm°C
- TC Tracking: 50 ppm°C

**FEATURES:**

- Low profile construction
- High reliability
- Alumina substrate
- Low cost automatic insertion and handling

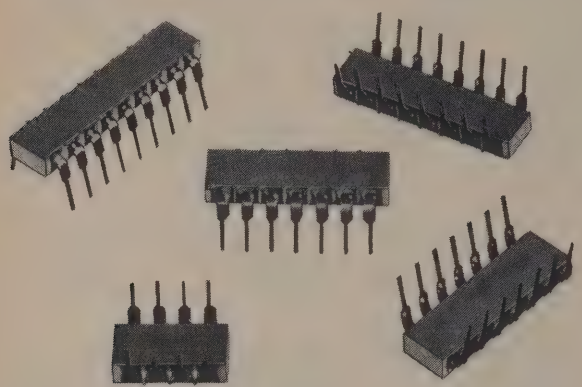
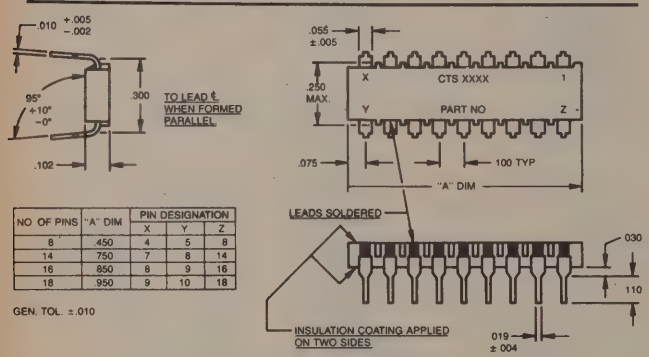
**WORLD LEADER IN CERMET RESISTOR TECHNOLOGY**

# DUAL-IN-LINE CERMET RESISTOR NETWORKS

***CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices*)***

CTS Series 760 Dual-In-Line cermet resistor networks are available in 8, 14, 16, and 18 lead styles. CTS now offers you a choice of four popular space-saver packages. All are designed to simplify automatic insertion along with IC's and other DIP products for reduced costs. Easy to hand mount, too. Available without cover coat, so you can trim for circuit balance in your own plant. Choose from standard circuits available off-the-shelf for immediate delivery or custom designed to your specifications.





| NO. OF PINS | "A" DIM | PIN DESIGNATION X | Y | Z |
|---|---|---|---|---|
| 8 | .450 | 4 | 5 | 8 |
| 14 | .750 | 7 | 8 | 14 |
| 16 | .850 | 8 | 9 | 16 |
| 18 | .950 | 9 | 10 | 18 |

GEN. TOL. ±.010

## Environmental Performance Characteristics

| Test | Allowable Resistance Change CTS Max△ R | CTS Avg. △ R |
|---|---|---|
| Load Life: 1,000 hrs., 0.1 watt per resistor at 70°C | ±0.50% | ±0.20% |

***FEATURES:***

- Low height profile
- .100" lead spacing
- High overload capabilities
- 8, 14, 16 & 18 pin constructions
- Compatible with automatic insertion equipment
- 2 watt power capabilities
- Reduced insertion time
- Available with capacitors and/or active devices*

***ELECTRICAL AND MECHANICAL SPECIFICATIONS:***

**Description:** 8, 14, 16, and 18 pin dual-in-line modules on .100" lead centers.

**Standard Resistance Range:** 22Ω through 1 MegΩ.

**Special Resistance Range:** Below 22Ω and above 1 MegΩ.

**Resistance Matching (2 like resistors):**
50Ω to 30KΩ — 0.5%
30KΩ to 250KΩ — 1%
250KΩ to 3 MegΩ — 2.5%

**Ratio Matching:**
50Ω to 30KΩ — ±1%
30KΩ to 250KΩ — ±2%
250KΩ to 3 MegΩ — ±5%

**Wattage Rating @ 70°C per module:** 8 pin - .75 watt; 14 pin - 1.5 watts; 16 pin - 1.75 watts; 18 pin - 2.0 watts.

**Standard Temperature Coefficient:** ±300 ppm/°C.

**Special Temperature Coefficient:** to ±100 ppm/°C.

**Temperature Coefficient Tracking:** Available to 50 ppm/°C.

**Standard Resistance Tolerance:** ±5%.

**Special Resistance Tolerance:** ±1% or ½Ω (whichever is greater).

**Substrate Material:** Alumina.

**Resistor Material:** Cermet - thick film.

**Insulation Coating:** Organic - epoxy phenolic.

**Lead Material:** Solder coated copper.

**Solder:** 60/40 Tin/Lead.

**Lead Strength:** 5# pull.

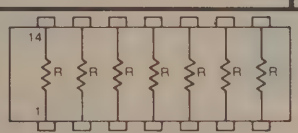
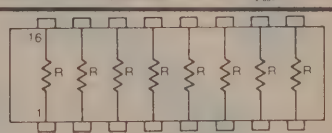
*NOTE: Additional resistance values are constantly being added. Please contact your local CTS Industrial Distributor to check availability of values not shown above.

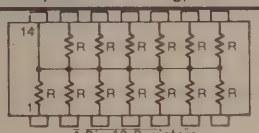


14 Pin-7 Resistors
Part Number 760-3-R-+value



16 Pin-8 Resistors
Part Number 761-3-R-+value

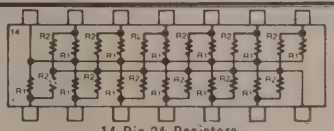
APPLICATIONS: "Wired OR" pull-up; Power driver pull-up; Power gate pull-up; Line termination; Long-line impedance balancing; LED current limiting; ECL output pull-down resistors; TTL input pull-down.



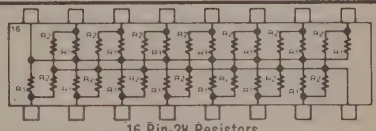
14 Pin-13 Resistors
Part Number 760-1-R-+value

16 Pin-15 Resistors
Part Number 761-1-R-+value

APPLICATIONS: MOS/ROM pull-up/pull-down; Open collector pull-up; "Wired OR" pull-up; Power driver pull-up; High speed parallel pull-up; TTL unused gate pull-up; TTL input pull-down; Digital pulse squaring.



14 Pin-24 Resistors
Part Number 760-5-R-+values



16 Pin-28 Resistors
Part Number 761-5-R-+values

| Resistance Values R1/R2 | Part Numbers | |
|---|---|---|
| 220Ω/270Ω | 760-5-R220/270 | 761-5-R220/270 |
| 220Ω/330Ω | 760-5-R220/330 | 761-5-R220/330 |
| 1.5K/3.3K | 760-5-R1.5/3.3K | 761-5-R1.5K/3.3K |

Other combinations available upon request

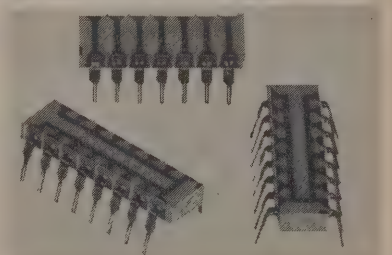
**Pulse Squaring TTL Terminators**

CTS 760-5 networks consist of two resistor pairs of the above value combinations. The resistors are connected together in series with a common line for power and a common line for ground. The junction of each pair is brought out to a separate terminal.

## *CONDUCTOR MODULES*

**Eliminate time consuming installation of jumper wires.**

**Density of Jumpers:**
Depending on number of pins, screened on both sides of substrate. Built to customer specifications and requirements.



ORDERING INFORMATION: Place orders using following address: CTS OF BERNE, INC., 406 Parr Rd., Berne, Ind. 46711 • (219) 589-8220 • TWX 810-323-1580

# CTS OF BERNE, INC.

SUBSIDIARY OF CTS CORPORATION, ELKHART, INDIANA

**WORLD LEADER IN CERMET RESISTOR TECHNOLOGY**

# SINGLE-IN-LINE CERMET RESISTOR NETWORKS

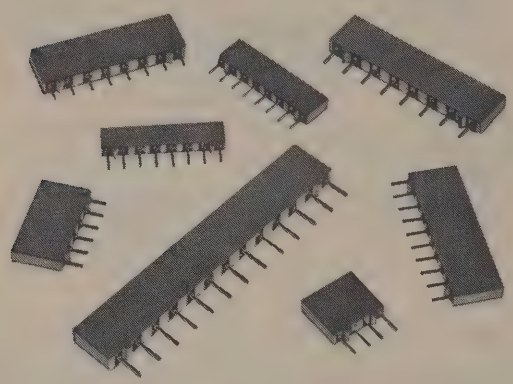
## *CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices*)*

CTS . . . Leader in the field of **Low Profile** space-saving Cermet Resistor Modules. Readily recognizable because of the familiar CTS Blue.

As is well illustrated, these modules have been specifically designed to save space.

So if you want to reduce the size of your design or add more complex circuitry without increasing size, CTS rates top consideration.

Most appealing is the fact that "The Little Blue Brick" is an extensive "Off The Shelf" item with CTS.



750 Series

### *FEATURES:*

- Compact edge mount modules
- Ultra high stability and reliability
- Automatic insertion capabilities
- Reduced insertion time
- Fewer items to inventory
- Space savings over individual resistors
- Available with capacitors and/or active devices*
- Available with .100", .125" and .150" lead centers

### *ELECTRICAL AND MECHANICAL SPECIFICATIONS:*

**Description:** Cermet thick film single-in-line resistor networks.

**Standard Resistance Range:** 33Ω through 1 MegΩ.

**Special Resistance Range:** Below 33Ω and above 1 MegΩ.

**Resistance Matching (2 like resistors):**
50Ω to 30KΩ — 0.5%
30KΩ to 250KΩ — 1%
250KΩ to 3 MegΩ —2.5%

**Ratio Matching:**
50Ω to 30KΩ — ±1%
30KΩ to 250KΩ — ±2%
250KΩ to 3 MegΩ —±5%

**Standard Temperature Coefficient:** ±250 ppm/°C.

**Special Temperature Coefficient:** ±100 ppm/°C.

**Temperature Coefficient Tracking:** Available to 50 ppm/°C.

**Standard Resistance Tolerance:** ±5%.

**Special Resistance Tolerance:** to ±0.5% or ½Ω (whichever is greater).

**Substrate Material:** Alumina.

**Resistor Material:** Cermet - thick film.

**Insulation Coating:** Organic - epoxy phenolic.

**Lead Material:** Solder coated copper.

**Solder:** 60/40 Tin/Lead.

**Lead Strength:** 5# pull.

**Wattage Rating @ 70°C** (see chart below).

| Environmental Performance Characteristics | | |
|---|---|---|
| For units less than .340" high, refer to page 8 for performance characteristics. **Test** | **Allowable Resistance Change** CTS Max △ R | CTS Avg. △ R |
| Load Life: 1,000 hrs., 0.1 watt per resistor at 70°C | ±0.40% | ±0.20% |
| Moisture Resistance: 0.1 rated wattage at 70°C, 90-98% humidity, 1,000 hrs. | ±0.50% | ±0.20% |
| Insulation Resistance: Measured wet after moisture resistance test, 200 VDC | Greater than 1000 megohms | |
| Low Temperature Exposure: −63°C, 4 hrs. | ±0.10% | ±0.04% |
| Thermal Shock: 5 cycles, −63°C to +125°C, no load | ±0.10% | ±0.03% |
| Short Time Overload: 2.5 times rated voltage, 5 sec. | ±0.25% | ±0.05% |
| Terminal Strength: 5 lb. tensile & compression, 30 sec. | ±0.10% | ±0.03% |
| Effect of Soldering: 60/40 solder, 246°C, 2 sec. | ±0.10% | ±0.05% |

| Lead Centers | Ht. of Module (Max.) | Number of Pins | | | | | | | | | | |

*Consult factory for resistance values higher than those shown above.

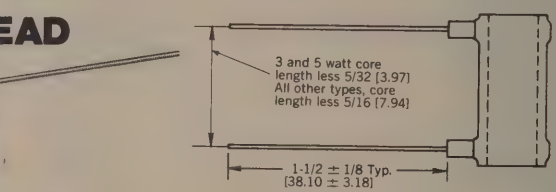
**Tolerance:** Standard tolerance is ±3% and ±5% 1 ohm and above; ±10% below 1 ohm.

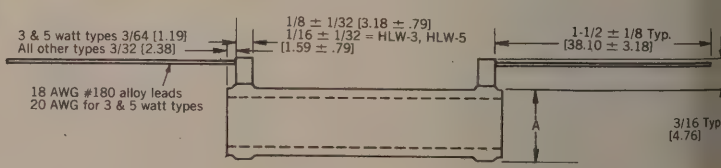
**Temperature Coefficient:** ±50 PPM/°C except on low values.

**Lead Material:** Standard material is tinned copperweld.

## DALE TYPE HLW TUBULAR LEAD

### Power Wirewound Resistors





With 18 AWG or 20 AWG #180 alloy lug-attached leads to facilitate direct electrical connection by soldering or welding. Not covered by MIL-R-26 but meets all electrical and mechanical requirements.

| FLAT | ALL STYLES | 08 | 09, 16, 18 | 5/64 [1.98] |
| MIN. FLAT | ALL STYLES | 10 | 13 | 3/64 [1.19] |

**STANDARD TERMINAL** will be supplied unless optional terminal is specified.

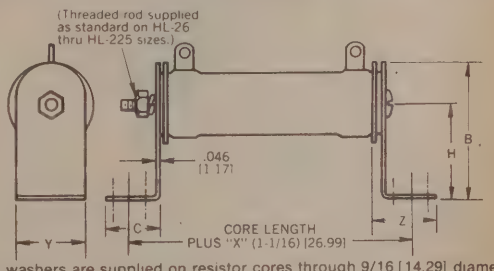
**OPTIONAL TERMINAL** available on request.

**TERMINAL FINISH** – Finish for terminal styles 14, 15, 16, 17 and 18 is limited to nickel plated steel (N). All other terminals will be supplied in tinned finish (Z) unless otherwise specified. Optional finishes are nickel plated (N) for HL's, bare alloy 180 (W) for HLW lead styles. Specify proper suffix in part number designation when ordering.

# MOUNTING SPECIFICATIONS

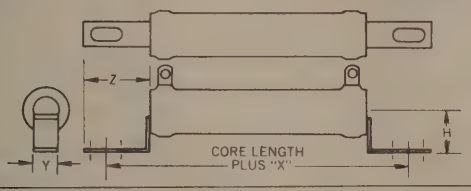
## HORIZONTAL THRU-BOLT

| BRACKET TYPE | X | Y | Z | H | MOUNTING SLOT | C | B |
|---|---|---|---|---|---|---|---|
| 101 | 1-1/16 [26.99] | 1/2 [12.70] | 55/64 [21.83] | 1 [25.40] | 7/32 x 7/16 [5.56 x 11.11] | 3/4 [19.05] | 1-3/8 [34.92] |
| 102 | 1-1/16 [26.99] | 3/4 [19.05] | 55/64 [21.83] | 1-1/4 [31.75] | 7/32 x 7/16 [5.56 x 11.11] | 3/4 [19.05] | 1-3/4 [44.45] |
| 103 | 1-1/16 [26.99] | 1-1/4 [31.75] | 1 [25.40] | 1-1/2 [38.10] | 9/32 x 9/16 [7.14 x 14.29] | 7/8 [22.22] | 2-1/8 [53.98] |



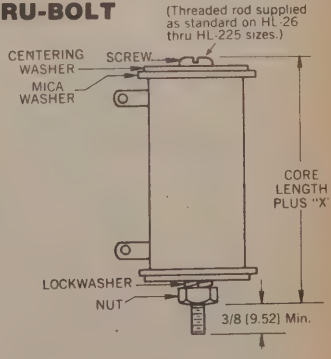
**Note:** Flat washers are supplied on resistor cores through 9/16 [14.29] diameter.

## PUSH-IN



| BRACKET TYPE | X | H | Y | Z | HOLE |
|---|---|---|---|---|---|
| 201 | 13/16 [20.64] | 1-25/64 [35.32] | 1/2 [12.70] | 11/16 [17.46] | .188 x .250 [4.78 x 6.35] |
| 202 | 11/16 [17.46] | 31/32 [24.61] | 3/8 [9.52] | 5/8 [15.88] | .175 x .359 [4.44 x 9.12] |
| 203 | 5/8 [15.88] | 43/64 [17.06] | 1/4 [6.35] | 15/32 [11.91] | .161 Dia. [4.09] |
| 204 | 3/8 [9.52] | 9/32 [7.14] | 1/4 [6.35] | 11/32 [8.73] | .144 Dia. [3.66] |
| 205 | 13/16 [20.64] | 1-25/64 [35.32] | 1/2 [12.70] | 11/16 [17.46] | .196 x .260 [4.98 x 6.60] |
| 206 | 23/32 [18.26] | 31/32 [24.61] | 3/8 [9.52] | 5/8 [15.88] | .196 x .375 [4.98 x 9.52] |
| 207 | 15/32 [11.91] | 9/32 [7.14] | 5/16 [7.94] | 7/16 [11.11] | .173 x .266 [4.39 x 6.76] |
| 208 | 5/8 [15.88] | 43/64 [17.06] | 5/16 [7.94] | 17/32 [13.49] | .173 x .296 [4.39 x 7.52] |

## VERTICAL THRU-BOLT



**Note:** Flat washers are supplied on resistor cores through 9/16 [14.29] diameter.

| BRACKET TYPE | X (Approximate) | THREAD |
|---|---|---|
| 301 | 7/16 [11.11] | 8-32 |
| 302 | 1/4 [6.35] | 8-32 |
| 303 | 1/4 [6.35] | 10-32 |

# CTG PRECISION WIRE WOUND RESISTORS & NETWORKS

Charles T. Gamble Industries has engineered and designed non inductive precision wire wound resistors to meet and exceed the requirements of MIL-R-93. These resistors are completely sealed against the effects of high humidity and salt water immersion cycling. The material used in the manufacture of our resistors has a very high dielectric strength. The bobbin material used in winding the resistors is one and the same as the encapsulating material. All resistors use resistance wire with very low thermal E.M.F. to the copper leads. Where thermal effects can be disregarded, welded construction with nickel alloy leads may be specified.

- Temperature Coefficient: Standard is ±10PPM/°C. T.C.'s as low as ±2PPM and as high as 6000PPM/°C can be supplied
- Tolerance available: from ±1.0% to ±0.001%

**NETWORKS: RC NETWORKS, LADDER NETWORKS, VOLTAGE DIVIDERS, BINARY NETWORKS**

**Standard Axial Lead Precision Resistors** have been designed and engineered to offer high reliability and stability throughout a wide range of environmental factors.

**Subminiature Axial Lead Precision Resistors** have been designed for applications where space is a prime factor

**Printed Circuit Resistors** are designed for printed circuit board application, where space is a factor.

**Radial Lug Resistors** are supplied with a thru hole for mounting to the chassis by means of a #6 thru bolt.

**Power Rating —**
Maximum wattage ratings at 25°C through 125°C derated to 145°C at zero voltage

# AXIAL LEAD POWER WIRE WOUND SILICONE COATED RESISTORS

## GENERAL SPECIFICATIONS

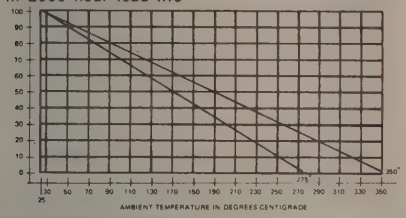
- Designed to meet the requirements of MIL-R-26
- Standard temperature coefficient ±20PPM additional TC's available from 5PPM/°C to 5500/°C
- Tolerance: ±1.0% standard. Available to ±.01%
- Wattage: ½ watt to 20 watts
- Coating — High temperature silicone, withstands moisture, salt water immersion, and cleaning solutions
- Leads: Tinned copperweld standard, other alloys available

**Power Ratings:**

Ratings are based on a 25°C ambient and either a 275°C (max.) or 350°C (max.) hotspot temperature

Characteristic U: Will result in .5% max. △R in 2000 hour load life

Characteristic V: Will result in a 3% max. △R in 2000 hour load life



**Non-Inductive Winding:**

- For non-inductivxe winding add prefix N
- Divide maximum resistance values by two
- Multiply maximum working voltage by .707

Non-Inductive styles are ordered as CGN. Specify Axial or Radial Lead when ordering!

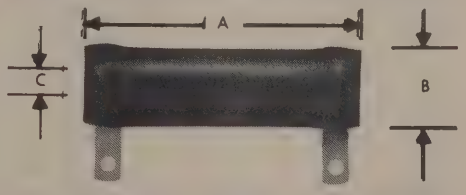
# VITEROUS FIXED AND ADJUSTABLE RESISTORS

## FIXED AND ADJUSTABLE TYPES

Tubular ceramic power resistors are wound with NiCr or CuNi resistance wire alloys. A military grade of ceramic tube coated with a high temperature vitreous enamel is used. This design meets the requirements of MIL-R-26C. Positive center of winding pitch and tension eliminates any possibility of hot spots.

- Wattage rating from 5 watts: 250 watts.
- Standard tolerance: ±5%.

Ayrton-Perry winding techniques may be employed to minimize inductance.



| Type | Military Spec. | Dimensions A | Dimensions B | Dimensions C | Max. Resist. | Comm. Watt | MIL Watts |

INTERNATIONAL MANUFACTURING SERVICES

IMS, INC

# THICK FILM CHIP RESISTORS

**International Manufacturing Services Inc.**

50 Schoolhouse Lane ● Portsmouth, R. I. 02871 ● (401) 683-9700

● ● ● **Delivery** ● ● ● **over 1,500,000 pcs in stock** ● **Consistent High Quality** ● **Low Cost** ● **Samples Available on Request Delivery to suit your needs**

## FEATURES

- Low profile for hybrid packaging
- Precision Geometries by Laser
- Passivation Coating
  Protective Glass over resistor
- 96% Alumina substrates
- **Resistance Range**:
  10 ohms to 25 megohms Standard
  .5 ohms to 2000 megohms Available
  Tolerance to Customer Spec.
  Designed to meet Mil-R-55342

## OPTIONS

- **Terminations**
  Gold
  Platinum Gold
  Platinum Silver
  Palladium Silver
  Solder tinning available
- **Leads Attached**
  (see Standard & Hi-Powered Resistors)
- **T.C.R.** (Varies by size & value)
  ±250ppm/°C measured from -55°C to 125°C with 25°C as reference
  Custom Orders to ±50ppm/°C
- **Color Coding**
  On back indicates value and termination direction
- **Back Side Metalization**
  For Heat Sink or Attachment to Circuit

## STANDARD RESISTORS

| IMS # | Power Dissipation Rating 25 C Free Air | LENGTH (L) IN. | LENGTH (L) M.M. | WIDTH (W) IN. | WIDTH (W) M.M. |
|---|---|---|---|---|---|
| 0 | 60 mw (35V) | .045 | 1.14 | .030 | .76 |

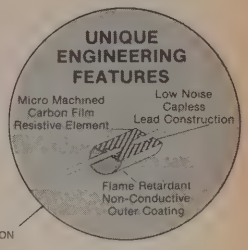
## 5%, 2% AND 1% CARBON FILM RESISTORS

FUSE ACTION — NON-FLAMMABLE



UNIQUE ENGINEERING FEATURES
Micro Machined Carbon Film Resistive Element
Low Noise Capless Lead Construction
Flame Retardant Non-Conductive Outer Coating
CAPLESS CONSTRUCTION ideally suited to HI DENSITY board population Permits close to the shoulder bends

### FEATURES

- △ High Stability
- △ Lowest Noise
- △ Smallest Dimensions
- △ Capless Design
- △ Meets MIL Specifications
- △ Extremely Long Life
- △ Produced And Checked By Automatic Equipment
- △ Failure Rate Less Than $10^{8}$/Hour (MTTF More Than $10^{8}$)
- △ Solderability as per MIL-STD-202
- △ Insulation Resistance Higher Than $10^{9}$ Ohms
- △ Terminal Strength > 8 Lbs.
- △ Equivalents: MIL R-10509, MIL R-39, MIL R-11
- △ Color Code: MIL-STD-129
- △ Available With Weldable Leads
- △ Available in Bulk Pack or Taped and Reeled

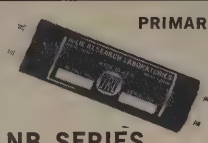
# JULIE RESEARCH LABORATORIES INCORPORATED

# PRECISION WIREWOUND RESISTORS



**PRIMARY RESISTANCE AND RATIO STANDARDS**

These ultra-stable oil-immersed resistors provide absolute accuracy and stability heretofore unattainable in conventional precision components. (See JRL Bulletins B-5 and B-6).

**NB SERIES**

## PRECISION RESISTORS FOR EVERY APPLICATION

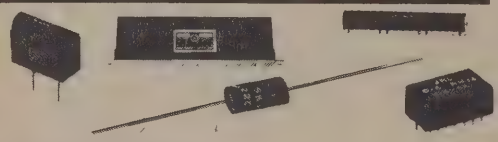
Precision Resistors for every application imaginable; high quality, low priced precision resistors are available for your every design need and at delivery schedules (1-2 weeks) even distributors can't beat!! JULIE RESEARCH resistors are guaranteed for a lifetime performance in almost every value, tolerance and stability.

Available as individual, ratio or network assemblies, these expertly manufactured and trimmed resistors assist you in eliminating countless hours of Production Test time from your design. In addition, the use of these very stable resistors contribute to reliable design and reduced component count. Specify a Julie Resistor. Better yet, call us and we will assist in helping you get the best price-performance unit your application and budget will allow.

## JUST A FEW OF THE PROVEN APPLICATIONS FOR THESE LOW REACTANCE HIGH PERFORMANCE RESISTORS ARE:

- Transducer Calibrating Networks
- Current Metering
- Gyro Torquing
- AC and DC Precision Bridge Elements
- Amplifier Summing Elements
- D/A Converters
- Reference Divider
- Precision Multiplier
- Resistive Divider Networks
- Shunting
- AC or DC Ratio
- High Performance MIL Spec
- Zener Trimming Networks

## RESISTOR STYLES



### SPECIFICATIONS

**Range:** Individual Resistors, 0.1 ohm to 5 megohms. Ratio Sets, 1:1 to $10^6$:1 depending on total resistance required.
**Accuracy:** Standard accuracy of resistors, 0.005% for values from 1000 ohms to 5 megohm. Standard accuracy of ratio sets, 0.0025% for ratios near 1:1. Accuracies from 0.002% to 0.1% are available (at corresponding prices) on special order.
**Stability:** Resistors, 0.002% per year for standard ranges.
**Accuracy Over Military Temperature Range:** ±0.02% from −45°C to +85°C.
**Matching Over Military Temperature Range:** ±0.005% from −45°C to +85°C.
**Retrace Over Military Environmental Conditions:** 0.002%.
**Temperature Coefficient:** Resistors, 5 ppm/°C standard. (Available as low as 1.0 ppm/°C). Ratio sets, 2.5 ppm/°C standard. (Available as low as 0.7 ppm/°C).
Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.
**Thermal Transients:** All thermal-induced transient effects, e.g.: self-heating, Seebeck and Peltier effects, are less than 0.0015% at rated power dissipation. Self-heating and time constants of thermal transients are reduced to 10% of normal values in air.
**Current Capability:** To 2 Amperes.
**Voltage:** Between Terminals, 300 volts maximum. Terminals to Case, 500 volts maximum.

### SPECIFICATIONS

**Range:** Individual Resistors, 1 ohm to 10 megohms. Ratios, 1:1 to $10^6$:1, depending on total resistance required.
**Accuracy:** Standard accuracy of resistors, 0.01%, for values from 100 ohms to 5 megohm. Standard accuracy of ratios, 0.005%, for ratios near 1:1. Intermediate accuracies of 0.05% and up and higher accuracies to .0025% are available on special order.
**Stability:** Resistors 0.003% per year for standard ranges.
**Accuracy Over Military Temperature Range:** 0.02% from −30°C to +85°C.
**Matching Over Military Temperature Range:** to 0.005% from −45°C to −85°C.
**Retrace Over Military Environmental Conditions:** 0.003%.
**Temperature Coefficient:** Resistors, 5 ppm/°C standard, (available as low as 1.0 ppm/°C). Ratios, 2.5 ppm/°C standard, (available as low as 0.7 ppm/°C).
Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.

### SPECIFICATIONS

**Range:** Individual Resistors, .1 ohm to 100 ohms.
**Accuracy:** Standard accuracy of resistors, 0.01%, for values from 1.0 ohm to 100 ohms. ($R_1$xG)±.005% (CH).
**Stability:** Resistors 0.003% per year for standard ranges.
**Accuracy Over Military Temperature Range:** 0.02% from −30°C to +85°C
**Retrace Over Military Environmental Conditions:** 0.003%.
**Temperature Coefficient:** Resistors, 5 ppm/°C standard, (available as low as 2.5 ppm/°C).
Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.
**Voltage and Power Ratings:** See chart.
**Construction:** See charts.
**Group Encapsulation:** Special techniques permit group encapsulation of high-accuracy units on a high-yield basis, enabling better accuracies at competitive costs. (See JRL Bulletin B-11.)

### SPECIFICATIONS

The DIP resistor is available with 7 resistance values in a 14 pin DIP or 8 resistance values in a 16 pin DIP.
**Resistance Range:** 100Ω to 100KΩ **Ratio Accuracy:** Up to .003% **Dimensions:**
**Absolute Acc:** .01% **Accuracy Over MIL Environmental** ¾" x ½" x 5/16"
**Tc:** 5 PPM/°C **Conditions:** .005% ABS .002% Ratio **Delivery:** 3-4 weeks

## LOWEST, LOW REACTANCE OIL FILLED AND ENCAPSULATED THA-H, CH, HCH, RESISTORS AXIAL WIRE LEAD CONSTRUCTION

| Style | Size | AWG Leads | Max. Res. | Volt | Power | MIL R-93 |
|---|---|---|---|---|---|---|
| H32 | ⅜ x ½ | 20 | 250 K | 250 | ½ W | — |
| H33 | ⅜ x ¾ | 20 | 350 K | 450 | ⅓ W | RB 53 |
| H34 | ⅜ x 1 | 20 | 500 K | 500 | ½ W | RB 52 |

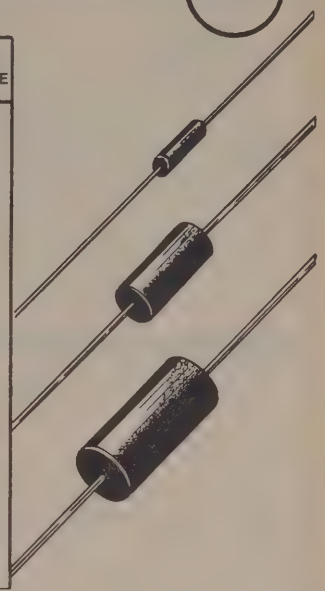
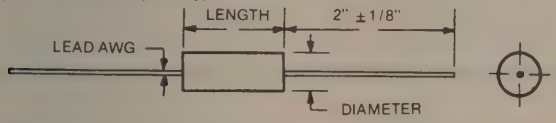
†Indicates Most Popular Types.





**TOLERANCES AVAILABLE:**

Absolute accuracy for— 1. Precision Resistors from ±5% to ±.0025%
2. Power Resistors from ±10% to ±.01%
Ratio Matching in resistor sets available as close as ±.001%

**TEMPERATURE COEFFICIENTS:**

1. Standard temperature coefficient is ±10PPM/°C, slightly higher for low ohmic values.
2. Temperature coefficients are avialable as low as ±1PPM/°C, over a limited range.
3. T.C. Matching available as close as ±0.5PPM/°C at +25°C for matched sets.
4. T.C. TRACKING available as close as ±1PPM/°C over a limited range.
5. Special temperature coefficients available from +80PPM/°C to +6000PPM/°C.

**STABILITY:**

Precision Resistors— 0.001% for the first year, 0.0025% over a three year period.
Power Resistors— 0.003% for the first year, 0.005% over a three year period.

**ENVIRONMENTAL REQUIREMENTS:**

All KRL wire wound resistors meet or exceed the requirements of—
1. MIL-R-93 and MIL-R-39005 for Precision Resistors
2. MIL-R-26, MIL-R-39007 and MIL-R-18546 for Power Resistors.

## KRL Economy Line Resistors — EC SERIES

**CHARACTERISTIC V:** Coated resistors are available in 3% and 5% tolerance only.

**CHARACTERISTIC U:** Coated or Molded resistors are available in any tolerance.

# KELVIN

## Precision Wire-wound Resistors, Power Resistors & Resistor Networks

Kelvin is a pioneer in the field of very high stability, close tolerance, precision wire-wound resistors. Resistors shown represent only part of the broad Kelvin line. Complete catalog data is available on request.

## HIGH RELIABILITY "HRL" SERIES

Kelvin's "HRL" Series was generated after years of experience on the Polaris, Gemini, Apollo and other important high reliability missile and space programs. Kelvin has combined the many and varied parameters of these programs into a single resistor series, designed to meet the stringent high reliability requirements of many of today's military and commercial systems.

Kelvin's reliability goal, through the design and controls of the "HRL" Series resistor and the use of acceptance inspection procedures, was to produce precision wire-wound resistors having failure rates better than .0005%/1000 hours at a 90% confidence level. Present level is .00064%/1000 hours at a 60% confidence level.

All "HRL" resistors have a documented history. This includes traceability from the spool analysis of the resistance wire, through each phase of the production operation to the finished product. Each resistor is screened to eliminate INFANT MORTALITY. This consists of a 100 hour burn in at full rated power at 125°C and a short time overload at twice the rated power. Other tests are conducted as outlined in Bulletin HR 02449, which presents the complete procedure and methods approach for production of "HRL" resistors.

## STANDARD TYPES

TOLERANCES: 1% through .005% available on most types and resistance values.

TEMPERATURE COEFFICIENT: ±20 ppm/°C standard.

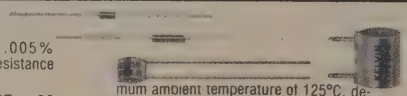
T.C.s available to 1 ppm depending on size, value and temperature range.

WINDINGS: Non-inductive.

*WATTAGE RATINGS: Based on a maximum ambient temperature of 125°C, derated to zero watts at +145°C

**RESISTANCE MAX.: Contact factory for availability of values above maximum shown.

*All Lug Types available with #20 gauge radial leads (except EP-22) by specifying letter "R" after type number.



### LUG and RADIAL LEAD

| KELVIN TYPE | COMMERCIAL WATTAGE* | RESISTANCE MAX.** | DIA 1/32 | LENGTH 1/32 | MAX. VOLTS | TERMINAL TYPE* | MOUNTING HOLE |

## FAST RISE TIME APPLICATIONS

"RT" style resistors provide exceptionally high frequency performance, in addition to the other recognized advantages of wire-wound resistors. "RT" resistors can be supplied with rise times as low as 25 nanoseconds (from 10% to 90% of peak pulse amplitude at 100 KC), depending on resistance values and physical configurations. See Catalog #763

TOLERANCES: 1% through .005% available on most types and resistance values.

TEMPERATURE COEFFICIENT: ±20 ppm/°C standard.

T.C.s available to 1 ppm depending on size, value and temperature range.

WINDINGS: Non-inductive.

*WATTAGE RATINGS: Based on a maximum ambient temperature of 125°C, derated to zero watts at +145°C.

**RESISTANCE MAX.: Contact factory for availability of values above maximum shown.

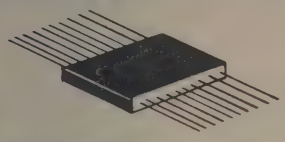
## RESISTOR NETWORKS



Kelvin develops and produces, to customer requirements, packaged resistor networks for use as voltage dividers, analog to digital converters, summing and integrator networks, binary resistive networks, R-2R ladders and special configurations.

Standard resistor networks in two series (R-2R and BCD) are available from catalog specifications. The potting, encapsulation and physical size flexibility of Kelvin resistors and case production techniques makes it possible to offer custome built units to exact customer requirements at reasonable prices. Our engineering department will review your requirements and submit price quotation and technical notes. 12 page Bulletin LN-37 available on request.

Electrical Characteristics Available: Nominal resistance ratio tolerance to ±.002% (DC). Resistance VDR ratio tolerances as close as .0005% (DC). Long term resistance ratio stabilities to ±.001% peryear. Low reactances to provide rise times as low as 25 nanoseconds. Temperature coefficients of resistors to track as close as 0.5 ppm/°C. from −55°C to +125°C

## SERIES KM MOLDED, POWER RESISTORS

Series KM are general purpose, reliable power resistors designed to be used where heat sinks are not available or not desired. These resistors are extremely stable for their size as compared to film types. Series KM are considered to have the lowest dollar per watt cost of precision resistors. Send for Bulletin K-1

**TOLERANCES:** 0.025% through 5.0%

**TEMPERATURE COEFFICIENT:**

±20 PPM/°C (170 ohms and above)
±30 PPM/°C (10 to 170 ohms)
±50 PPM/°C (1 to 9.99 ohms)
±90 PPM/°C (below 1 ohm)

T.C.s to 5 PPM/°C available depending on size and value.

**NON-INDUCTIVE STYLES:** Reduce resistance values by approximately 50%; derate maximum working voltage by 30%. Add "N" to part number. Example: KMN025.

| KELVIN PART NUMBER | WATTAGE G & U 275°C | WATTAGE V 350°C | DC Working Voltage | Maximum Resistance | SIZE and TOLERANCES Length | Diameter | Lead Length (±0.125) | Lead Diameter (AWG) | Equivalent Military Styles MIL-R-26E |

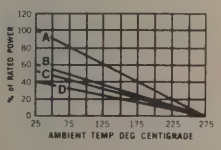
## SERIES KC CHASSIS MOUNT POWER RESISTORS

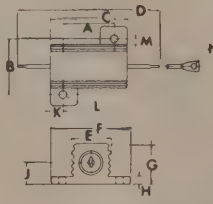
**DERATING CURVES**

Derating is required for reduced chassis mounting area and high ambient temperatures

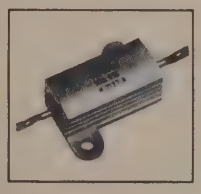
Curves.



A — When mounted on proper aluminum chassis.
48 sq. inches 0.040 aluminum for KC500 and KC1000
70 sq. inches 0.040 aluminum for KC2500
144 sq. inches 0.040 aluminum for KC5000



B — Unmounted KC500 and KC1000
C — Unmounted KC2500
D — Unmounted KC5000



Designed to provide maximum heat dissipation through heat sink and finned case configuration. Ideally suited where large amounts of power must be dissipated and small size is important. Capable of maintaining their precision tolerance in wattage ratings up to 50 watts. Send for Bulletin K-3

**TOLERANCES:** 0.05% through 5.0%

**TEMPERATURE COEFFICIENT:**

±20 PPM/°C (170 ohms and above)
±30 PPM/°C (10 to 170 ohms)
±50 PPM/°C (1 to 170 ohms)

T.C.s to 5 PPM/°C available depending on size and value

NON-INDUCTIVE STYLES: Reduce resistance values by approximately 50%; derate maximum working voltage by 30%. Add "N" to part number. Example: KCN500.

| KELVIN PART NUMBER | Watts | DC Working Voltage | Max Res | SIZE and TOLERANCES A ± .005 | B ± .005 | C ± .031 | D ± .062 | E ± .015 | F ± .015 | G ± .015 | H ± .010 | J ± .010 | K ± 0.10 | L ± .005 | M ± .015 | N ± .005 | Mtg. Screw Size | MIL-R-18546 |

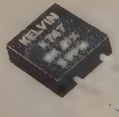
## K747 WIRE WOUND RESISTOR

| | |
|---|---|
| Lead Size: | #22 (.025) solder coated brass |
| Lead Spacing ℄ to ℄: | .150" (±.010) |
| Wattage: | .3 watts |
| Voltage: | 200 volts |
| Resistance Range: | .5Ω to 400KΩ |
| Resistance Tolerance: | 1% thru .01% |
| Temperature Coefficient: | ±5 PPM standard (0-85°C) |
| TC Tracking: | Available to ±1 PPM/°C |
| Stability: | 25 PPM/year |
| Rise Time: | 25 nanoseconds (value dependent) |
| Noise: | Not measurable on commercially available equipment |
| Environmental: | Exceeds all requirements of MIL-R-39005 |

Designed specifically to interchange with film resistors of same physical configuration. Performance characteristics show the K747 series to be superior in almost all instances. Send for Bulletin K747.

For closer tolerances to .005% and temperature coefficients to 1 PPM (0 to 60°C referenced to 25°C) request Bulletin K746.



SIZE: 320± .020 H.
295± .010 L.
100± .015 W

**Kelvin pioneered the close tolerance, close temperature coefficient and excellent long term stability wire-wound resistor. State-of-the-art manufacturing techniques and superior testing capabilities yield the ultimate in quality at a competitive price. Please contact your nearest Kelvin representative or the factory direct for further details.**

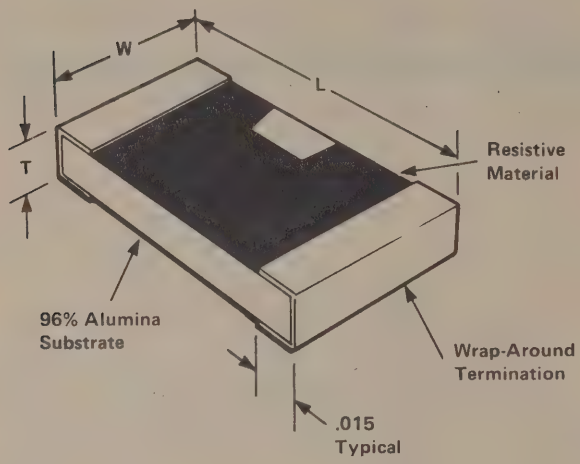
# PRECISION THICK FILM CHIP RESISTORS



Microplex chip resistors for thick and thin film hybrid circuits:

- Eliminates expensive multiple screenings
- Provides very low to very high resistance values in a small area
- Wrap-around terminations provide assembly ease with standard bonding techniques
- Allows high density packaging
- Offers uniform tolerances
- Reduces trimming needs

### GENERAL SPECIFICATIONS

Tolerance ±20%, ±10%, ±5%, ±1%, ±2% upon request

### MIL SPECIFICATIONS

Designed to meet applicable portions
MIL-R-55342
MIL-STD-202

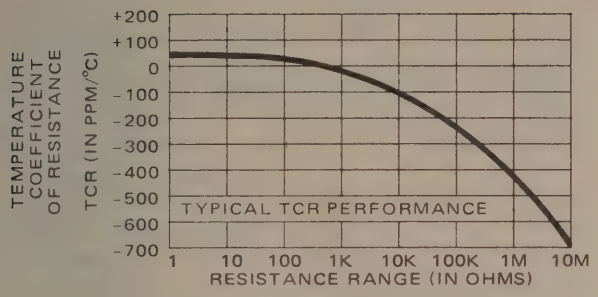
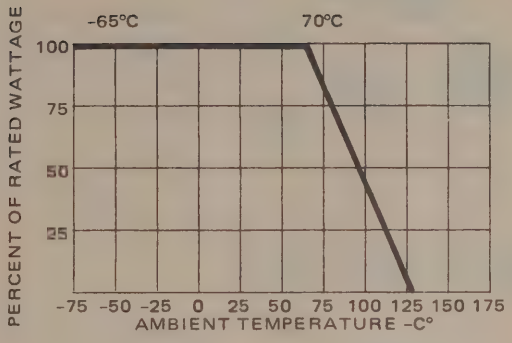
## TYPICAL CHARACTERISTICS





## SPECIFICATIONS

Temperature Cycling: Mil-Std-202A, Method 102A, Condition C, Change is less than ±1%.

Life: Better than ±1% at 70°C for 1000 hours at the DC voltage required to dissipate full rated power.

Maximum Operating Voltage: 100 WVDC (not to exceed maximum power limitation).

Short Time Overload: 2.5 times maximum DC voltage required to dissipate full-rated power for 5 seconds at 25°C.

Power Rating: At 25°C in free air.

Termination Materials: Platinum Palladium Silver (Standard), Platinum Gold, Silver.

## HOW TO ORDER

MCR A 21 2 J X Z

- MCR — MICROPLEX CHIP RESISTOR
- A — SIZE (see chart)
- 21 — RESISTANCE VALUES IN OHMS: significant figures
- 2 — RESISTANCE VALUES IN OHMS: number of zeros
- J — TOLERANCE (F = 1%, G = 2%, J = 5%, K = 10%, M = 20%)
- X — TERMINATION MATERIAL: X = Platinum gold, Y = Platinum palladium silver, S = Silver
- Z — SOLDER DIPPED With SN62 (available with X or Y terminates only)

Jumpers for Interconnections and Crossovers

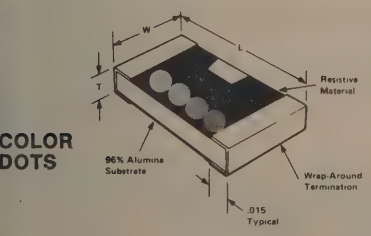
| JB | .075 | .030 | .020 |

# COLOR CODE MARKED CHIP RESISTORS



Custom color code marking of chip resistors in accordance with EIA standard Color Code for resistors or to your particular color code system. Ask for free samples.

Standard colors are used as specified in the GEN-101 RETMA chart supplied by the Electronic Industries Association. All color coded parts are marked with permanent marking ink which exceeds all the performance requirements of MIL-STD-202 for chemical resistance.

- Tolerances Available: ±.25%, 1%, 2%, 5%, 10%, and 20% for most resistance values.
- All types are available in untinned versions for conductive epoxy attachment.
- Hi-Rel screening available on all resistor types.
- Backside metalization available upon request.
- "Flip-Chip" resistors are solder tinned (SN-62).
- Wire bond resistors have gold metalization optimized for wire bonding.

MRC MILWAUKEE RESISTOR CORPORATION
700 WEST VIRGINIA STREET, MILWAUKEE, WI. 53204
Telephone: (414) 271-9900

# WIREWOUND POWER RESISTORS

## 8 to 2,000* Watts Vitreous Enamel, Silicone or Cement Coated

★ **STANDARD RESISTORS:** 8 THROUGH 225 WATTS . . . . . 8, 12, 20, 25, 50, 100 and 225 Watt, Vitreous Enamel in both FIXED and ADJUSTABLE (except 8 and 20 watt adjustable) are readily available. . . . . .

### CUSTOM RESISTORS

36 additional wattage ratings are available with different core diameters and lengths. Non-Inductive, Tapped, Live Bracket, Porcelain Bushings, Printed Circuit Board and other specialty items are also manufactured to customer specifications.

MILWAUKEE will satisfy your resistor requirements with custom values, tolerances , temp. coefficient, sizes and coatings easily with its engineering capabilities and production facilities.

### TERMINALS

All 8, 12 and 20 watt fixed resistors are standard with 1½" tinned leads. They are also available with conventional lug terminals. 12 watt adjustable and 25 watt through225 watt fixed and adjustable have lug type terminals. Single and double quick connect and many other special types of terminals are also available.

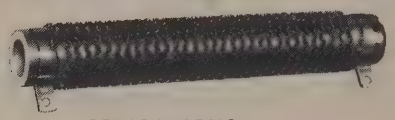
### MOUNTING

Spring clips, vertical through bolts and horizontal "L" brackets are available for all 8 through 225 watt sizes.

Ferrule mountings, special spring clips, mica washers, terminal hardware and other accessories are also available.

WRITE FOR OUR CATALOG WITH SPECIFICATIONS FOR VARIOUS MOUNTING OPTIONS

# RIBWOUND RESISTORS 40 – 2,000 WATTS



MILWAUKEE RIBWOUND RESISTORS ARE UNIQUE. . . . . The eveness of the crimping allows us to wind considerably higher ohmic values in any given wattage.....*If you have a particular problem or application - please contact our factory !*

### APPLICATIONS

Particularly useful where high energy is to be dissipated in the lower ohmic values†. With its ability to operate at about ½ the size of the equivalent round wire resistor. Mounting options are the same as for wirewound.

*† = MILWAUKEE'S EXCLUSIVE WINDING TECHNIQUES ALLOW AT LEAST 3 TIMES GREATER MAXIMUM OHMIC VALUES AS ARE NORMALLY COMPETITIVELY AVAILABLE !. . . . . .*

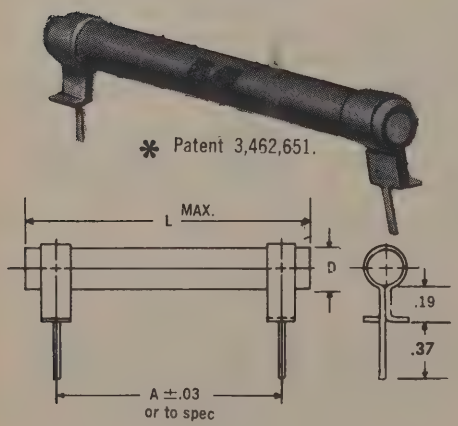
### COATINGS

MILWAUKEE'S variety of coatings is particularly convenient for the manufacture of resistors for use in special atmospheres. . . . . LET US KNOW OF YOUR SPECIAL REQUIREMENTS

### RIBWOUND CONSTRUCTION

Special resistance alloy ribbon is crimped and edgewound on the core. Depending on the particular alloy, the ribbon is spot-welded or silver soldered to the terminals. Ribwound resistors may be furnished in either fixed or adustable type and can be cement coated. Several 300 watt values are stocked. All other sizes are made to order.

# PCB PRINTED CIRCUIT BOARD RESISTORS*



**FIXED**

| WATTS | L | A | D | MAX. OHMS† |
|---|---|---|---|---|
| 3 | $1^{1}/_{32}$ | 0.6 | $^{5}/_{16}$ | 21,000 |
| 5 | $1^{5}/_{16}$ | 0.9 | $^{5}/_{16}$ | 39,000 |
| 7 | $1^{23}/_{32}$ | 1.3 | $^{5}/_{16}$ | 63,000 |
| 10 | $2^{1}/_{8}$ | 1.7 | $^{5}/_{16}$ | 86,000 |
| 15 | $2^{1}/_{8}$ | 1.7 | $^{13}/_{32}$ | 86,000 |
| 20 | $2^{5}/_{8}$ | 2.2 | $^{13}/_{32}$ | 114,000 |

**ADJUSTABLE**

| WATTS | L | A | D | MAX. OHMS† |
|---|---|---|---|---|
| 15 | $2^{1}/_{8}$ | 1.7 | $^{13}/_{32}$ | 20,000 |
| 20 | $2^{5}/_{8}$ | 2.2 | $^{13}/_{32}$ | 27,000 |

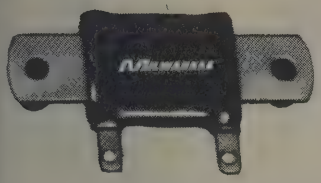
†=FOR HIGHER OHMS, CONSULT FACTORY

### FEATURES

- Built-in standoff keeps board cool.
- Mounting feet prevent rocking.
- Power ratings 3 to 20 watts.
- Complete OHM range.
- One-piece, welded terminals
- Rectangular leads .020 x .040 in.
- Silicon base coating. Vitreous enamel coating available.
- Standard tolerance ±5%.
- 20 PPM upon request.

MILWAUKEE RESISTOR CORPORATION
700 WEST VIRGINIA STREET, MILWAUKEE, WI. 53204
Telephone: (414) 271-9900

# OVALS

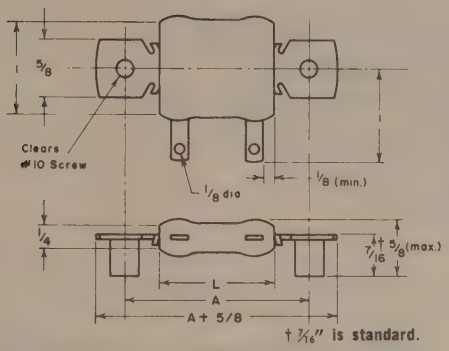


OVAL RESISTORS are for use where space saving is desired and where the use of the 'Heat Sink' function of the metal chassis, rack or panel may be employed. Resistance tolerance of ±5% is standard except on low resistance and multi-tapped units. COATINGS of vitreous enamel or silicone base are offered.

OVALS are available in regular or miniature sizes; an original development of MILWAUKEE Resistor.

Additional miniature oval core sizes are available increasing the possibility of taps and isolated sections. Other intermediate sizes are also available. Only regular ovals are available as adjustables.

## REGULAR

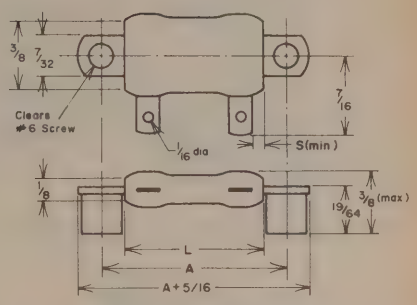


† 7/16" is standard.

| | | DIMENSIONS | |
|---|---|---|---|
| WATTS† | OHMS | A | L |
| 30 | 1.2 - 7,300 | 2" | 1 1/4" |
| 40 | .08 - 27,000 | 2 3/4" | 2" |
| 55 | .04 - 85,000 | 4 1/4" | 3 1/2" |
| 70 | .06 - 137,000 | 5 1/2" | 4 3/4" |
| 95 | .08 - 171,000 | 6 3/4" | 6" |

† = Rating based on mounting on steel panel 10" x 10" x .040".

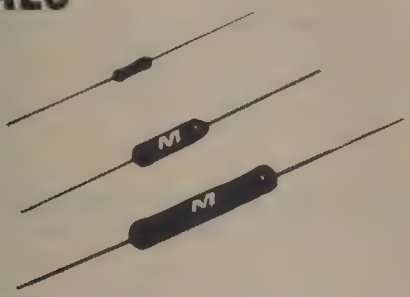
## MINIATURE



| | | DIMENSIONS | | |
|---|---|---|---|---|
| WATTS† | OHMS | A | L | S |
| 10 | .7 - 10,800 | 1" | 3/4" | 1/16" |
| 15 | .18 - 17,700 | 1 1/4" | 1" | 1/16" |
| 20 | .08 - 80,000 | 2 5/16" | 2" | 1/16" |

† = Rating based on mounting on steel panel 10" x 10" x .040".

# AXIALS

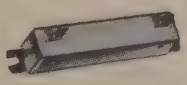


APPLICATIONS
- Electronic Circuitry
- Printed Circuits
- Radio, Television and Sound Reproduction
- Miniature Controls

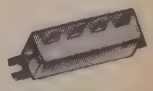
CONSTRUCTION
- Wire Wound on Ceramic Core
- All Welded
- Vitreous or Silicone Base Coating

FEATURES
- Rugged yet small.
- Highly stable.
- Matched expansion in core caps and coating for temperature stability.
- Standard 5% tolerance over 1 ohm, available in closer tolerances on request.
- Wattage ratings based on 325°C rise at 25°C ambient.
- Standard Sizes—3, 6.5, 11 watts.
- Leads Hot Tin Dipped.

# METAL CASE *



*PATENT 3,581,266



High Heat Sink—flush mounting dissipates heat.
20 to 100 Watts — higher on Specials
Quick Connect or Screw Terminals
Save: Space -First Cost- Assembly Cost

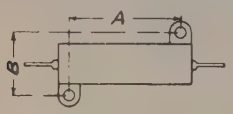
## INDUSTRY'S FINEST RESISTORS . . . Commercial, Military, High Reliability

# TYPE M METAL CLAD CHASSIS MOUNT RESISTORS

TYPE M CONSTRUCTION

Aluminum housed resistors for heat sink mounting. Meet or exceed requirements of MIL-R-18546D. Dielectric strength to 2500 volts rms.

All dimensions are inches nominal. Complete specifications available on request.



| STYLE | Rating Watts | A | B | Max. Resistance Ω | |
|---|---|---|---|---|---|
| | | | | Regular Winding | Non-Induct. |
| 3105M | 8 | .444 | .490 | 24,000 | 8,400 |
| 3010M | 14 | .562 | .625 | 30,000 | 10,500 |
| 3225M | 25 | .719 | .781 | 71,000 | 25,000 |
| 3550M | 50 | 1.562 | .844 | 230,000 | 80,000 |

M suffix designates regular single layer wind.
NM suffix designates non-inductive wind.

## TYPE MB HIGH WATTAGE
### BERYLLIUM OXIDE CORES

| STYLE | RATED WATTS 25°C ambient | |
|---|---|---|
| | chassis mounted | free air |
| 3105 MB/NMB | 15 | 6 |
| 3010 MB/NMB | 20 | 8 |
| 3225 MB/NMB | 35 | 14 |
| 3550 MB/NMB | 50 | 20 |

MB suffix designates regular single layer wind, NMB non-inductive wind.

## MIL-R-26E TYPE DESIGNATIONS

**EXAMPLE:** RW69 V 471

- RW69 — Body Style
- V — Characteristic, V only (350°C max.)
- 471 — Nominal resistance, Ω. Two significant digits plus third indicating number of zeros. Below 10ΩR = decimal and last digit is significant.

TOLERANCE: ±5% for values 1Ω and up; ±10% below 1Ω.
TC: ±260 ppm/°C 20Ω and up; 400 ppm/°C below 20Ω.

| MIL STYLE | SAGE STYLE | MIL WATTS | DEFINED OHMIC RANGE | |

| RW80U | 1000SB | 2 | — | .1 | 1240 | 3160 |
| RW81U | 250SB | 1 | 25 | .1 | 649 | — |

## MIL-R-18546D TYPE DESIGNATIONS

*Example:* RE65 G 1001

- RE65 — Style
- G — Characteristic, 275°C Max. G for regular inductive winding N for non-inductive winding
- 1001 — Nominal resistance, Ω. ±1% only. Three significant digits plus fourth indicating number of zeros. Below 100Ω R = decimal and following digits are significant.

T.C. ±30 ppm/°C 2000Ω and above
±50 ppm/°C under 2000Ω

| MIL STYLE | SAGE STYLE | MIL WATTS | DEFINED OHMIC RANGE | |
|---|---|---|---|---|
| | | | Min. | Max. (.001 wire) |
| RE60G | 3105M | 5 | .1 | 3320 |
| RE60N | 3105NM | 5 | 1.0 | 1650 |
| RE65G | 3010M | 10 | .1 | 5620 |
| RE65N | 3010NM | 10 | 1.0 | 2800 |
| RE70G | 3225M | 20 | .1 | 12100 |
| RE70N | 3225NM | 20 | 1.0 | 6040 |
| RE75G | 3550M | 30 | .1 | 39200 |
| RE75N | 3550NM | 30 | 1.0 | 19600 |

## CONSIDER THESE RESISTOR FEATURES

- Wattage Rating, ½ to 50 watts
- T.C. 20 ppm/°C or 10 ppm/°C
- 1000 volt rms body insulation
- Characteristic U or V wattage rating: to 275°C or 350°C
- Power load life stability <.5%/1000 hours
- Weldable leads when specified
- Non-inductive winding when specified

*Nytronics Components Group, Inc.*

## TYPE S CONSTRUCTION

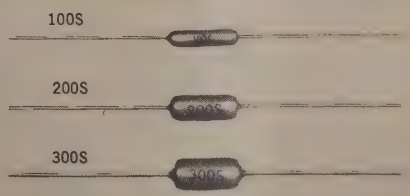
Showing ceramic core, spaced single layer winding, welded to stainless steel cap, and multiple layer coating.

Copperweld leads 60/40 Hot Solder Dip. Lead Length 2" ±1/16 * is supplied on all sizes unless otherwise specified on purchase order.

*Except 250S and 500S Styles, which are 1½" minimum.

## MINIATURE TYPE S "CORDWOOD" SERIES

1, 2, 3 watt .4 inch body length



# OHMITE® series 89 metal-mite® resistors

## FEATURES

- Molded construction
- Screw type mounting on housing
- Chassis design utilizes heat-sink effect
- Conventional power ratings produce high stability
- Housing surface allows for easy identification
- 5 through 50 watt models with standard or non-inductive winding

| OHMITE Type | MIL-R-18546 Type | Power Rating* Watts OHMITE** | MIL | Resistance Ranges (Ohms) 1% Tolerance | Standard Temperature Coefficient Value Ranges (Ohms) ±90 ppm | ±50 ppm | ±20 ppm |

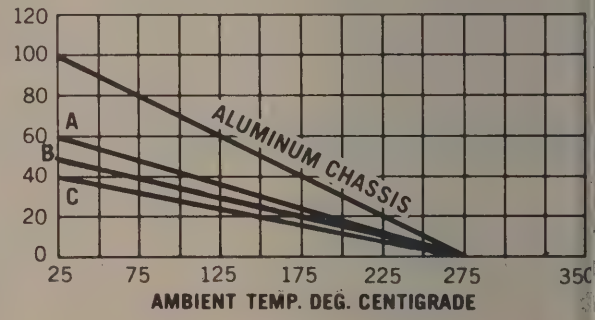
*Rating is based on chassis mounting area and stability proper heat sink.
4 x 6 x 2 x .040 aluminum chassis for 5 and 10 watt units
5 x 7 x 2 x .040 aluminum chassis for 25 watt units
12 x 12 x .059 aluminum panel for 50 watt units
**Types 8905 and 8910 will be stamped with wattages shown in parentheses but will be stamped with higher ratings upon customer request.

## DERATING

Series 89 resistors have an operating temperature range of −55°C to 275°C. Derating is required for reduced chassis mounting area and high ambient temperatures. The following curves apply to operation of unmounted resistors:

A = 5 and 10 watt units
B = 25 watt units
C = 50 watt units



## DIMENSIONS

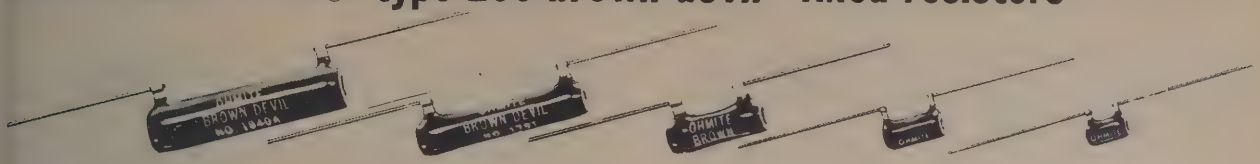
†Types 8905 and 8910 stamped with wattage shown in parenthesis.

OHMITE MFG. CO., a North AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, Illinois 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

# OHMITE® type 200 *brown devil* fixed resistors



BROWN DEVIL® (Type 200) resistors, are vitreous enameled, wirewound units long famous for ruggedness and durability in small power resistors. With the emphasis towards miniaturization and the current industry trend towards higher operating temperatures, Ohmite has been able to increase the ratings on two Brown Devil sizes. The 5 watt size is now rated **8 watts** and the 10 watt size is now rated **12 watts**. The 20 watt unit retains the same rating. The higher ratings may be confidently applied to any 5 or 10 watt unit now in the possession of users or distributors. At this time also, to meet the demand for lower wattage units, Ohmite introduces two, new, small stock sizes — 3 and 5¼ watts.

**Standard resistance tolerance** is ±5% for values 1 ohm or higher; ±10% for values below 1 ohm. Tinned leads 1½" long: 3 and 5¼ watt, 20 AWG; 8, 12 and 20 watt, 18 AWG.

[1]Popular items appear in BOLD print and are usually in stock at authorized Ohmite stocking distributors. Items appearing in LIGHT FACE print are available from stocking distributors but are not normally stocked in depth. Parentheses indicate non-stock standard items subject to a minimum handling charge per item.

# OHMITE® type 270 vitreous enameled fixed resistors

These lug type resistors are wire-wound on high quality ceramic cores, protected and insulated by Ohmite vitreous enamel — the time-proved standard covering that is the best conductor of heat for a material which must also be a good electrical insulator.

Resistance tolerance is ±5% for values 1 ohm or higher; ±10% below 1 ohm.

Wattage ratings are for use in free air. When resistors are mounted in closed spaces or where the circulation of air is restricted, they should not be used at more than one-half rating. Currents and voltages for reduced ratings can be obtained by multiplying full rating by the following factors: 75% load = .86, 66% = .81, 50% = .71, 33% = .57, 25% = .50.

Mounting brackets are automatically supplied in individual unit packs; supplied only when specified in bulk pack orders. See page 15, "Mounting Brackets for Tubular Resistors" to specify other brackets.

[1] Popular items appear in BOLD print and are usually in stock at authorized Ohmite stocking distributors. Items appearing in LIGHT FACE print are available from stocking distributors but are not normally stocked in depth. Parentheses indicate non-stock standard items subject to a minimum handling charge per item.

# OHMITE® dividohm® type 210 adjustable vitreous enameled resistors

"Dividohm" resistors make ideal voltage dividers for original equipment and replacement in transmitters, rectifiers and other apparatus. Such tapped "bleeders" are made by using one or more adjustable lugs, as required. "Dividohms" are also handy for obtaining odd resistance values, for adjusting circuits, and for use on equipment which must be set to meet various line voltages.

"Dividohm" resistors are vitreous enameled resistors on which a narrow strip has been left uncovered to expose a portion of each turn. Contact to any wire in this strip is made by an embossed contact on the adjustable lug (supplied).

WATT RATING: **The stated wattage rating applies only when the entire resistance is in the circuit.** When the adjustable lug is set at an intermediate point, the wattage rating is reduced in approximately the same proportion, i.e., if the lug is set at half the resistance, the wattage is reduced by one-half. A safe rule to follow is to make sure that the maximum rated current is not exceeded. This should be carefully checked particularly if the resistor will be used as a voltage divider with several adjustable lugs. Resistance tolerance is ±10% for the total resistance value.

[1]Popular items appear in **BOLD** print and are usually in stock at authorized Ohmite stocking distributors. Items appearing in LIGHT FACE print are available from stocking distributors but are not normally stocked in depth. Parentheses indicate non-stock standard items subject to a minimum handling charge per item.

*Mounting brackets are automatically supplied in individual unit packs; supplied only when specified in bulk packs.

## adjustable lugs

One "Screw Driver Type Adjustable Lug" is supplied with each unit. Lugs with a silver contact button can be ordered from the table shown below.

MOVING THE LUGS: Lugs always should be loosened completely before moving and not moved except while the current is off, in order to protect the exposed wire from mechanical or electrical injury and to protect the operator from dangerous voltages.

### STANDARD

| Core Diam. Inches | Screw Driver Type New Cat. No. | Screw Driver Type Old Cat. No. | Bakelite Knob Type New Cat. No. | Bakelite Knob Type Old Cat. No. |
|---|---|---|---|---|
| 5/16 | 2115 | 1058 | — | — |
| 7/16 | 2121 | 0358 | 2122 | 0359 |
| ¾ | 2125 | 1958 | 2126 | 1959 |
| 1⅛ | 2133 | 2158 | 2134 | 2159 |

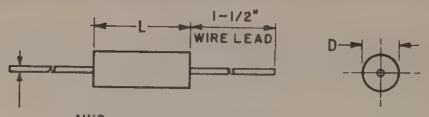
### With SILVER CONTACT BUTTONS

| Core Diam. Inches | Screw Driver Type New Cat. No. | Screw Driver Type Old Cat. No. | Bakelite Knob Type New Cat. No. | Bakelite Knob Type Old Cat. No. |
|---|---|---|---|---|
| 5/16 | 2116 | 2161 | — | — |
| 7/16 | 2123 | 2164 | 2124 | 2165 |
| ¾ | 2127 | 2166 | 2128 | 2167 |
| 1⅛ | 2135 | 2170 | 2136 | 2171 |

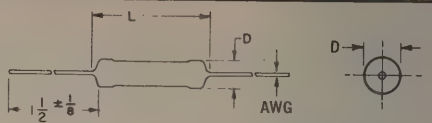
### DOUBLE THUMB SCREW ADJUSTABLE LUG

This adjustable lug, which is illustrated at left, features two advantages — ease of adjustment and less chance of damaging the resistance wire while moving lugs. Available for 1⅛" cores. Catalog No. **2160**

# OHMITE® wirewound resistors / axial lead and pc series



Series 88 & 99



Series 22, 44, 56 & 57

## OHMITE WIRE WOUND AXIAL LEAD RESISTORS

All of Ohmite's axial lead resistors feature a high quality resistance wire, single layer wound on a cylindrical ceramic core, and welded to metallic end caps. The leads are solder coated, weldable wire 1½" long. Specific mechanical and electrical parameters are listed in appropriate descriptions and tables for the individual Series below.

## AXIAL LEAD WIREWOUND RESISTOR SPECIFYING GUIDE

**VITREOUS ENAMEL — Molded — SERIES 99 — 5% Tolerance (1%-10% Available) — T.C. ±30 ppm/°C Typical**

| WATTS | Type | Res. Range | Maximum Length (″/mm) | Maximum Dia. (″/mm) | Leads 1.5″/38.1 mm Ga. |
|---|---|---|---|---|---|
| 1.5 | 995-1A | .1-6.65K | .437/11.1 | .140/3.6 | 24 |
| 2.25 | 995-2A | .1-6.49K | .390/9.9 | .219/5.6 | 20 |
| 3.25 | 995-3A | .1-22.1K | .562/14.3 | .234/5.9 | 20 |
| 5 | 995-5B | .1-53.6K | .953/24.2 | .234/5.9 | 20 |
| 6.5 | 995-5A | .1-80.6K | .937/23.8 | .343/8.7 | 20 |
| 9 | 995-7A | .1-118K | 1.233/31.3 | .343/8.7 | 20 |
| 11 | 995-10A | .1-187K | 1.796/45.6 | .343/8.7 | 20 |
| | | | | | |
| | | | | | |

**VITREOUS ENAMEL — Conformal — SERIES 22 — 5% Tolerance (1%-10% Available) — T.C. ±30 ppm/°C Typical**

| WATTS | Type | Res. Range | Maximum Length (″/mm) | Maximum Dia. (″/mm) | Leads 1.5″/38.1 mm Ga. |
|---|---|---|---|---|---|
| 1 | 221 | .1-2.5K | .406/10.3 | .156/4 | 22 |
| 2 | 222 | .1-3.9K | .406/10.3 | .219/5.6 | 20 |

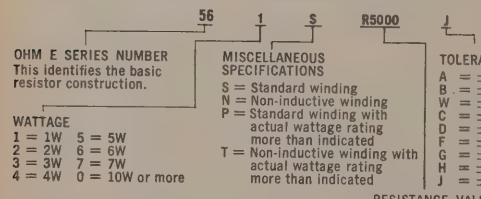
## HOW TO ORDER

**MOLDED** — For Series 88 and 99, specify style, resistance and tolerance.
**CONFORMAL** — Specify these Product Numbers:



Resistance value is identified by four digits and one letter.
Resistance is expressed in ohms with the letter "R" signifying a decimal point. "R" is used in all resistance values lower than 1000 ohms. The letter "K" indicates multiples of 1000 ohms.

This chart provides all basic data needed to specify the right axial lead wirewound resistor for your circuit application. Refer to application guide to select the proper resistor based on your key specifying parameters.

### VITREOUS ENAMEL

**Series 99**
Hi-Heat Dissipation
Molded Construction
MIL-R-26

**Series 99 & 22**
Severe Humidity Protection
Resistant to All Solvents
Industrial Applications

### FLAMEPROOF CERAMIC

**Series 57**
Flameproof
Severe Environments
Immune to Fungus Growth
High Overland Design

### SILICONE CERAMIC

**Series 88**
Molded Construction

**Series 56**
MIL-R-39007

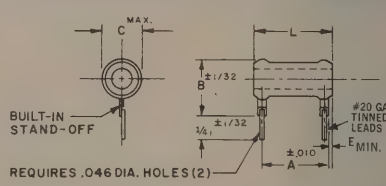
**Series 44, 88 & 56**
Low TC
Close Tolerance
High Heat Dissipation
Industrial Applications

**Series 88 & 56**
High Stability
Small Size/
High Heat Dissipation

Ohmite can supply resistors for applications requiring high reliability performance characteristics per MIL-R-39007.

- Meets MIL-R-26 Where Applicable
- Popular Values of Series 88, 99 and 44 Available from Stock
- Lead Taping Available
- Higher and Lower Resistance Values other Than Those Listed Above are Available. Consult Factory.

## RADIAL LEAD RESISTORS FOR P.C. BOARDS



**Resistance Element:** Resistance wire single layer wound on a tubular ceramic core and welded to lug bands.

**Terminals:** Radial, wire leads welded to lugs on centers to fit standard 0.1 inch matrix boards. Built-in standoff.

**Coating:** Vitreous enamel or Ohmicone (silicone-ceramic).

**Marking:** Ohmite code and resistance value (ohms) on top opposite leads.

**Tolerances:** Vitreous (Type 270) ±5%, 1 ohm and higher — ±10%, below 1 ohm. For closer tolerances, specify Type 474 (Ohmicone).

**Temperature Coefficient:** Less than 260 PPM/°C — Lower temperature coefficient available in Type 474 (Ohmicone).

| Rated Watts @ 25°C | Dimensions A ±.010 | B ±1/32 | C Max. | E Min. | L ±1/64 |
|---|---|---|---|---|---|
| 3 | .300 | .429 | 5/16 | 1/32 | 1/16 |
| 5¼ | .500 | .469 | 11/32 | 1/32 | 5/8 |

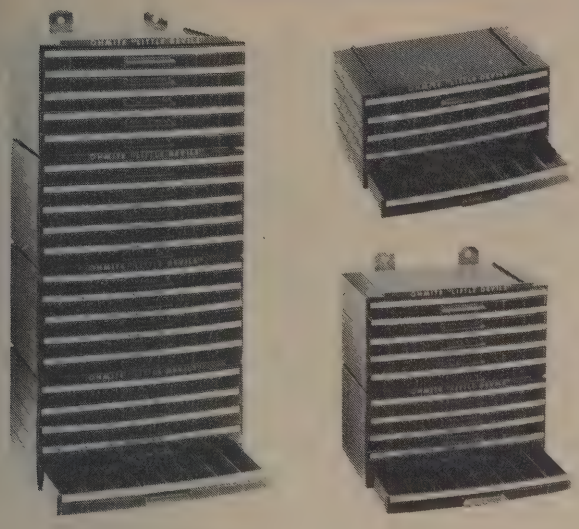
# OHMITE® cabinet assortments/ohm-ranger®

## Little Devil® industrial and service resistor assortments



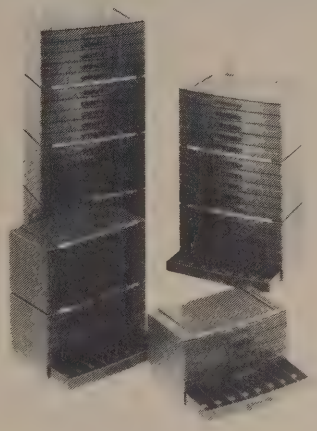
Select the composition resistor you need, right on the job from time-saving Little Devil® Assortments. Ohmite now offers **twelve industrial** assortments in addition to the four service assortments that have been so popular for many years. In this complete line, there is an assortment to fill every industrial and service need. An attractive plastic cabinet or cabinet assembly is furnished at no extra cost with each assortment. Each drawer of a single 5-drawer cabinet has eight compartments, all individually labeled. Dimensions of the single cabinet and 9″ long, 4¾″ high, 5¼″ deep. Dovetail tops and bottoms facilitate stacking. Cabinet assemblies for industrial assortments are riveted to metal strips which afford rigidity and permit hanging of the unit on the wall.

Cabinets are factory packed in accordance with the tables shown below.

### 12 ASSORTMENTS

| Type | Wattage | Cat. No. 1 | Tol. | Qty. | No. of Cabs | Resistance Range | No. of Values |
|---|---|---|---|---|---|---|---|
| LITTLE DEVILS CARBON COMP. | ⅛ | CAB-21 | 5% | 500 | 2 | 2.7Ω-22.0 Meg.Ω | 80 |
| | ⅛ | CAB-45 | 5% | 1000 | 4 | 2.7Ω-22.0 Meg.Ω | 160 |
| | ¼ | CAB-4 | 10% | 150 | 1 | 47Ω-10.0 Meg.Ω | 37 |
| | ¼ | CAB-25 | 10% | 1000 | 2 | 2.7Ω-22.0 Meg.Ω | 80 |
| | ¼ | CAB-46 | 5% | 1500 | 4 | 2.7Ω-22.0 Meg.Ω | 160 |
| | ½ | CAB-10 | 10% | 150 | 1 | 10Ω-10.0 Meg.Ω | 40 |
| | ½ | CAB-26 | 10% | 1000 | 2 | 2.7Ω-22.0 Meg.Ω | 80 |
| | ½ | CAB-47 | 5% | 1500 | 4 | 2.7Ω-22.0 Meg.Ω | 160 |
| | 1 | CAB-2 | 10% | 125 | 1 | 10Ω-10.0 Meg.Ω | 40 |
| | 1 | CAB-27 | 10% | 600 | 2 | 2.7Ω-22.0 Meg.Ω | 80 |
| | 1 | CAB-48 | 5% | 900 | 4 | 2.7Ω-22.0 Meg.Ω | 160 |
| | 2 | CAB-3 | 10% | 125 | 1 | 10Ω-10.0 Meg.Ω | 40 |

## Little Rebel® carbon and metal film resistor assortments



Always have the right resistor on hand and thwart Murphy's Law which states: "The resistance value needed will not be available." Ohmite Assortments of Little Rebel carbon film resistors come in Nine assortments and offer a wide selection of values in ⅛, ¼ and ½ watt sizes. "All values have been selected by popularity."

Ohmite Assortments of Metal Devil metal film resistors come in six assortments and offer a wide selection of values in ⅛ and ¼ watt sizes.

Each cabinet has five drawers and each drawer has eight compartments, all individually labeled.

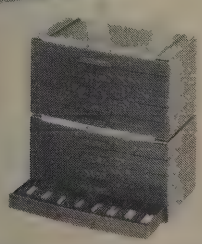
Dimensions of the single cabinet are 9″ long, 4¾″ high, 5¼″ deep. Dovetail tops and bottoms facilitate stacking. Assemblies of 2, 3 and 4 cabinets are riveted to metal strips for wall hanging.

### 15 ASSORTMENTS

| Type | Wattage | Cat. No. 1 | Tol. | Qty. | No. of Cabs | Resistance Range | No. of Values |
|---|---|---|---|---|---|---|---|
| LITTLE REBELS CARBON FILM | ⅛ | CAB-5F | 5% | 150 | 1 | 10Ω-.22 Meg.Ω | 31 |
| | ⅛ | CAB-22F | 5% | 500 | 2 | 10Ω-.22 Meg.Ω | 52 |
| | ⅛ | CAB-34F | 5% | 1000 | 3 | 10Ω-.22 Meg.Ω | 103 |
| | ¼ | CAB-6F | 5% | 150 | 1 | 1Ω-1.0 Meg.Ω | 36 |
| | ¼ | CAB-23F | 5% | 1000 | 2 | 1Ω-1.0 Meg.Ω | 75 |
| | ¼ | CAB-43F | 5% | 1500 | 4 | 1Ω-1.0 Meg.Ω | 136 |
| | ½ | CAB-7F | 5% | 150 | 1 | 1Ω-1.0 Meg.Ω | 36 |
| | ½ | CAB-24F | 5% | 1000 | 2 | 1Ω-1.0 Meg.Ω | 75 |
| | ½ | CAB-44F | 5% | 1500 | 4 | 1Ω-1.0 Meg.Ω | 136 |
| METAL DEVILS METAL FILM | ⅛ | CAB-8M | 1% | 250 | 1 | 10Ω-301KΩ | 40 |
| | ⅛ | CAB-28M | 1% | 500 | 2 | 10Ω-301KΩ | 80 |
| | ⅛ | CAB-31M | 1% | 1000 | 3 | 10Ω-301KΩ | 120 |
| | ¼ | CAB-9M | 1% | 250 | 1 | 10Ω-1.0 Meg.Ω | 40 |
| | ¼ | CAB-29M | 1% | 500 | 2 | 10Ω-1.0 Meg.Ω | 80 |
| | ¼ | CAB-32M | 1% | 1000 | 3 | 10Ω-1.0 Meg.Ω | 120 |

## resistor assortment

wire-wound/ axial lead molded vitreous enamel



Select the wire-wound resistor you need, right on the job. All the popular resistance values, as determined by national usage, are contained in these handy, compact assortments.

The attractive plastic cabinet is furnished at no extra cost with each assortment. Cabinets are factory packed in accordance with the table (shown below) which states the quantities of each resistance value per assortment. Each drawer segment is individually labeled. Dovetail tops and bottoms of cabinets facilitate stacking. Dimensions for single cabinets are 9″ long x 4¾″ high x 5¼″ deep; double cabinets are 10″ high, including wall hanging brackets.

- **Perfect for R & D and Prototype Labs.**
- **All popular values included.**
- **Resistors and handy cabinet for the price of the resistors alone.**
- **4 Wattage sizes to choose from.**
- **Contents clearly marked on front of each drawer segment.**

### SPECIFICATIONS

| Nominal Wattage Size | Catalog Number | No. of Res. Values | Quantity of Resistors |
|---|---|---|---|
| 1½ W. | CAB-91 | 40 | 167 |
| 3½ W. | CAB-93 | 71 | 325 |
| 5 W. | CAB-95 | 75 | 355 |
| 11 W. | CAB-99 | 40 | 185 |

## OHM-RANGER®

**economical, portable resistance selector**

- **Over 11 million ohms in one-ohm increments**
- **1% accuracy***
- **Easy slide switch operation**
- **Handy slimline size**
- **Rugged metal construction**

Catalog No. 3420

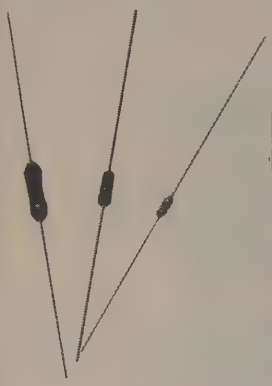
1 to 11,111,110 ohms, in one-ohm steps — with accuracy assured by half-watt 1% tolerance resistors! Has three binding posts, one to ground case. Small enough to take anywhere in your pocket, the handy easy-to-use OHM-RANGER is ideal for lab use, schools and service technicians. Dimensions 4″ x 6″ x 1″.

*10 ohms and above.

# Panasonic®

## FIXED RESISTORS

### TYPE ERD (⅛, ¼ & ½ W) CARBON FILM



Panasonic has been producing the most reliable carbon film resistors for 45 years. This background, plus 20 years of modern mass producing experience in producing conventional standard types, has led to these new miniature standard carbon film resistors — which are unequalled for reliability and performance characteristics.

- Small size
- High stability
- High reliability
- Low noise
- Low temp. coefficient
- 1%, 2%, 5% tolerance

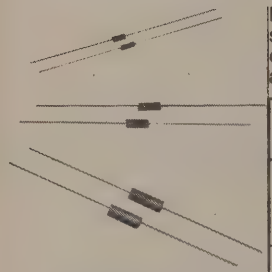
### TYPE ERC (⅛, ¼ & ½ W) CARBON COMPOSITION



Panasonic has been producing carbon composition resistors for over 26 years. Our carbon composition types are now being produced by a hot-molding process on automatic machines recently developed and used only by Panasonic. These resistors, when used as specified, will not open-circuit nor exhibit erratic changes in value.

- Full range of standard values — from 2.2 ohms to 22 megohms
- Special high values on request
- High reliability
- Rugged construction
- Uniform quality

| Type No. | Power Rating (W) @ 70°C | Max. RCWV (Note 1) | Max. Overload Voltage | Dielectric Withstanding Voltage | Res. Tol. (%) | Resistance Range (Ω) Min. | Resistance Range (Ω) Max. | Std. Res. **Note 1:** Rated Continuous Working Voltage (RCWV) shall be determined from RCWV = √ Rated Power x Resistance Value, or Max. RCWV listed above, whichever less.

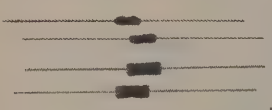
### TYPE ERO (¼ & ½ W) METAL FILM



With over 16 years of experience in mass producing metal film resistive elements and over 2 billion hours of component use, Panasonic has been able to lead the way in producing the new, small-size, standard metal film resistors essential for meeting MIL specs.

- Standard tolerance: 1%
- Temperature coefficient of 100 ppm (CKF Series) and 50 ppm (CHF Series)
- Meet standards of MIL-R-10509 (RN-60 and RN-65)
- Excellent humidity characteristics
- Solvent proof coating

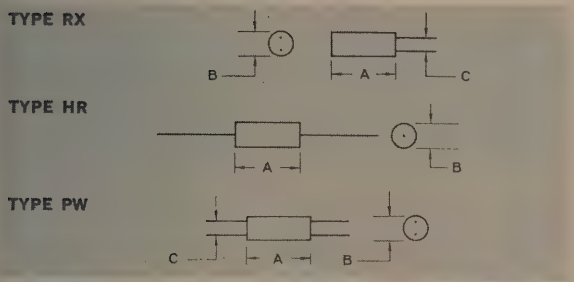
# PRINTED CIRCUIT TYPE RX
# AXIAL LEAD TYPE HR
# 4-TERMINAL TYPE PW

# ULTRA HIGH PRECISION WIREWOUND RESISTORS



## DESCRIPTION AND APPLICATION:

**PRECISION'S** premier performance resistors represent nearly fifty years of specialization in the exclusive design and manufacture of precision resistance units. These ultra-high accuracy, ultra-time stability, low noise resistors are excellent for matched tolerances and TCR characteristics, as well as economical single or multiple secondary standards for critical commercial and military applications.

† 2″ leads on MIL-Styles

## ENGINEERING DATA:

### 1 RESISTANCE RANGE AND TOLERANCE

**Standard:** Any ohmic value or decimal part of an ohm desired with tolerances to ±0.01%.

**Special:** Higher or lower values beyond the standard limits with tolerances to ±0.005%. (Allow approx. +.001 ohm/inch for lead resistance on low value two-terminal designs. Lead resistance adder may be eliminated by using a four-terminal configuration).

### 2 TEMPERATURE COEFFICIENT OF RESISTANCE (TCR)

**Standard:** Zero ±5 ppm/°C (100 ohms and above). Zero ±15 ppm/°C (values below 100 ohms).

**Special:** To ±1 ppm/°C. TCR matching to within 0.5 ppm/°C.

### 3 INDUCTANCE

**Standard:** Non-inductively wound with balanced reverse-pi winding.

### 4 STABILITY VS. TIME CHARACTERISTICS (No Load)

To ±0.001%/year at 25°C.

### 5 POWER RATINGS VS. AMBIENT TEMPERATURE

These resistors are designed for full load operation providing the ambient temperature plus the temperature rise due to power dissipation does not exceed +125°C. (Derated to zero power at +145°C.)

### 6 VOLTAGE RATINGS (D.C. Voltage or Peak Voltage)

To calculate the safe operating voltage for any resistance value below the maximum listed, apply the formula $E = \sqrt{PR}$.

### 7 THERMAL EMF (With respect to copper)

< +2 microvolts per °C (100 ohms and above). < −3 microvolts per °C (values below 100 ohms).

### 8 PROTECTIVE ENCAPSULATION

Hermetic - Epoxy - Seal.

### 9 MARKING (Identification)

**Standard:** PRC symbol, type, resistance value and tolerance.

**Special:** Military or custom marking.

### 10 SPECIAL TESTS

**Qualification testing:** Per MIL-Std-202 on a 100% or sample basis available.

# HIGH PRECISION WIREWOUND RESISTORS

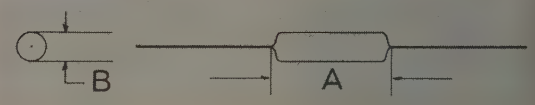
## TYPE SX (SILICONE PROTECTION)
## TYPE TX (ECONOMY LINE)

### DESCRIPTION AND APPLICATION:

**PRECISION** continues a tradition in wirewound resistors with . . .

- **BEST-SELLING HIGH PRECISION TYPE SX:** Silicone conformal coated types in any resistance value as well as higher or lower values and TCR characteristics beyond the MIL limits.
- **LOW-PRICED/SPACE-SAVER TYPE TX:** Hundreds of combinations and physical sizes for commercial/industrial applications in any ohmic value desired.

TYPE SX/TYPE TX



### FEATURES:

- Ideal for module designs
- Standard (Low) TCR char.
- Excellent long-term stability
- Wide selection to meet needs exactly
- Comply with MIL-Standards
- Competitively priced

# TYPE SX / TYPE TX HIGH PRECISION WIREWOUND RESISTORS

## ENGINEERING DATA:

### 1 RESISTANCE RANGE

**Standard:** Any specified ohmic value desired or decimal part of an ohm thereof.

**Special:** Higher or lower values beyond the standard limits.

### 2 RESISTANCE TOLERANCE

All calibrations and final measurements are made with temperature corrections to +25°C, unless otherwise specified.

| Military Symbol | Resistance Tolerance |
|---|---|
| A | ±0.05% |
| B | ±0.1% |
| C | ±0.25% |
| D | ±0.5% |
| F | ±1% |
| G | ±2% |
| H | ±3% |
| J | ±5% |
| Rough wound (one end terminated only) | +5% |

### 3 TEMPERATURE COEFFICIENT OF RESISTANCE (TCR)

**Standard:** Zero ±5 ppm/°C to Zero ±20 ppm/°C.

**Special:** To ±1 ppm/°C (±0.000001 ohm/ohm/°C).

### 4 INDUCTANCE

**Standard:** All high precision resistors are inductive wirewound resistors for DC circuits.

**Special:** High precision resistors with suffix letter "N" are non-inductively wound with balanced reversed turns to minimize the inductance and coupling effect with other components in critical or high density circuit designs.

### 5 STABILITY VS. TIME CHARACTERISTICS (No Load)

**Initial Resistance vs. Long Term Stability**

**Standard:** < ±0.01%/year at 25°C.

**Special:** < ±0.005%/year at 25°C.

### 6 POWER RATINGS VS. AMBIENT TEMPERATURE

All TYPE SX and TYPE TX resistors are designed for continuous full load operation providing the total operating temperature (the ambient temperature plus the temperature rise due to power dissipation) does not exceed:

+125°C (Char. C) TYPE SX.
+ 85°C (Char. A) TYPE TX.
See Derating Curve, Figure #1.

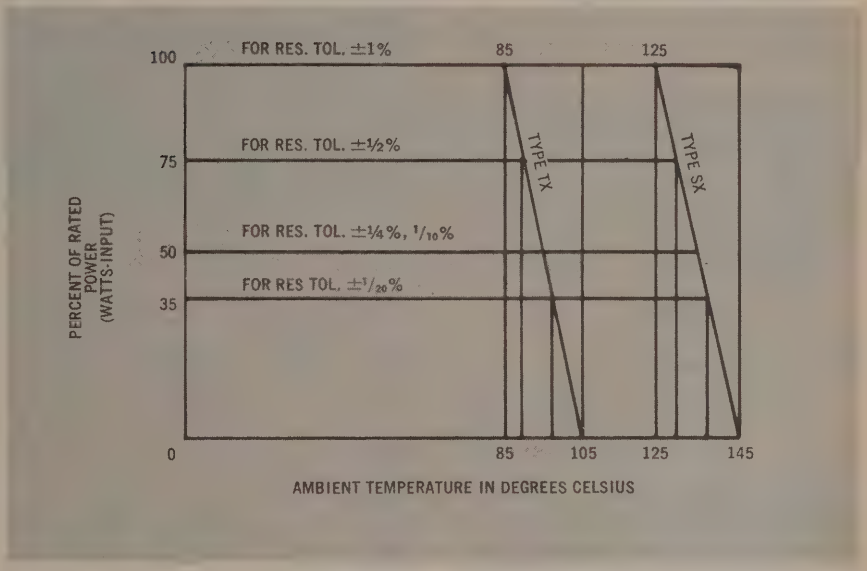

FIGURE #1 DERATING CURVE

### 7 POWER RATINGS VS. RESISTANCE TOLERANCE

Power ratings are based upon standard ±1% resistance tolerance. For closer tolerances refer to Derating Curve, Figure #1.

### 8 VOLTAGE RATINGS (D.C. Voltage or Peak Voltage)

To calculate the safe operating voltage for any resistance value below the maximum listed, apply the formula $E = \sqrt{PR}$.

### 9 TERMINALS

**Standard:** Solderable hot-tinned copper wire leads.

**Special:** Weldable leads available upon request.

### 10 PROTECTIVE COATINGS

**TYPE SX:** All TYPE SX resistors are encapsulated in a new solvent resistant silicone-epoxy-seal assuring excellent stability under severe environmental conditions — MIL-R-93 and MIL-R-39005.

**TYPE TX:** All TYPE TX resistors are sealed in a commercial plastic conformal coating assuring maximum protection against the effects of moisture.

### 11 MARKING

PRC symbol, type, resistance value and tolerance.

### 12 PURCHASING INFORMATION

When ordering high precision resistors, please specify: Quantity, Type, Resistance Value, Resistance Tolerance and Special Features which may apply.

PRC PRECISION RESISTOR CO., INC.

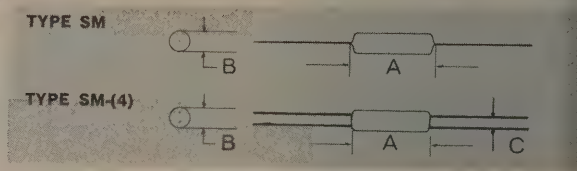
# PRECISION POWER WIREWOUND RESISTORS

## TYPE SM AXIAL LEAD
## TYPE SM-(4) FOUR TERMINAL

### DESCRIPTION AND APPLICATION:

**PRECISION'S TYPE SM** sub-miniature precision power wirewound resistors are available in two and four terminal designs for commercial and military applications.



### ENGINEERING DATA:

**1 RESISTANCE RANGE**
Any ohmic value or decimal part of an ohm within range listed.

**2 RESISTANCE TOLERANCE**
**Standard:** ±1% (other tolerances available to ±0.05%).

**3 TEMPERATURE COEFFICIENT OF RESISTANCE (TCR)**
**Standard:** Zero ±5 ppm/°C to Zero ±20 ppm/°C.
**Special:** To ±2 ppm/°C.

**4 INDUCTANCE**
The basic TYPE SM resistors are inductively wound. Non-inductive resistors are available—add suffix letter "N" in part number.

**5 VOLTAGE RATINGS (D.C. Voltage or Peak Voltage)**
To calculate the safe operating voltage for any resistance value below the maximum listed, apply the formula $E = \sqrt{PR}$.

**6 POWER RATINGS**
All standard 1% tolerance TYPE SM resistors are designed for continuous full load operation at 25°C. Derate to zero power at +275°C.

**7 PROTECTIVE COATING**
All TYPE SM resistors are sealed in a tough solvent resistant — high temperature silicone coating.

**8 MARKING**
PRC symbol, type, ohmic value and tolerance or military and custom identification.

**9 FOUR TERMINAL DESIGN**
The four (4) terminal shunt/resistors are specifically designed and constructed for applications requiring precise measurement and sensing of current by the voltage drop methods or for use as precision voltage divider networks.

### ELECTRICAL AND PHYSICAL SPECIFICATIONS

#### TYPE SM

For higher resistance values (at max. rated voltage) decrease max. power rating ($P=E^2/R$)
For lower resistance values (at max. rated power) decrease max. voltage rating ($E=\sqrt{PR}$)

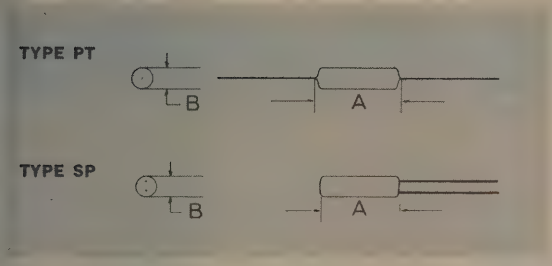
# AXIAL LEAD TYPE PT
# PROBE DESIGN TYPE SP

# SPECIAL POSITIVE (+) TEMPERATURE COEFFICIENT WIREWOUND RESISTORS



## DESCRIPTION AND APPLICATION:

**PRECISION'S** linear (+) TCR thermal tracking resistors function as economical temperature sensing devices in bridge circuit applications for process control systems. These axial lead or probe design resistors are also used as compensators for voltage stabilization of components with negative (−) TCR drift.

## ELECTRICAL AND PHYSICAL SPECIFICATIONS

| PRC Types | | | Body Dimensions | | Lead Diam. Tinned Copper | Min. Res. (Ohms) | Maximum Resistance Values for Partial Listing of Popular +(TCR) Characteristics* | | | | | | |

* ΔR/°C = TCR x Ro (Above or below 25°C). Maximum Resistance values based upon .001" wire size.

## ENGINEERING DATA:

### 1 RESISTANCE RANGE AND TOLERANCE

**Standard:** 1 ohm through 50 Kilohms (±1% Tol.).

**Special:** 0.1 ohm through 300 Kilohms (to ±0.1% Tol.).

### 2 TEMPERATURE COEFFICIENT OF RESISTANCE (TCR)

The TCR characteristic is the change in resistance above or below the reference temperature (25°C).

Use formula:

$$TCR\,(\%) = \frac{\Delta R \times 100}{Ro \times \Delta t}$$

where:

Ro = Original resistance at reference temperature.

ΔR = Change in resistance at test temperature from resistance at reference temperature.

Δt = Difference between test and reference temperature in degrees.

**Standard:** +20 ppm/°C through +6000 ppm/°C. (See partial listing of popular TCR char. above.)

**Special:** Any non-standard (+) TCR with either available alloys or composite windings.

### 3 TOLERANCE ON (+) TCR

**Standard:** ±5% and ±10%.

**Special:** To ±1% or less. TCR matching < ±1% in a given lot.

### 4 STABILITY VS. TIME CHARACTERISTICS (No Load)

**Standard:** ±0.05%/year at 25°C.

**Special:** < ±0.01%/year at 25°C.

### 5 ZERO POWER RESISTANCE VS. EXTERNAL TEMPERATURE

Linear output < ±0.5% of the measured temperature over a wide measuring span (25 to 150°C) as well as smaller temperature changes for small spans (< 10°C).

### 6 THERMAL TIME CONSTANT

Time required for device to indicate 63.2% of a new impressed temperature - e.g. step change from +25°C to +100°C at 3FPS velocity to < 0.5 second.

### 7 WATTS - INPUT VS. AMBIENT TEMPERATURE

**Standard:** Devices listed are designed for continuous full load compensator applications at any ambient temperature up to and including +125°C (derated to zero power at +150°C).

**Special:** Hundreds of additional physical sizes and TCR combinations are available.

### 8 PROTECTIVE COATINGS

**Standard:** Conformal silicone/epoxy seal.

**Special:** Thermal conductive insulating coatings, uncoated or encapsulated into a metal sheath to meet needs exactly.

### 9 MARKING

PRC symbol, type, resistance value and tolerance. TCR char. — physical size permitting.

Standard Tolerance ±2% (<100Ω ±.5Ω)

### STANDARD PRODUCT SPECIFICATIONS

Resistance Range ..... 10 ohms to 1 meg ohm

Tolerance ..... Letter designation for ordering
- Standard 2% ..... G
- Special 5% ..... J
- Special 1% ..... F
- Special .5% ..... D

Max. number of resistors per Dip available ..... 28

Power Rating ..... 1.75W Total per DIP at 70°C
Max. power per resistor .125W for standard circuits

Temperature Coefficient Track .... Typical 50 PPM/°C
Special 25 PPM/°C

Temperature Coefficient of resistance ..... Letter designation for ordering
- Standard — 0 ± 300PPM/°C ..... M
- Special — 0 ± 200PPM/°C ..... L
- Special — 0 ± 100PPM/°C ..... K

Tolerance Ratio Match ..... As low as .5%

Voltage Ratings ..... 100 V max. per resistor, 2000 V max. per DIP package for special circuits

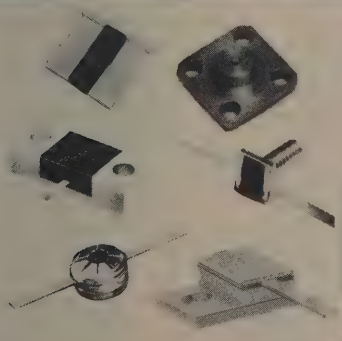
Operating Temperature Range ..... −55°C to +125°C

Encapsulation ..... epoxy transfer molded

### ORDERING INFORMATION

| Basic Model Number | Number of Pins | Temp. Coeff. | Resistance Value | Tolerance | Schematic |
|---|---|---|---|---|---|
| PD | 16 | M | 220Ω | G | A |

## RF COMPONENTS



- ATTENUATORS 2-20DB UP TO 50 WATTS
- TERMINATIONS, RESISTORS, & CAPACITORS UP TO 20 WATTS
- COAXIAL CONDUCTION COOLED LOADS UP TO 200 WATTS
- HIGH POWERED CHIP RESISTORS UP TO 1000 WATTS
- FLANGE MOUNTED TERMINATIONS & RESISTORS UP TO 800 WATTS

**Pyrofilm Also Makes . . .**
- Custom designed microwave and stripline components
- Thin film low power chips • Rods, discs and T pads
- High power rods, disc, and T pads

# RCL Electronics

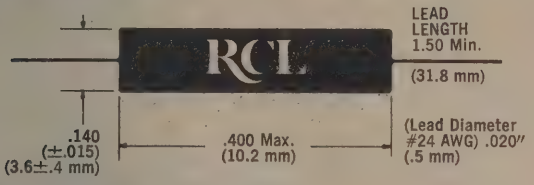
## *precision wire-wound fuse resistors*

**NOW . . . a dual-purpose device that performs the functions of acting both as a precision wirewound resistor and a fuse. Precisely controlled characteristics . . . stable accurate resistance . . . allows precise control of fusing point and time lag.**



**GENERAL SPECIFICATIONS ON 500 SERIES**

**Resistance Range:** 0.2Ω-200Ω
**Resistance Tolerance:** 10%, Std, 5% and 2% available
**Blow Characteristics:** Consult factory
**Steady-State Conditions:** Consult factory
**Operating Temperature:** −55°C to +150°C
**Temperature Coefficient:** ±50 PPM/°C Max

**CONSTRUCTION FEATURES**

- Single Fusing Element — All Welded Connections
- Ceramic Shell — Air Encapsulation
- Meets or Exceeds MIL-R-26 Environmental Conditions-Specifications
- Intrinsically Safe — Ceramic Bobbin — Single Layer Wound

RCL designs and manufactures standard (F500 series) and special fuse-resistors to customer requirements. The fuse resistor acts both as a precision wirewound resistor and as a fusing element with precisely controlled characteristics.

- Affords protection for semiconductor devices
- Reduces the number of discrete components required
- Eliminates fire hazard and circuit board damage due to overheated components

**SPECIFICATION DEVELOPMENT**

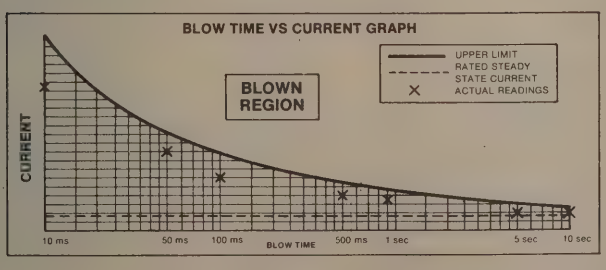
Because of the sometimes difficult task of determining the exact circuit conditions, it is often necessary to make refinements to the basic fuse resistor design after evaluating the operation in the circuit. The following general procedure has proven successful on past designs:

- Customer supplies detail requirements
- RCL engineering review and quotation
- Engineering prototypes are supplied
- Customer evaluates prototypes in circuit
- Specification refinements (if necessary) are made

**SPECIFICATION PROCEDURES**

When establishing a fuse resistor design, it is desirable to know the following:

- Normal operating current
- Desired total resistance and tolerance
- Current versus blowtime required (1 point definition minimum — 2 or more preferred)
- Operating temperature limits
- Description of transients — magnitude, duration, repetition
- Physical requirements — size and weight
- Normal ambient temperature
- Special environmental requirements



## *RCL wire-wound printed circuit resistors*

△ All welded construction.

△ All resistor wire terminations are made at the top of the resistor rather than at the bottom. This does the following:

a. protects the joints from damage when submerged in a solder bath.
b. by placing these joints as far away as possible from the solder bath, the body acts as a heat sink and thus these terminations are given additional protection.
c. this design generally applies to values of 2K and above.

△ Custom designs on special order.

△ Different lead spacing can be furnished on request.

△ Non-inductive winding available.

Lead Length 1¼" Minimum. Tinned, weldable leads.

## *special temperature coefficient wire wound resistors*

- Applications include transistor circuits, zener diode temperature compensation, temperature measuring devices.
- Available in a range of temperature coefficients from −50 PPM/°C. to +6,000 PPM/°C.
- Values range from 10 ohms to 5 megohms.
- All available with axial or printed circuit leads.
- Available in all physical sizes.
- All meet applicable paragraphs of Mil-R-93D.

| R2408-ER | RBR 81 | .160 | .500 | .1 | 100 | 250K | .400 ±.005 | 4.06 | 12.70 |

**Lead Length:** 1.0" min. **Lead Diameter:** #22 AWG for 4060-ER — #20 AWG for R2407-ER and R-2408-ER.
**Standard Temperature Coefficient:** ±20 PPM/°C.

## POWER RESISTORS / PER MIL R-39007

**Resistance Tolerances Available:** .1%, .5%, 1.0%.
**Lead Length:** 1½" minimum.
**Standard Coefficient:** ±20 PPM/°C.
**Non Inductive Winding:** Add Suffix N. (divide maximum resistance values by 2)
If solderable leads are required use Suffix S.
If weldable leads are required use Suffix W.

A completely controlled process is used for the manufacture of established reliability units. Every unit is documented and traceable with quality control data. A 100 hour burn-in at rated wattage is performed. Failure rates test results are available.

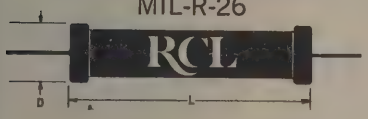
# RCL Electronics
# SERIES T
# silicone coated axial power wire-wound resistors

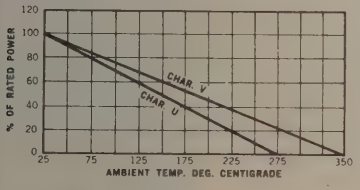
*General Specifications Available:*

- ☐ **Standard Temperature Coefficient:**
  Standard T.C.:
  ±20 PPM/°C. 500Ω up ±30 PPM/°C 10Ω to 499Ω
  ±50 PPM/°C 1Ω to 9.9Ω ±90 PPM/°C below 1Ω
  Lower ohmic values require higher T.C.'s, consult factory for information on specific applications.
  Consult factory for lower temperature coefficient requirements.
- ☐ **Tolerance:** ±1.0% is standard. Closer tolerances available. Closer tolerances may necessitate lowering maximum resistance; consult factory for specifics.
- ☐ **Wattage Range:** ½ watts to 14 watts.
- ☐ **Standard Resistance Values:** From 0.1 ohms to maximum values as stated in table. For values below 0.1 ohms consult factory.
- ☐ **Coating:** RCL's proprietary silicone coating withstands moisture, salt water immersion, and cleansing solutions. It will withstand continuous operation up to 400°C.
- ☐ **Leads:** Tinned copperweld is standard.
- ☐ **Dielectric Strength:** 500 VAC for T-½A through T-1C, 1000 VAC for all others.
- ☐ **Insulation Resistance:** 5000 Megohms minimum at 100 volts D.C.
- ☐ **Wide Temperature Range:** From −65°C to +275°C (Characteristic U) or +350° (Characteristic V).

MILITARY GRADE
MEETS OR EXCEEDS
MIL-R-26



**POWER RATINGS:**
The RCL "T" Series has two power ratings, depending on operating temperature and stability requirements:
**CHARACTERISTIC U:** 275°C maximum hot-spot temperature.
**CHARACTERISTIC V:** 350°C maximum hot-spot temperature.
**DERATING:**
RCL Series "T" resistors have an operating temperature range of −65°C to +275°C (Characteristic U), or to +350°C (Characteristic V).



**Ultra-fast delivery for prototypes and initial production needs.**

Lead length 1¼" (32mm) Minimum.

**NON-INDUCTIVE WINDING AVAILABLE FOR SERIES "T" OR "B"**

- ☐ For non-inductive winding add prefix "N".
1. Divide maximum resistance values by two.
2. Multiply maximum working voltage by .707.
3. Where possible, specify maximum inductance or capacitance allowable at a specific frequency.

## FEATURES

- Molded and welded construction
- Screw mounts on chassis
- Exceptionally high stability at all conventional power ratings
- Utilizes heat-sink effect of chassis
- Clearly marked on top surface of housing for ease of identification after mounting
- Exceeds MIL-R-18546
- Complete protection against environment

**NON INDUCTIVE STYLES: (Series "AL" and "ALB")** The same physical and electrical specifications are available with non-inductive winding. They are identified by adding the letter N after the AL identification.

| RCL TYPE | MIL-R-18546 TYPE | POWER RATING* (WATTS) RCL | POWER RATING* (WATTS) MIL | RESISTANCE RANGES (OHMS) | MAX. WORKING VOLTAGE | MAX. WT. GRAMS |

| AL-50 | RE-75G | 50 | 30 | .01 to 273K | 1250 | 29 |

* Rating based on chassis mounting.

## MATERIAL

**Core:** Steatite, or Alumina Ceramic.
**Resistance Wire:** Nichrome wire (800Ω/CMF) is standard; other alloys used when required.
**End Caps:** Stainless steel.
**Sealant:** Molded construction.
**Housing:** Anodized Aluminum.
**Terminals:** Tinned copperweld.
**Flame Retardant Construction:** Available on special order.

### BERYLLIUM OXIDE CORES FOR GREATER HEAT DISSIPATION

| RCL TYPE | MIL-R-18546 TYPE | POWER RATING* (WATTS) RCL | POWER RATING* (WATTS) MIL | RESISTANCE RANGES (OHMS) | MAX. WORKING VOLTAGE | MAX. WT. GRAMS |
|---|---|---|---|---|---|---|

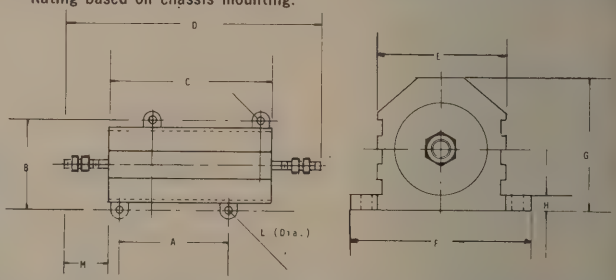
| ALB-50 | RE-75 | 50 | 30 | .01 to 273k | 1400 | 29 |

* Rating based on chassis mounting.

## POWER RATING

Both AL-100 and AL-250 Series ratings based on the following requirements:

**A.** 275°C maximum internal hotspot temperature.
**B.** 1% maximum △R in 1000 hour load life.
**C.** Proper heat sink: 12" x 12" x .125 Aluminum Panel.
**D. Derating:**
1. Operating temperature range of −55°C to +275°C.
2. Derating is required for reduced chassis mounting area and for high ambient temperatures.



## ELECTRICAL SPECIFICATIONS

**Tolerance:** ±1.0% is standard. Available to ±.05%. Closer tolerances may necessitate lowering maximum resistance. Consult RCL for specifics.

**Standard T.C.:**
±20 PPM/°C. 500Ω up
±30 PPM/°C. 10Ω to 499Ω
±50 PPM/°C 1Ω to 9.9Ω
±90 PPM/°C. below 1Ω

Lower ohmic values require higher T.C.'s. Consult factory for information on specific applications.

**Dielectric Strength:** 5500 VAC on AL-100 and AL-250.

**Insulation Resistance:** 10,000 megohms minimum dry.

# RCL Electronics

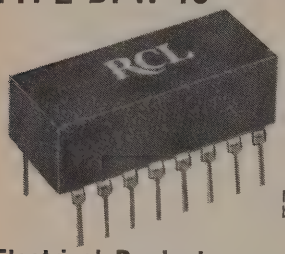
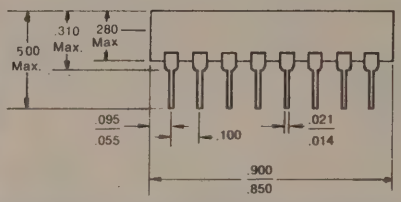
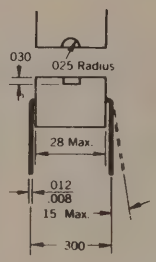
# *wire-wound networks (dual-in line package)*

## TYPE DPW 16



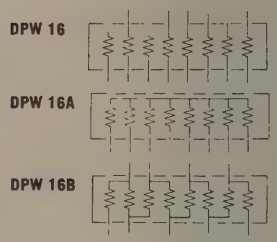




Note: Dimensions shown are typical for this type package but are flexible to meet specific customer requirements.

- Designed for automatic insertion
- Up to 8 resistors in a 16-pin package
- Optimum heat dissipation in small package
- High temperature stability
- Precision tolerance and T.C.

### TYPICAL SCHEMATICS



### Electrical Products

**Power Rating:** 4 watts (up to ½ watt/resistor)

**Resistance Range:** .05 ohm to 100K resistor

**Temperature Coefficient Match:** 10 PPM/°C Standard — Available to 2.5 PPM/°C

**Tolerance:** 1% Standard Available to .05%

**Temperature Coefficient:** 10 Ω to 10K Ω ±20 PPM/°C — .5 Ω to 9.9 Ω ±50 PPM/°C

**Tolerance Match:** .05%

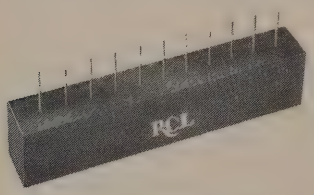
**Dielectric Strength:** 500 VAC

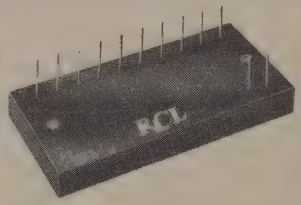
**Insulation Resistance:** 1000 Megohms minimum. 100 Megohms minimum after moisture test.

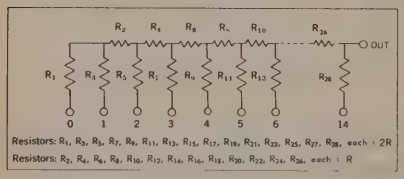
Also available in 14 pin standard DIP configuration (Up to 7 resistors). Specify DPW 14, DPW 14A, DPW 14B.

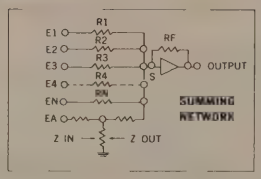
# *ladder and summing networks*

### RCL makes available ladder networks in both standard and miniaturized versions







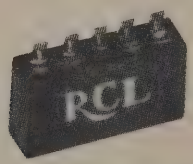


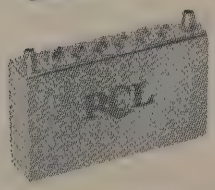
- Maximum total error less than ½ of the smallest word input combinations
- Modular construction
- Interchangeable sub-assemblies

### General Specifications Available:

- Ambient operating temperature range . . . −55° to +125°C
- Error . . . Under .50 of the least insignificant bit for every input combination
- Resistance Values . . . .05 ohms to 100K
- Output accuracy to ±.01% and ±2 PPM/°C
- Up to 14 bits available
- Wire Wound precision resistors of matched characteristics result in stability

# *precision resistance networks*





RCL designs, develops and produces packaged resistance networks to individual customer requirements.

A high degree of sophisticated packaging plus miniaturization techniques are available from RCL's network engineering specialists. Typical custom designed networks are shown here.

### General Specifications Available:

- Absolute resistor tolerances to ±.005%
- Ratio tolerances to ±.003%
- Temperature coefficient match and tracking between resistors within ±1 PPM°, from −0°C to +85°C
- Long term stability of .003% the first year and .005% over a three year period
- Low reactance and rise times as low as .02 microseconds
- AC resistance match at frequency determined by user.
- In AC converter networks, capacitance can be matched to 0.01 MMFD with a shielded network

**If you have a network problem, send us your complete specifications for a prompt and detailed proposal.**

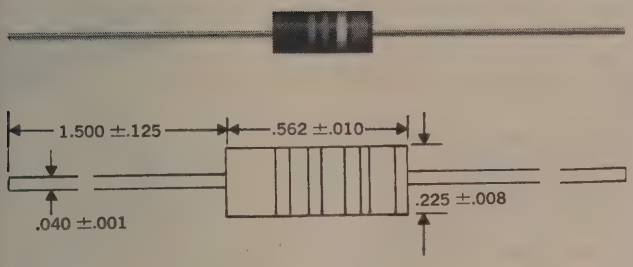
## RCL Electronics

# *low cost 2 watt molded wire-wound resistors*

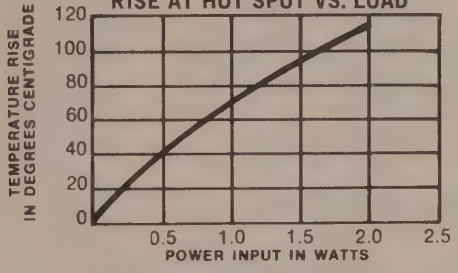
## TYPE BWR



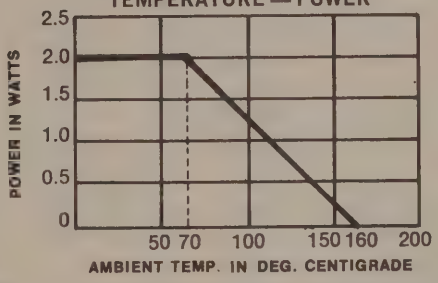
A general purpose, extremely economical wire wound resistor. Type BWR covers three different wattage requirements in one size resistor.

BWR resistors offer wire wound stability, negligible noise and no catastrophic failures for 2, 1 and ½ watt applications. Significant cost savings may be obtained over Fixed Compositions Resistors in the categories of 1 watt 5% tolerance, 2 watt 5% and 10% tolerances.

**SURFACE TEMPERATURE RISE AT HOT SPOT VS. LOAD**



**DERATING CURVE TEMPERATURE — POWER**



| PERFORMANCE CHARACTERISTICS | |
|---|---|
| **REQUIREMENT** | **MAXIMUM BWR △R** |
| Temperature Coefficient | |
| 0.1Ω - 0.16Ω | +0.1%/°C |
| 0.10Ω - 0.62Ω | +0.08%/°C |
| 0.68Ω - 1000Ω | ±0.04%/°C |
| Low Temperature Operation | ±3% |
| Temperature Cycling (−55°C to +125°C) | ±5% |
| Moisture Resistance | ±5% |
| Short Time Overload (8 watts) | ±4% |
| Load Life | ±10% |
| Terminal Strength | ±2% |
| Resistance to Soldering Heat | ±4% |
| Shock | ±2% |
| High Frequency Vibration | ±2% |

### PERFORMANCE CHARACTERISTICS

Type BWR resistors meet or exceed performance requirements of EIA RS-344.

### SPECIFICATIONS

| | |
|---|---|
| **MIL-R-11 Style Equivalent for physical size only** | RC32 |

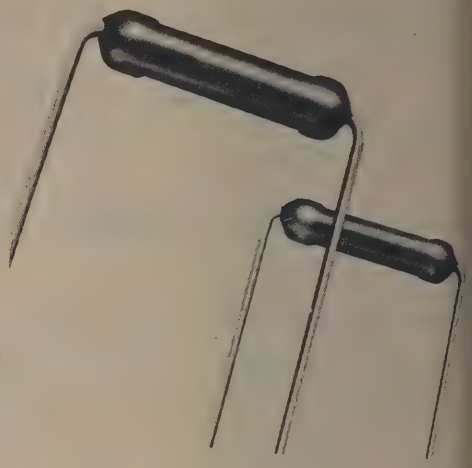
# *silicone coated power resistors*

## *radial lead* TYPE TR



### SPECIFICALLY DESIGNED FOR PRINTED CIRCUIT BOARD MOUNTING

- Complete welded construction.
- Meets requirements of MIL-R-26.

### General Specifications Available:

**Standard T.C.:** ±20PPM/°C. 500 Ω up
±30PPM/°C. 10 Ω to 499 Ω
±50PPM/°C. 1 Ω to 9.9 Ω
±90PPM/°C. 0.1 Ω to 1 Ω

Lower ohmic values require higher T.C.'s; consult factory for information on specific applications, and for lower temperature coefficient requirements.

**Tolerance:** ±1.0% is standard. Closer tolerances are available. Consult RCL for specifics.

**Wattage Range:** ½ watt to 18 watts.

**Resistance Values:** From .01 ohms to 275K.

**Coating:** Silicone coating impervious to moisture, salt, water immersion and abrasion.

**Leads:** Tinned copperweld is standard.

**Dielectric Strength:** 1000 VAC "V" block test.

**Insulation Resistance:** 5000 Megohms minimum dry 100 volts D.C.

**Wide Temperature Range:** From −65°C to +275°C.

**Flame Resistant Construction:** Available on special order.

**Special Low Resistance Values:** Available to .001 ohms. For values below .01 ohms consult factory for practical tolerances.

### SERIES TR — RADIAL LEAD NON-INDUCTIVE STYLES — SERIES BR

a) For Standard Core, Radial Lead Non-inductive Resistors may be specified by using suffix "N" (for example: TR-N-5).

b) For Beryllia or Beryllium Oxide Core, Radial lead Non-inductive Resistors may be specified by using suffix "N" (for example: BR-N-5). Maximum resistance for both non-inductive styles is ½ of that indicated in tables.

RCL Electronics

# special products

RCL engineers have designed and produced thousands of unique products to meet special customer applications. Shown are a few typical examples. RCL has an application engineering group directed toward solving and producing unusual products to fit custom requirements. Our capabilities include extended resistance ranges, extremely low reactance, low thermal EMF and special configuration.

## computer resistors

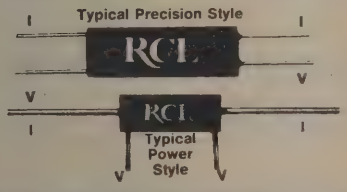
High-density power resistors specifically designed to meet demanding space requirements. Ideal for memory termination. Isolates line drive impulses and terminates lines. RCL engineers can meet all design requirements by adapting nearly any type of configuration.

Particularly suited to very low resistance requirements for interface with integrated circuitry.

POWER RATING: 23 WATTS WHEN MOUNTED ON HEAT SINK MAINTAINED AT 75°C.

**Resistance Range:** From 0.1Ω to 100Ω.
**Tolerances:** 5% standard. Closer tolerances available. Consult factory.
**Dimensions:** .5 x .5 x .062 (Millimeters: 12.7 x 12.7 x 1.6).
**Terminals:** Wire leads.
**T.C.:** ±100 PPM/°C. Closer telarnces available on request.
**Max. Temp.:** (on open side) 125°C.

## 4-terminal resistors



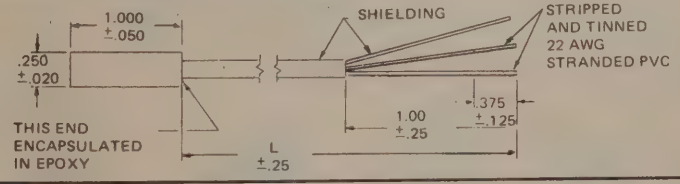
RCL manufactures 4-Terminal Resistor assemblies in both precision and power styles. They are used in current sensing circuits primarily with low resistance values to minimize the effects of lead resistance and lead temperature coefficient. This unique construction is essential for tight tolerance low value resistors where lead material characteristics are critical.

To order, specify "4-Terminal Construction" with any RCL Resistor Series 7000 (Precision Styles) or Series "T" (Power Styles). Consult factory for application details or special packaging configurations.

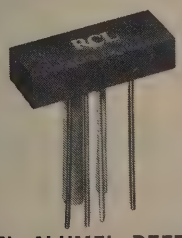
## molded temperature compensators

RCL offers a standard line of epoxy encapsulated sensing resistors for temperature compensating applications. The standard resistance tolerance ±5% with tighter tolerances available on special order. Cable lengths from 2.0" to 48.0" are available with 6.0" standard. Operating temperature range is −55°C to +125°C. Repeatability of temco within a given lot is ±100 PPM.

| RCL Style | Resistance Range | PPM/°C Average Tempco 0° - 100°C |
|---|---|---|
| TC35 | 10Ω - 50KΩ | 3500 ±350 |
| TC45 | 10Ω - 10KΩ | 4500 ±450 |
| TC55 | 10Ω - 5KΩ | 5500 ±550 |

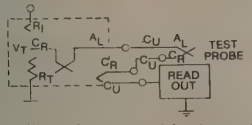


## thermocouple reference junctions



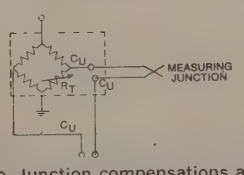
Reference junctions are necessary to make accurate temperature measurements with thermocouples. Ice baths or boiling water are most commonly used in laboratory tests. Since baths are inconvenient and impractical in equipment or field work, several alternate methods are used. RCL engineers and manufactures electronic reference junctions providing stable and accurate reference points for intricate temperature measuring systems.

### A. CHROMEL ALUMEL REFERENCE NETWORK



Configuration A: Typical of a reference junction network for chromel alumel thermocouple. $R_T$ is made with an alloy that varies the $V_T$ exactly opposite to the CR-AL junction establishing a zero voltage effect due to ambient conditions, so that the measuring junction reference is always the initial desired temperature. The read out voltage is proportional to test probe temperature. This eliminates the need of the ice bath reference. Use of copper leads with the network eliminates secondary thermal errors.

### B. BRIDGE REFERENCE JUNCTION



$R_T$ is selected to produce an equal and opposite voltage thermal error due to ambient to the reference junction temperature changes. Output is then proportional to the measuring junction temperature. Junction compensations are practical to .5°C. These methods allow compensation of most common thermocouple junctions.

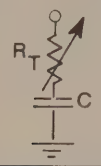
# special products

Included among the many types which have been developed and manufactured by RCL are sensors for use in fuel injection systems, gas turbines, jet engines and industrial air conditioning and heating, and for sensing control of solar energy systems. Shown on these pages are a few examples.

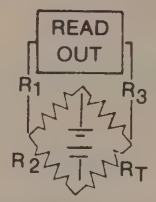
## temperature compensators

Often in sensitive circuits where coils and capacitors are used, the accuracy required is totally overwhelmed by temperature effects and variations. In other applications, temperature sensitive devices are required to measure the actual temperature for input data.

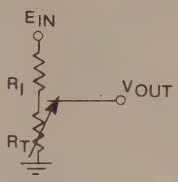
RCL engineers and manufactures temperature compensators to meet this need generally for specific user applications. A, B and C are some typical devices made to fulfill this need.



**B.** Where $R_T$ is selected to compensate for a negative capacitor change vs. temperature so that the Time Constant (RC product) remains the same regardless of ambient temperature. Size in this case is a function of RC value and working voltage.



**A.** Where $R_T$ is made with an alloy which has a specific controlled temperature coefficient to give the desired change in resistance per degree change in temperature. The bridge circuit in this case is supplied with 2 input supply terminals and 2 output or detector terminals in a module 3⁄8″T x 1″L x 1″W.

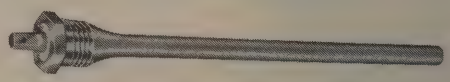


**C.** Where $R_I$ is selected to regulate current and $R_T$ is made with an alloy which will give the desired output level vs. ambient temperature. Size is governed by power dissipation requirements.

## automotive temperature sensor

A typical example of a highly specialized temperature sensor. Operating temperatures −55° to +150°C. TC range is available from 0 to +6000 PPM/°C. This construction is available using all of the special alloys described on page 8.

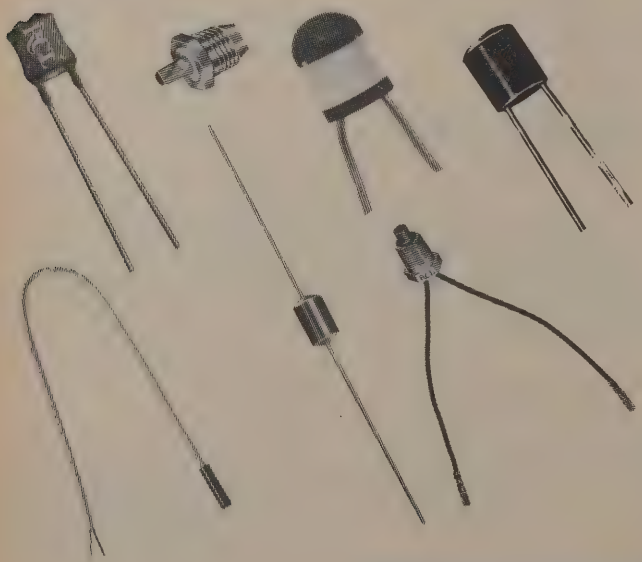
## special high temperature resistance probes



For use at extremely high temperatures and/or high altitudes. Unlimited number of commercial applications.

Maximum operating temperature: 1400°F. Various configurations available to fit specific applications.

## solar control sensors



RCL's "Special Products Division" manufactures a complete line of Temperature Control Sensors. These units have a wide variety of commercial applications, ranging from Solar Heating to Air Conditioning of industrial, commercial, and residential systems. RCL manufactures these Sensors in several configurations, some of which are illustrated below. Our staff of "Special Products" engineers are always available for consultation as to how these Sensors may best meet your specific requirements.

**STANDARD CONFIGURATIONS**

△ **AXIAL LEAD**

△ **PLUG-IN TYPES**
Specifically designed for thermostats and controllers.

△ **VARYING LEADS**
Available with leads from 6″ to 6′. Particularly adaptable for collection and dry storage chambers.

△ **METAL MOUNTED**
Sensors mounted in threaded brass or stainless steel housings. These are particularly adaptable to water storage and swimming pool systems.

**CONSULT FACTORY FOR YOUR SPECIFIC REQUIREMENTS**

Area Code: 312 OLympic 2-7555

Since its inception in 1954, R-OHM Corporation has been dedicated to the task of improving and modernizing manufacturing techniques for metal and carbon film resistors and discrete semiconductors. Today, with specially designed, highly automated assembly lines, we are able to mass produce these products under exceptionally strict quality and reliability controls. Where applicable, devices are manufactured to meet or exceed military specifications. The R-OHM line is recognized throughout the industry for its high level of quality and reliability. Through efficient mass production techniques, we have earned an enviable reputation for service and on-time deliveries at competitive prices. We invite you to join our constantly expanding list of satisfied customers.

# Stackpole Fixed-Composition Resistors

Since the earliest days of radio, Stackpole fixed-compositon resistors have been continually updated and improved. They are among the most reliable and widely used components available for commercial, industrial, and military applications.

Stackpole's commercial-type resistors meet the requirements of MIL-STD-202, Method 208, and our military type far exceeds the stringent requirements of MIL-R-39008. We are qualified by the military to S level of established reliability, which specifies 0.001% failure rate per 1000 hours.

Stackpole resistors are 100% tested, which enables you to cut your inspection costs. Solderability, load life, and humidity-temperature characteristic checks insure constant control of quality. The result is uniformity, plus reliability.

To secure additional information, request Stackpole Bulletin 80-101. Stackpole Carbon Company, Electronic Components Division, Kane, Pa. 16735.
Or telephone: (814) 837-7000.
TWX: 510-695-8404.

## SPECIFICATIONS

| Type | Power at 70° C | Resistance Range | Tolerance | Voltage Rating (RMS) | Maximum Ambient Temperature | Dimensions in Inches (millimeters) | | | |

# Carbon-Film Resistors

Stackpole carbon-film resistors offer reliable performance in both commercial and industrial applications where high stability and uniformity of characteristics are required. Interchangeable in size with composition resistors, they are compatible with commercially available automatic sequencing and insertion equipment.

Stackpole carbon-film resistors are available in bulk package, strip package, cut and formed, and lead reel tape. See our Bulletin 86-101.

STACKPOLE®
the revolutionary resistor people.

# Stackpole Special Purpose Resistors...

Special purpose industrial resistors are used in many applications involving high voltage and/or high energy surges. Resistors spotted at high voltage load points, such as spark plugs, distributor points, or coil leads will limit spurious high frequency signals from being emitted or carried on transmission lines. And large resistors are the perfect answer for use in circuit breakers.

Ceramic resistors with wide ranges of resistance values can be specifically designed to withstand adverse temperature and atmospheric conditions. Where moving contact to the suppression resistor is needed, a carbon-graphite brush type resistor can be used. Electrical connection can be established by means of metallized faces.

Special purpose resistors consist of carbon particles dispersed in a ceramic matrix or thermally cured organic resins containing inert fillers.

**APPLICATIONS:** Circuit Breakers, RFI Suppression, Lightning Arrestors, Heaters, Thermostat Controls, High Power Resistors, RF Termination, Spark Plug, Distributor, Bleeder.

## DESIGN GUIDELINES

1. Submit sketch or drawing of part with space limitations.
2. Describe function of part with resistance required (ohms) and mechanical tolerances (±).
3. Physical size, O.D., I.D., and length with tolerances.
4. Volts, AC and DC; wattage; current.
5. Contacts: Copper, brass or monel metal spray, or attached leads.
6. Lead length and diameter.
7. Operating temperature and maximum temperature; in air, oil or other?
8. Is application steady state or pulse? If pulse, list duty cycle, peak voltage, and peak current.
9. Provide sample of resistor now being used, if any.
10. Describe other engineering parameters such as continuous or intermittent power level, operating temperature requirements, applied voltages or other ambient conditions.

## CERAMIC RESISTORS

Thermally stable, chemically inert, ceramic resistors are suitable for adverse conditions. They withstand high energy dissipation at high temperature and voltage levels such as encountered in high voltage surge equipment, dummy loads, high frequency radiation suppression and other high voltage-power applications.

## ORGANIC RESISTORS

Organically bonded resistors are less expensive alternative for less stringent environments. They offer an inexpensive solution in applications requiring high resistance values where only medium steady state head dissipation is mandatory, or where high energy levels are momentary such as lightning arrestors.

**Specification Data**

| Characteristics | Ceramic Resistors | Organic Resistors |
|---|---|---|
| Maximum Steady State Power Density | 12 watts/in.$^3$ (.75w/cm$^3$) | 10 watts/in.$^3$ (.6w/cm$^3$) |
| Maximum Transient Energy Density | 400 Joules/cm$^3$) in Air or Inert Atmosphere | 100 Joules/in.$^3$) (10 J/cm$^3$) |
| Maximum Voltage Gradient | 10 Kilovolts/in. (4KV/cm) | 8 Kilovolts/in. (3KV/cm) |
| Resistivity Range | 2 ohm-cm. to 10,00 ohm-cm. | 2 ohm-cm. to 200 megohm-cm. |
| Maximum Operating Temperature | 250° C | 120° C |
| Voltage Coefficient | 0.003%/volt max. | .03%/volt max. |
| Temperature Coefficient | −0.13%/° C max. | ± .03%/° C max. |
| Size Range: up to 18" long (45 cm) up to 6" diameter (15 cm) | | |

# UNITED PRICING REPORTS

## the single source that speeds up invoicing, pricing, quoting, purchasing and estimating

Electronic component prices change so fast, you'd need a team of people just to keep up.

United Pricing Reports is the better way. When you subscribe to Pricing Reports you receive 1500 pricing sheets (3000 pages) of the latest prices, as of the date we ship them to you.

This gives you, in a single source, up-to-the minute selling prices on more than 500,000 electronic components.

United Pricing Reports gives you accurate resale prices at the exact moment you need them. Not hours or days later. So it helps you eliminate frantic phone calls, letter writing and catalog scanning to check on prices when you write an invoice or type a purchase order.

## Twice weekly price updates.

One week after you receive your Pricing Reports source book (1500 pricing sheets) you begin receiving twice weekly price updates. You simply take these new price pages and replace the now obsolete pages with them.

The whole process is simple. All information is organized alphabetically by manufacturer. And each manufacturer's price schedule is listed by part number in numerical/alphabetical sequence.

One more thing. When we promise twice weekly updates, we deliver. 52 weeks a year, consistently. Not monthly or every other month. We have a tradition of delivery on our promises, and we're certainly not going to stop now.

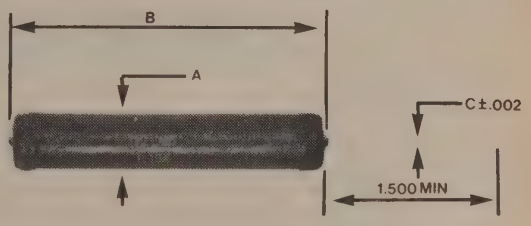
# TYPE VR series

## vitreous power



An essential factor for reliable resistor performance is in the protection that the resistor's enclosure provides to its relatively fragile resistance element.

This protection must withstand the mechanical conditions of handling in use, the thermal effects of the resistor operation under adverse situations and the chemical environments imposed during assembly or life. Additionally, it functions as the medium through which the heat is extracted from the element and dissipated.

A ceramic enclosure affords the ultimate in this type of protection for a wirewound power resistor.

The hard, smooth vitreous surface resists the effects of severe abrasion and rough handling during circuit assembly and through-out life.

Overloads can be sustained without damage to the enclosure because the assembly has already been subjected to red-heat when this coating was applied. There is no attendant flame or burning on severe overload, since there is no organic material to burn.

Both this high temperature capability and the good thermal conductivity of the ceramic material combine to allow higher temperature operation and higher wattage ratings for resistors with this coating as an enclosure. The high heat conductivity of this ceramic in direct contact with the individual turns of the resistance wire provides an excellent transfer of the heat generated in the wire. There is no thermal insulation to cause hot spots.

The inert character of the ceramic coating provides the resistor with a resistance to chemical conditions, which avoids environmental corrosion, and affords solvent resistance during cleaning operations after circuit assembly. The resistor's marking is also an inert ceramic material so that identification is permanent under all conditions.

Same derating as shown on opposite page.

Units are manufactured using stainless steel end caps, all welded construction and high quality resistance wire.

Coating is of high quality silicone to withstand high temperature operation.

Standard tolerances and temperature coefficient as well as specials are available.

Units are supplied with axial leads.

Non-Inductive (Aryton-Perry) specify as "BLN". Maximum resistance (per chart below) would have to be divided by two.

## TYPE EH chassis mount aluminum housed

All welded construction

Special molding compound and process assures positive transfer of heat to the case and mounting chassis.

Resistance ranges — per chart below and lower values upon investigation.

Tolerances — .01% thru 5% — close tolerances on low ohms per application only.

For Non-Inductive, add "N" to style number. Maximum resistance value must be decreased by at least one half of maximum value listed in chart.

Units manufactured to meet or exceed the requirements of MIL-R-18546D.

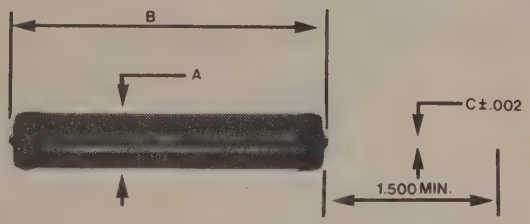
# TYPE EL silicone power



## MEET OR EXCEEDS MIL-R-26

Silicone coated units with axial leads provide maximum power dissipation using the smallest package.

These may be made using standard inductive winding or non-inductive winding. Care must be taken when specifying non-inductive winding as it is possible to achieve only one half the resistance value specified for inductive winding.

A cost savings may be realized as compared to many other precision type units.

Resistance tolerances to 0.05% are available in this series.

## TYPE CR CA CL series

CERAMIC CORE RESISTORS
"CR" Ceramic Radial Leads
"CA" Ceramic Axial Leads
"CL" Ceramic Lugs

Ceramic spool type unit. Windings sealed in varnish. Hole provided for screw mounting. Operate from -65°C to 105°C. Inherently good stability.
Excellent for use under laboratory conditions and most commercial applications.

## TYPE SA epoxy

DESIGNED TO MEET OR EXCEED MILR93D

All units represented may be modified for minimum inductance and capacitive effects at frequencies above the audio range. Rise and decay time characteristics are measured from 10% to 90% of peak pulse amplitude with a 100 kilocycle pulse input.

Temperature coefficients are available to 0 ± 4PPM/°C. and T.C. matches are available to 2PPM/°C.

Stabilities of 0.005% per year are available on a production basis.

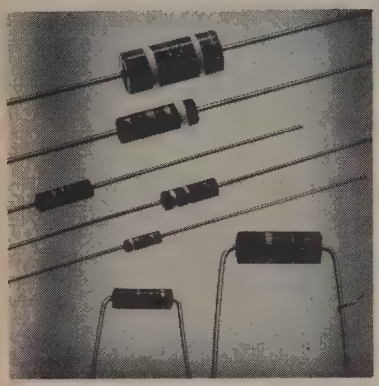
# TRW IRC RESISTORS

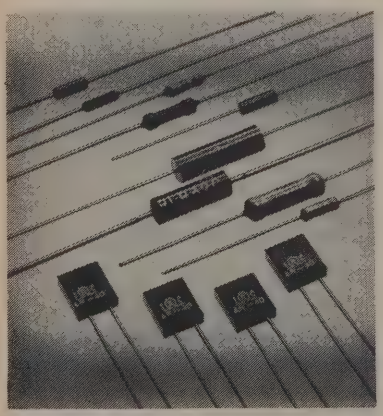
## You get exactly the resistor you need for *your* application.

## No compromises. No "favorites." Just quality.



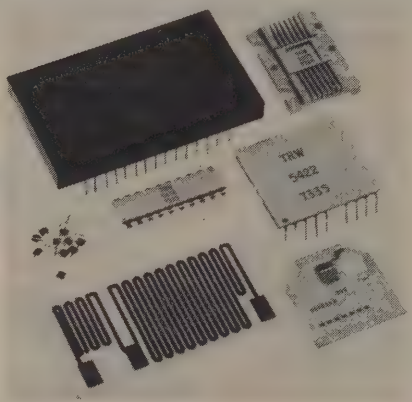
**Carbon comp.**

*Billions* used in consumer, industrial, military applications. TRW/IRC carbon comp. capability ranges from standard commercial types through established reliability RCR's, to ultra-high range ($10^{11}$ ohms). Where you're using carbon comp.'s in automated assembly, TRW/IRC packaging options can help cut the cost of interfacing with your machines. Card packs, lead tape reels, cut and formed leads...we'll be glad to explore the potential economies with you.



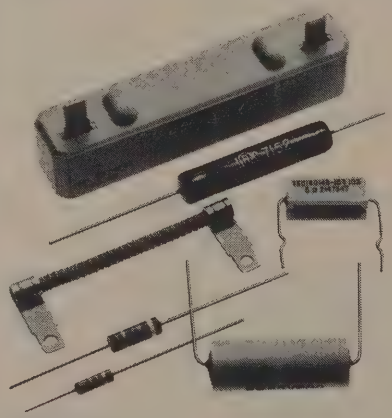
**Metal Film**

TRW/IRC has brought the state of the art in thin-film to a performance level equaling high-stability wirewounds. Capabilities include resistors with tolerances to ± 0.01% and ± 3 PPM T.C. ...high-rel units... precision subminiatures...and, of course the popular RN's. You can also look at alloy films offering high-temperature and high-voltage capability at low cost.



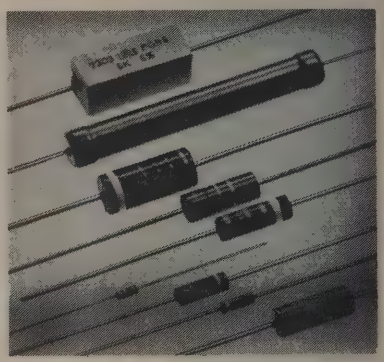
**Resistive Networks**

Advanced resistor technology here. These IC compatible, precision tantalum-film circuits provide inherent low noise, excellent stability, and hermetic performance without hermetic cost. Tolerances from 5% to 0.05% available in custom designs.
TRW/IRC also offers the industry's most complete line of discrete fixed resistors.



**Wirewound**

The line starts with molded wirewound resistors—"space-savers" that bridge the cost-performance gap between composition resistors and precision wirewounds.
It proceeds to standard, non-insulated types for appliance/automotive use...to precision subminiatures offering high power density... to low cost fusible, flameproof units for consumer and industrial applications... to tubular and flat power wirewounds with ratings to 250 W.



**Metal Glaze™**

This is TRW/IRC's thick-film technology—for all types of low power resistor applications. Metal Glaze is widely accepted for its built-in power handling reliability, resistance range, and cost effectiveness. Numerous standard and special designs—precision, semi-precision, flameproof, high-rel, high-voltage.

**All types...all technologies... one source**

To wrap it up, TRW/IRC offers you the most complete line of fixed resistors in the business, with many of the popular types available from one source— your local TRW/IRC distributor. Having a direct pipeline to each of our plants, he can give you fast delivery.

Contact your local TRW sales office for application assistance, custom designs, and special engineering help when you need it. TRW/IRC Resistors, an Electronic Components Division of TRW, Inc. Plants at Boone, N.C., Burlington, Iowa, Corpus Christi, Texas and Philadelphia, Pa. Write TRW/IRC Resistors, 401 N. Broad St., Philadelphia, Pa. 19108. Or call (215) 923-8230.

TRW/IRC RESISTORS

## On the shelf... When you want them. Where you want them.

The TRW/IRC resistors listed in the table below are those usually carried in stock by our distributors. They're the resistors you're most likely to need, or at least, need in a hurry. When you do, chances are your nearby TRW/IRC distributor can fill your order from his shelves. Other parts and styles are available as well, although not always from stock. Ask your distributor, he'll be happy to discuss your special local stock needs with you.

# TRW IRC RESISTORS

## GENERAL PURPOSE MOLDED CARBON COMPOSITION RESISTORS (RC & RCR)

Performance advantages include **strong** lead assemblies. TRW's ribbed shoulder leads are **deeply** imbedded in the molding, defy twisting or pull-out.

TRW leads feature a uniform surface—thanks to an exclusive alloy electroplating process (no hot dipping). You'll find no lumps or voids to degrade solderability.

Moisture protection is another TRW feature. With the element thermally bonded to glass body and embedded in TRW's Selectrez™ mold jacket, you get a more than 50% boost in moisture protection.

TRW carbon comp.'s also offer outstanding high-temperature characteristics.This results from the resistance element's being bonded to the glass substrate at 500°C, plus the internal heat-sinking action of the talon lead construction.

Altogether, these features—plus superior high-frequency characteristics (see facing page)—mean a top quality resistor with outstanding reliability.

**Superior high frequency characteristics**

The best high frequency characteristics in a fixed composition resistor are achieved when the ratio of cross-sectional area to resistor length is minimized. TRW/IRC's element has the smallest cross section and fewest carbon binder contacts of any carbon composition resistors.

The low mass resistance element assures low shunt capacitance and superior performance at high frequencies. In high frequency equipment, this results in better pulse shaping with less broadening and truncation and faster response.

TRW/IRC resistors significantly outperform other brands, as shown on the chart.

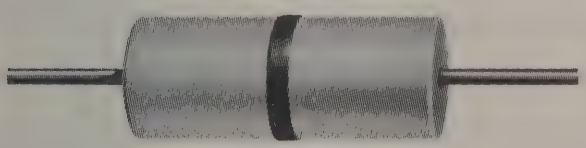
## ZEROHM Molded Jumper Wires



Molded jumper wires or crossovers, as they are sometimes called, are basically interconnection devices between points on a P.C. Board.

Generally they are used for the following reasons:

—Inability to connect two points on a P.C. Board due to other circuit paths which must be crossed over.

—An after-the-fact design change that requires new point connections.

—Circuit tuning by changing point connections.

TRW's molded jumper wires offer a quick simple solution to these problems. They are especially suited for automatic machine insertion on lead tape or available in all packaging styles including pre-cut and formed for manual insertion.

**SPECIFICATIONS**

Maximum resistance .....0.01 Ω

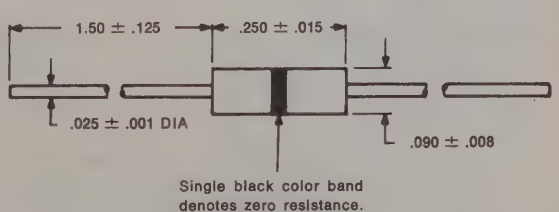
Lead material .....30/70 tin/lead solder-coated copper wire.

Body material .....Electrical grade, high performance, molding compound

Min. Insulation resistance—Dry .....10,000 meg Ω
Wet .....100 meg Ω

Min. Dielectric withstanding voltage
Atmospheric .....500V RMS
Reduced .....325V RMS

Insulation flammability .....Resistor insulation is self extinguishing within 10 seconds after externally applied flame is removed.

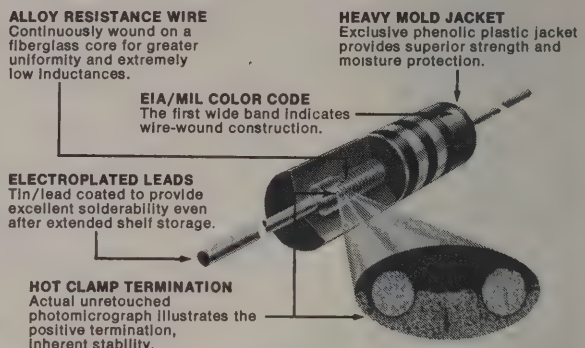


# TRW IRC RESISTORS

## GENERAL PURPOSE WIREWOUND MOLDED RESISTORS

**Type BW-20 (1 Watt) and BWH (2 Watt)**

The TRW/IRC Type BWH bridges the cost-performance gap between composition resistors and premium wirewounds. Its 2 watt rating in 1-watt size lets you replace 2 watt units and save space, or use it in 1 watt space with the advantages of a two-times safety factor and wirewound stability. BW-20s come in six types of packaging to cut assembly costs. They fit ½ watt inserting machines, and can be ordered with a wide variety of cut-and-formed lead configurations.



ALLOY RESISTANCE WIRE
Continuously wound on a fiberglass core for greater uniformity and extremely low inductances.
HEAVY MOLD JACKET
Exclusive phenolic plastic jacket provides superior strength and moisture protection.
EIA/MIL COLOR CODE
The first wide band indicates wire-wound construction.
ELECTROPLATED LEADS
Tin/lead coated to provide excellent solderability even after extended shelf storage.
HOT CLAMP TERMINATION
Actual unretouched photomicrograph illustrates the positive termination, inherent stability.

Patent No. 3,319,210

## BWF FLAMEPROOF FUSIBLE WIREWOUND RESISTOR

The BWF is an economical fusible/flameproof resistor designed to handle ½, 1 and 2 watt applications where dependable circuit and equipment protection is essential.

The BWF has predictable overload *Fusing* Characteristics and is *Flameproof* under fault conditions up to 1000X rated power. (1000V maximum).

Rated at 2 watts and physically a 1 watt size, the BWF provides space savings and is suited for lead forming or automatic insertion equipment on reels of 2000 units. Other packaging styles are available.

Note: BW-20F now available. Rated at 1 watt in ½ watt package for failsafe applications requiring a smaller size than the BWF.

### TRW-BT348 FLAMEPROOF RESISTOR SPECIFICATION HIGHLIGHTS

1. INSTANTANEOUS OVERLOAD

   Overloads from 0 to 15 minutes duration. From 4X to 1000X rated power, (or 1000V, whichever is smaller)
   —No flaming of resistor
   —A paper tissue (Kimwipe #900-S) shall not ignite when resting across or beneath the unit.

2. DYNAMIC OVERLOAD

   Wattage increased at 100% increments of rated power every 2 seconds, (after a 1 minute warmup at rated power).
   —Same as 1 above.

3. CURRENT LIMITING

   Overload applied as in 1. Up to 1000X rated power (or 1000V).
   —Current shall limit to less than 1% of the ohms law value.

4. INSULATION FLAMMABILITY

   Resistor insulation is self extinguishing after externally applied flame is removed.
   —Extinguishes within 10 seconds.
   —Smoking is considered acceptable.

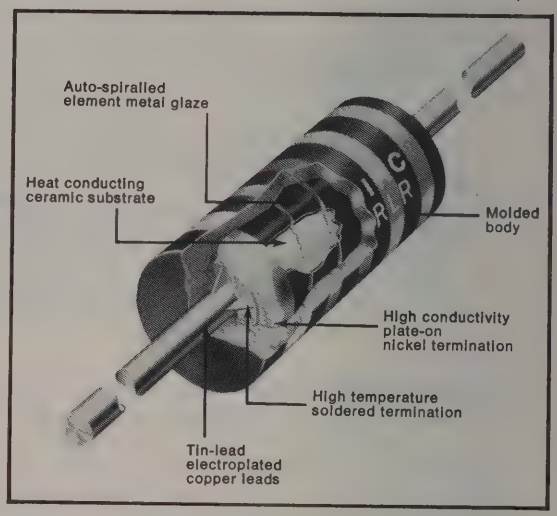
# RG GENERAL PURPOSE SEMI PRECISION AND PRECISION METAL GLAZE™ RESISTORS

Cost effective IRC molded thick film Metal Glaze resistors are designed to provide a combination of ruggedness and performance unmatched anywhere for the price.

The secret is in the proprietary glaze systems, the unique design, and automated production techniques.

Metal Glaze resistors by the billions are in use worldwide, in all types of applications from missile guidance computers to truck anti skid systems, from telephone receivers to process control instrumentation.

Metal Glaze resistors meet or far exceed such MIL specifications as MIL-R-22684(RL), 10509(RN), 39017(RLR), 55182(RNR). Power Load △R's are often less than ±1%, even after 10,000 hours—equivalent to years of equipment life. And these units remain within tolerances even after extended periods of shelf or equipment storage.

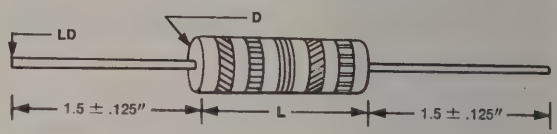


## PRODUCT FEATURES

- **Metal Glaze™ Thick Film Element**—Fused to core at 2000°F—extremely rugged and reliable system—up to 100 times thickness of oxide or evaporated films.
- **Solid Ceramic Substrate**—Provides optimum thermal conductivity—permits maximum power density, lowest T.C. △R's, overload protection, and freedom from mechanical breakage.
- **End-Plated and Soldered Terminals**—Prevents movement, provides excellent electrical and thermal contact. Withstands 20 lb. pull for 5 seconds.
- **Uniform Molded Body**—Best mechanical strength for automated lead forming and insertion equipment.
- **Stability**—Above built-in features provide design tolerances of as low as ±1.5% (depending on purchase tolerance, style, and T.C. selection—see design tolerance discussion, page 6).

**DIMENSIONS—See Table**

**Body Configuration—Molded**



## IDENTIFICATION

Metal Glaze resistors can be provided with color bands or alpha-numeric printing.

## MAR ULTRA PRECISION, NON-INDUCTIVE METAL FILM RESISTORS

**"Where speed and precision count"**

MAR ultra-precision resistors have all of the advantages of evaporated metal film resistors and in addition, precision tolerances to .01% and temperature coefficients to 5 PPM/°C are standard. The inherent low inductance and low capacitance of this design make it ideally suited to high-speed applications requiring a high degree of stability. The rugged epoxy encapsulation provides excellent environmental protection.

Tailored TCs from —100 PPM/°C to +150 PPM/°C are available with TC tolerances to ± 5 PPM/°C.

## AR40 ULTRA-PRECISION METAL FILM RESISTORS

The AR40 ultra-precision metal film resistor is designed to satisfy those critical design requirements where virtually zero temperature coefficient, stability and absolute accuracy are needed. Temperature coefficients of ± 5 PPM/°C and ± 2 PPM/°C are standard. Standard tolerances are available to .01%. The radial lead design and small case size require a minimum of printed circuit board space. Proven end cap termination assures essentially no degradation during normal circuit board insertion practices.

# TRW IRC RESISTORS

## M&C SERIES HIGH STABILITY METAL FILM RESISTORS

Evolved from the industry's original metal film process. These resistors are manufactured to the tightest controls for best performance with respect to low noise, high stability, and the ultimate in TCs and tolerances for precision applications. Standard tolerances and TCs are available to ± 0.1% and ±25 PPM°C respectively. Resistance values are to 100 megohms.

These evaporated metal film resistors will exceed all MIL-R-specification requirements, including the highest reliability level of MIL-R-55182. Voltage coefficient when measured between 1/10 and full rated voltage is typically less than 0.5 PPM/Volt for all values and essentially zero for low and medium values. Typical △ R for long term life is less than .04%.

The design concept of these resistors offer high strength characteristics for potting applications and automatic insertion.
